LIGHT BRAHMAS.

Winners at Chicago, 1907, four firsts, four seconds, two thirds and first pen.

C. P. BROWN, - Colborne, Ont., Canada.**THE DAVIS POULTRY FARM** **ARCHIE DAVIS PROPRIETOR**

Breeder and exhibitor of White Plymouth Rocks, White Holland Turkeys, Embden Geese and Pekin Ducks. Always win wherever shown. At Illinois State Poultry Show, Macomb, Illinois, January 1th to the 12th, 1907, in strong competition, I won three 1sts, three 2ds and three 3d prizes. Stock for sale at all times. Eggs for sale after Feb. 1st; for prices on eggs please write for circular.

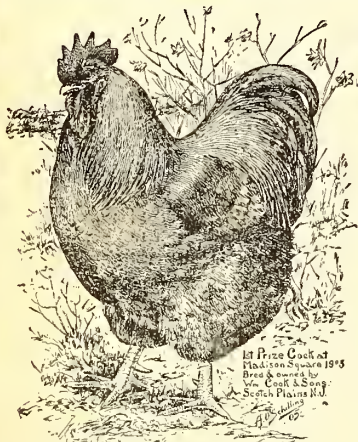

ARCHIE DAVIS, Member of the White P. Rock Club R. R. 1, Tremont, Ill.**Winter Eggs. How To Get Them.**

Are you getting any eggs this winter? If not let us show you where the trouble lies. While you are keeping chickens through the winter you may as well make a profit on them. Our method makes them more than pay for their feed in eggs, even when grain is high and green food scarce. Everybody's chickens lay eggs in warm weather. We show you how to get eggs in winter, even from late hatches—and you can prove it at our expense. You know that some fowls lay eggs all winter. If yours don't, why not find out the reason.

Coop poisoned fowls cannot lay eggs at any time, neither can a sick fowl. With our method fowls are kept absolutely free from lice, colds, roup, diarrhoea and cholera. We have something for coop poisoned flocks, too. We show you how to get weight and size in exhibition poultry, and how to raise all little chicks and turkeys that can be hatched. We can help you, but you must write us first. Send a postal card today. We will send you free receipt by next mail.

CHAS. SCHILD CO. - Box 14, Station C, CLEVELAND, OHIO**The World's Best
BUFF WYANDOTTES.**

At the great Chicago show, 1907, in competition with the best and largest breeders in the country I won first cock, first and fifth hen, 2d and 4th cockerel, first pullet, first pen. Also silver cup for best display and challenge cup for best display Wyandottes in show, all varieties competing.

RALPH W. STURTEVANT, DELAVAN, WIS.**Wm. Cook & Sons**

(Established 1873)

Originators of all the Orpington Fowls**Box A, Scotch Plains, New Jersey**

As usual, we secured another unbeaten show record at Madison Square, 1907, winning twice as many first prizes as any other Orpington breeder. Twenty-one prizes including 10 firsts and six seconds. We have secured 58 first and 41 second prizes in four showings at Madison Square. These facts show we have the best, but that is only natural, as we are their **originators**. We keep all ten varieties. Send for our illustrated catalogue. Free. Containing full history of the Orpingtons.

EGGS from the finest Orpingtons that exist, and our winners, at \$10 a setting; from grand birds \$5.00 a setting. All eggs guaranteed fertile. Stock for sale. Write requirements.

Inspection of our poultry plants cordially invited. Trains met. Advice free.

Editors and Publishers of the Orpington Poultry Journal**BUCKBEE'S SEED AND PLANT
GUIDE FOR 1907,**

which has just come to our desk, is one of the handsomest and most complete that we have ever seen. It is filled from cover to cover with new and standard varieties of everything for the garden, whether it is a home-garden, market-garden, or farm. Not only do they have a complete line of garden seeds, but also have an extensive list of field seeds, flower seeds, plants, and bulbs of all descriptions; poultry supplies, onion sets, small garden machinery, and, in fact, everything in the general seed line that one could possibly want. Their advertisement appears in these columns every season and we advise all of our readers to send for their catalogue and get their seed of BUCKBEE, as we are sure they will have splendid results by so doing.

A. Didricksen, Whitewater, Wis., breeder of Single and Rose Comb Black Minorcas, has made a great record with his stock during the past season. At the late Milwaukee show on Rose Combs he won first cock, first hen, first cockerel, second and third pullet. At Sheboygan, Wis., on three entries he won three firsts. At Oconomowoc, Wis., on Single Combs he won first cockerel, second pullet. At Milwaukee, first hen, first cockerel, first pullet. This record certainly proves that Mr. Didricksen produces the kind of Minorcas that all Minorca fanciers are anxious to get hold of. Better write him at once and mention American Poultry Journal.

Geo. W. Tracey, Kinderhook, N. Y., won as follows, at the late Philadelphia show: On Rhode Island Reds: Second cock; first cockerel (shape special), fourth cockerel (color special); second, fourth and fifth pullet; first pen; also shape and color special on pullets, cup for best display, cup for best pen (nine pens competing), cup for best male and female. Winning every special and cup offered on Single Comb Reds. Also won shape special on a Rose Comb cockerel that was overlooked in the single class. Mr. Tracey has exhibited at all the large eastern shows, including Hagerstown, New York and Boston and has made a good record at all of them.

There are in almost every line of industry in this country a few large companies whose product is recognized universally as superior in quality to similar goods of other makes. The Elkhart Carriage & Harness Manufacturing Company, of Elkhart, Ind., in the carriage industry represents one of these quality manufacturers. They have during the past thirty-four years of their existence built up the largest direct to the consumer carriage and harness business in the world. They make over 200 styles of vehicles and sixty-five styles of harness. Their large catalogue showing complete line is sent free upon request.

F. E. Gilliland, Hope, Ind., the Buff Plymouth Rock breeder, reports that his breeding pens this season are better than ever and that he can furnish eggs in any quantity on short notice, and guarantees to please his customers. Mr. Gilliland has been a breeder and advertiser so long that it is needless for us to tell our readers of the quality of his stock, for they well know he breeds nothing but the best, and his prices are always reasonable. Write him today and mention American Poultry Journal.

The Evangeline Poultry Farm, Birmingham, Mich., wish to announce they have sold their entire stock of S. C. Buff Leghorns to Wick Hathaway, Madison, Ohio, and their entire stock of Houdans to McNeil Blumberg, of Birmingham, Mich. These birds included all their prize winners and a finer lot would be hard to find. They have decided to devote their whole farm to the breeding of R. C. Rhode Island Reds.

A. F. Fawcett, New Albany, Pa., exhibited two of his Buff Rock cockerels at Scranton, Pa., and won fourth, scoring 93, in a very large class. Mr. Fawcett certainly produces good Buff Rocks, and the demand for his stock extends from the Atlantic to the Pacific. When writing him, mention American Poultry Journal.

The Green's Nursery Company, of Rochester, N. Y., have just issued their new catalogue, which contains instructions for planting and growing apples, peaches, pears, plums, strawberries, raspberries, blackberries, grapes and all kinds of hardy fruits. This will be sent free, on application to them, by mentioning American Poultry Journal.

AMERICAN POULTRY JOURNAL'S REMARKABLE SUBSCRIPTION OFFER

If your subscription has expired renew at once so as not to miss the next issue, or, if you are not now a subscriber, we want you for one and make you the following splendid offers: For 50 cents we give you one year's subscription to AMERICAN POULTRY JOURNAL and a set of four beautiful colored pictures of fowls. Or if you secure four subscribers (including your own), we will make you the cut price of 35 cents each.

A subscription to AMERICAN POULTRY JOURNAL this year will mean more than ever before. This year we shall do something no other poultry paper has ever undertaken. Every recognized variety of poultry, ducks, geese and turkeys raised in the United States will appear in AMERICAN POULTRY JOURNAL in colors, nearly 300 specimens. Think for a moment of having so valuable a collection of pictures; it is worth many dollars to every subscriber. We call your attention to our beautiful colored covers.

Remit by money order or stamps (1c stamps preferred). Send at once in order to get all the colored pictures.

A NEW RECRUIT.

A Little Plain Talk to the Buff Wyandotte Breeders.

Two fishermen sat on the bank of a river plying their trade, each with a different bait intended for different species of fish. One fellow was using "live bait" for pickerel, the other "wums" for perch. The "perch" fellow had been doing some good, warm work, with little or no results, while the "pickerel" enthusiast seemed in a fair way to lower the water mark on the river bank from sheer funny displacement.

Matters got a little lukewarm all around, for which reason the "pickerel" hunter got drowsy. The "perch" man, while wide awake, busied himself by replacing bait for the minnows to nibble off. Of a sudden the "perch" man saw a tremendous shaking on the "staked" rod of him of the "pickerel" bait and forthwith awakened him, and witnessed the releasing from the watery deep one more of those fine, large fish. This was enough for the "perch" man. "Say," said he, "you drowse while I fish. You get fish, and I don't. Sell me some of your bait, and wake up yourself, and we'll both have fish."

I think in placing the above before the venerable breeders of the Buff Wyandotte I have expressed the feelings of more men than myself, else I would have left it unsaid.

In order to fish we must have rod, line, hook and bait, although we can fish without either or all of these things, but with what results? To breed good fowls we must first have the fowls, then the "line" on them, then the "hook" (advertising), and last but not least the club, the sole purpose of which is for the good of its particular fowls, and now I am where I "am at," where I started for, and didn't get to until after I got there. The club—If you're sick, you have the doctor come, and come quick, if in business troubles you place your legal matters in the hands of a lawyer, and if you expect to breed good chickens, and have the good of the breed at interest, in order that you may share

some part of their popularity, you join the specialty club and do all you can to push the thing along. (?) Now do you? It cost you a pretty price to get your start in the breed; it takes time and money to propagate them in the way you have of keeping them; you stay right at home with your nose on the grindstone to get them right and keep them right, and finally next winter you go to some big show. (Q.) What's the matter with the Buff Wyandottes? (A.) Why, I don't know, guess they're all right. (Q.) Yes, but I thought I would see a big exhibit here, and I wanted to buy a cockerel, and order a couple sittings of eggs. (A.) Seems to me I have heard that you weren't able to get many members to their club, and the breed was going out a little of late. (Q.) Gee whiz, I have just got a nice flock together, paid out a lot of good money, and now they're all to the bad, eh; why, I was going to join that club myself, but forgot all about it. Now, fellow breeders, that fellow is another pure and simple case of "asleep at the switch" in the best fishing ever, and too many of his kind will hurt the strongest breed extant. Let's get together, and have a grand club, one where we can put in one shekel, and reap a hundred-fold after it has passed through the mill, specials, good catalogue, big membership, your interest and my interest are bound to win more friends and breeders, and don't forget that under the influence of such quality as has been shown during this past winter, that the Buff Wyandotte need lower their comb to no breed extant. Let 'er go, boys; now—all together.

W. S. Crandall.

Middle Falls, N. Y.

MAKE YOUR FOWLS TAME.

Editor American Poultry Journal:

I was much interested in the prize article under the above heading, in your February number. I know how much it means in the successful culture of poultry. I invented and patented a trap-nest several years ago, which I have used ever since, and there is no better way of making your fowls tame than by the use of the trap-nest, which requires that every

hen shall be frequently handled. It is astonishing how soon the hens come to know the owner who handles them, and how pleased they seem to be to be handled and caressed a little. They will talk and sing, just as your correspondent says. I had a hen which did this to perfection, and talked into a graphophone so sweetly that it was a source of endless pleasure to friends to hear her song repeated from the 'phone. I kept her six years until she died of old age, and still we have her voice in the family to remember her by. Many and many a hen will jump on to my arm when I go into the pen with a pan of feed and eat out of the pan while I throw the grain around to the others. Yes, it is an added delight to the chicken crank to be well known to his fowls through the means of the trap-nest handling.

Wallace P. Willett.

The sitting hen, especially in the hot season, seems to be the finest thing in the world for all kinds of destructive lice and mites to prey on, and while there are many known agents for destroying or driving away these pests, their use is hampered by the need of constant application or danger to the fertile egg. I think I have found a way that the hen can incubate her eggs in comfort so far as lice are concerned, and it seems, from several tests, to be alike beneficial to the hen and chicks, and keeps both free from lice and mites.

We set a bantam hen in July and in the nesting material we placed a number of moth balls, such as are commonly used in packing away woollens during the summer months. The nest was so strongly scented that we feared it would have a bad effect on the eggs, but the hatch was as good as it could be, every fertile egg hatching, and a stronger lot of chicks I never saw.

They seemed to eat, work and sleep in absolute comfort and grow at an amazing pace. The smell of the moth balls was strong on chicks and hen, and the hen has taken the chicks to the nest every night since they were hatched. A very close inspection fails to reveal a single louse or mite on either hen or chicks. Why isn't this a pretty good thing?

W. S. Crandall.

GREEN FOOD.

This subject just now is timely, especially as it has such a bearing on our planning for next year's work. We read many articles on the adaptability and value of mangles, cabbages, carrots, etc., as a winter food for fowls, and they are seldom overdrawn, but did anyone of experience ever advocate the use of the common pumpkin for the same pur-

WHITE PLYMOUTH ROCK.

First pullet at Wisconsin State Show and fourth at Chicago. Bred, owned and exhibited by Carl H. Krippene, Oshkosh, Wis.

pose? The latter will grow without extra cultivation, and yields a much larger crop.

Those who use mangles, cabbages, carrots, etc., know that it means a large expenditure of time, muscle and some money to grow a crop large enough to feed five hundred or a thousand head of fowls through the winter. The homely pumpkin will grow in your corn field and yield abundantly without other care than the ordinary cultivation of the corn. Gather them as carefully as you gather your eggs, cut them free of the vines, leaving the stalk. Do not throw them or put your fork into them, but place them carefully in the wagon, put them in a dry cellar, and they will keep your fowls in the best of green food until spring. Split them with a common shovel in six or eight pieces and force them on spikes, as you feed mangles, or split them in half and drop among the litter, or slice off two sides about an inch deep and suspend on a cord or wire.

Any way they get them your fowls will leave a mangle, a cabbage or a carrot for the despised but valuable pumpkin, and their food value for fowls is equal to any of these.

Wm. F. Newell.

LEARNING BY COMPARISON.

In the January issue of the American Poultry Journal, on page 40, is a record of a flock of 150 Brown Leghorns for the year 1905, given by Mrs. Olson, of Oklahoma. Mention is made in the same article of Plymouth Rocks, and for the sake of comparison I would like to see published alongside of hers my record for the year 1906.

I am not a champion of Barred Rocks, my experience being too limited, but I desire to see due credit given every breed. Could we sell our eggs by weight or could we obtain at all times an equitable price for large eggs the Barred Plymouth Rocks would be more

profitable and more popular than at present. The hen which lays eggs weighing 27 or more ounces to the dozen is not to blame because her owner gets no more for them than others do for eggs varying from 18 to 24 ounces per dozen. And she cannot be expected to produce a dozen large eggs from the same amount of feed that some other hen does a dozen small ones.

I am looking for a breed more profitable for eggs than the Barred Rocks without having to take the Leghorn class of fowls. Therefore, at present I have some of three breeds for comparison.

My record needs no further explanation than that at the beginning of the year I had 75 hens and 46 pullets. There were 6 White Wyandottes, 25 pure-bred Barred Rocks and 90 old stock grade Barred Rocks. In March I bought 14 Buff Rocks and sold setting hens from time to time. In August I sold more than half the old hens. The table shows the average number of hens kept per month, also the average number of eggs per hen. In comparing the two records, remember the difference in climate between Oklahoma and Michigan. I have not reached perfection in care and feeding, nor are my buildings as good as I desire.

My Record.

THE GRAND AND NOBLE LIGHT BRAHMA.

There has been much in the poultry journals during the past few years regarding new breeds and pointing out the good points in each, but there has been very little said in regard to one of our oldest and the largest breed of fowls, the Light Brahma. The fact that this breed is the largest and one of the very oldest still stands as a recommendation for them. They are a profitable breed to raise, both for the market breeder as well as the fancier. They develop quickly into broilers and have the weight that brings the best returns. They have a rich yellow skin, and when dressed make one of the nicest carcasses of any breed. There simply is no superior as a table fowl, and we have grave doubts as to their having an equal. To the farmer who raises capons we all know the Light Brahma is without question the breed for him to handle. With good stock and good care you can get Light Brahma capons to weigh fourteen pounds by February. You cannot do this with other breeds. Now, as to their laying qualities, will say they are the equal of any of the larger varieties and their eggs are much larger. The breeders of Light Brahmas have not pushed their favorites by exhibiting and advertising as many other breeders have

done, but they are still a profitable and popular breed, and there is an increased demand for them during the past two or three years over the trade for several years previous. There is a great opening now for all Light Brahma breeders who have strictly choice stock. It behooves all Light Brahma breeders to be careful in mating their breeding yards this spring. Do not breed from inferior birds, and be especially particular about your male birds. There has been much said about the true Brahma type as well as on the color question. We must be careful about the shape or type, and not allow ourselves to run to the Cochins type, as some breeders are doing. For in so doing we not only lose the size, but our true type is gone. The Brahma is not a short-legged bird, but quite to the contrary, having good length to their legs as well as long bodies, with that gentle slope in back to the tail that makes them the ideal shaped bird. We must also be careful to keep width of back and a good full breast. Then, to the color: It is not necessary for us to sacrifice color in maintaining size and shape. It is no more difficult to breed good strong color points on a large, shapely bird than it is on a small bird. Here is where some breeders are greatly in error, as they claim that the best colored birds are always small, but this has not been our experience, and we have bred them for forty years, and there is every reason to expect a continued and vigorous growth in their popularity.

The poultry associations have not lent their encouragement for large exhibits of this breed. Where they have offered any "specials" at all on Light Brahmas they have nearly always been minor prizes, unless offered by some one individual. This should not be the case. Treat all alike and encourage the breed.

WHITE PLYMOUTH ROCK.

First cockerel at Wisconsin State Show; score 95; cut 1½ for broken wing feather; fourth at Chicago. Bred, owned and exhibited by Carl H. Krippene, Oshkosh, Wis.

er of the older varieties the same as the breeder of some new breed.

Let us all look forward to better days for the Light Brahma, the most beautiful and profitable of all breeds, with their fine plumage, which is white with the dark color points. Let us all breed to maintain the size and true shape and at the same time do not disregard color.

Thorntown, Ind. E. J. Barker.

READ WHAT THE USERS SAY. THE POTTER SYSTEM.

From C. H. Rhodes, Prominent Judge
and Breeder.

Thos. F. Potter,

Downer's Grove, Ill.

Dear Sir: After a very thorough trial of your system, I am convinced you have made a discovery that is worth everything you claim for it, and many times the price of the booklet to any breeder. The great problem, how to tell the egg-producing hen, is completely solved in your valuable discovery.

Yours truly,

Topeka, Kan.

C. H. Rhodes.

From W. C. Pierce, Noted Judge and
Editor.

Thos. F. Potter.

Dear Sir: After examining your system of selecting the laying hens, I find that the

covered the key to the secret of how to select the laying hen. Wishing you the greatest measure of success, I remain,
Very truly,

Poultry Judge and Breeder of Barred
Plymouth Rocks.

Is All You Claim for It.

Gentlemen: I received your booklet, "Don't Kill the Laying Hen," some time ago, but have not had a chance until the past week to put it to a practical test and I can now say that it is all you claim for it. A few days ago I sold from a flock of 80 hens 35 which according to your system were poor layers. The day after selling I got more eggs than I had been getting with the whole flock. That's good enough for me, thanks.

Very respectfully yours,

Whippany, N. J.

H. J. Walker.

P. S.—If you have anything else worth about \$100 which you are selling at from

trial. Have been using them now for several years and would not think of even trying to keep poultry without them. They are indispensable to the poultry fraternity. Also let me just add that since learning your system I am thoroughly convinced of its value and find it no trouble now to pick the laying hens from the non-layers.

Yours truly,

Clarksburg, W. Va.

W. H. Clark.

More Than Paid Already.

Dear Sirs: I have followed up the instructions in your hand-book of selecting the laying hen and am more than paid already for the small purchase price of the book.

Yours respectfully,

Chilmark, Mass.

H. S. Habersham.

Advises Poultrymen to Buy Our Book-
let.

Dear Sirs: I received your booklet entitled "Don't Kill the Laying Hen," and

Interior view of Tomlinson Hall, Indianapolis, Ind., during the progress of the most successful exhibition ever held under the auspices of the Fanciers' Association of Indiana.

same is very beneficial to every poultry man, large or small, as it will assist breeders to select the winter layers or the fancy poultry raiser to put only birds that are ready to lay in his breeding yards in the spring. I can recommend the Potter System to the public.

Very truly,

Indianapolis, Ind.

W. C. Pierce.

From One of the Most Noted Poultry
Judges in the United States.

Thos. F. Potter,

Downer's Grove, Ill.

Dear Sir: I am convinced after having seen your discovery of how to select the laying hen demonstrated, that you have a proposition well worth the amount asked to any person who is interested in the least measure in keeping the flock selected for best results as layers. There will no doubt be some who will hesitate under the cloud of doubt thinking it is simply a graft. Nevertheless, in my opinion, you have dis-

25 cents to one dollar, send it along
C. O. D.

Made No Mistake.

T. F. Potter & Co.: I received your little book telling how to save the laying hen. After reading it over carefully I looked over my flock of 125 hens and in less than two hours had found the 55 that were laying. The rest I shipped to market. To show that I made no mistake I got the usual number of eggs the next day. A man keeping 10 hens needs the information contained in your booklet.

Yours very truly,

Milton, N. H.

Geo. S. Proctor.

**POTTER POULTRY HOUSE FIX-
TURES.**

Indispensable to Poultry Fraternity.

Dear Sirs: I want to say that I have given your hennery fixtures a good long

I think it is the best way to detect a hen I ever saw. I have had ten hens, tested them and found one not in laying condition. I killed her and found I was correct. I will advise anyone to invest in your booklet, "Don't Kill the Laying Hen."

Yours truly,

Alton, Ill.

Wm. R. Miessner.

Superior to Anything Else.

Gentlemen: Replying to your favor of the 31st ult., will say, that the hennery apparatus which I bought of you is the best that I have ever had, and I intend to buy more supplies of the same kind in a short time, and will certainly buy them of you as they are superior to anything I have ever tried.

Yours very truly,
St. Louis, Mo.

F. J. Cabor.

Four Complete Outfits in Use.

Dear Sirs: In regard to your fixtures I will say your four outfits that you sold us

are in daily use and I do not think they can be beaten for saving time and labor, as I can clean after my two hundred chickens in about twenty minutes. In fact, I can only say that they are giving entire satisfaction and will want more this spring. Thanking you for past favors, we are,
Yours truly,

East Side Poultry Yards,
Breeder of Thoroughbred Poultry.
LaGrange, Ind.

Four No. 43 Outfits in Use.

Gentlemen: Yours of the 14th inst. received, and in reply would say the four sets of 6-foot triple roosts, sliding nest box henneries outfits you sent us last fall, have proven very satisfactory in every respect. We regard them as the most convenient and sanitary apparatus obtainable. We have placed them in our new building, 7 by 16 feet, four compartments, which is regarded as the most up-to-date in this section. The apparatus we clean daily and sand down with fine beach sand. In this new building we keep our choice White and Buff Wyandottes and Orpingtons. Yours truly,
Springhill, Mass. "The Poplars."

Three No. 43 Outfits in Use.

Gentlemen: I have three complete outfits in use and all I can tell you is that there is nothing in their line that can equal them. They are very complete and neat, the roosts are comfortable and the mite-killing device perfect; the nests are roomy and handy for the attendant and dark enough to suit the hens. Another great advantage is the ease with which they can be cleaned and the neat appearance they give to the hen house. Hoping that every poultry raiser will become acquainted with your goods, I remain,
Yours truly,

Enrique Errazuriz.
North Gaylordsville, Conn.

Four No. 47 Outfits in Use.

Dear Sirs: The henneries fixtures were received all right and I have given time to prove that they are more than you say they are. I have one of the most complete henneries to be found in the state by using your fixtures. I would recommend them to anyone in the chicken business. Words cannot tell as eyes can see the beautiful hen house of the age. It is a pleasure for a lady or a child to manage chickens with your fixtures. Yours respectfully,

Lexington, Ill. Patrick Hanley.

A MACHINE THAT HATCHES AND REARS CHICKS AT ONE OPERATION.

How many times have you wished that you could brood your hatch in the same temperature, ventilation, etc., in which they were hatched for more reasons than one? Haven't you thought the chances for raising a much greater percentage of them would be far better if you were not obliged to transfer them to another atmosphere so different in character from the one in which they were transformed from an egg to a chick? And haven't you felt what a great convenience it would be if you could brood your chicks in the same machine you hatched them?

Well, genius has befriended both you and the innocent little chick. He has invented a machine that serves both purposes—hatching and brooding—and does it well. All you have to do to change it from a hatcher to a brooder is to remove the egg tray.

Presto! it's done and you have as good a hatcher or brooder as any on the market. Just look up the Convertible Incubator Company's half-page advertisement in this issue and read it. Here is a machine that we honestly believe the manufacturers will be unable to supply the demand. We know there are thousands of people who will say "That's just what I want—a machine that I can use as a brooder when the hatch comes off." If you are not ready to put in another setting, simply take out your egg tray and you have a perfect brooder. Again, if you don't want to use it as a brooder, you can continue hatching. It is either a hatcher or a brooder, just as you choose. It's so simple, so practical, that it's a wonder somebody did not think of it long ago. It is a hot water machine of unique construction, fitted with the famous Sheer Automatic Compound Regulator and Acme Burner on the lamp which we have no hesitancy in saying will find a host of friends.

There is no question but what The Convertible will fill a long felt want and prove one of the most popular incubators on the market because of its thorough practicability

ity and general adaptability. It is a machine for the amateur or the expert. Be sure to read the advertisement and send for full particulars, price, etc., to the Convertible Incubator Company, Box C-30, Quincy, Ill.

THE VALUE OF A GOOD BROODER.

It is a good idea to give particular attention to the brooder in which you expect to raise chicks you hatch. A great many people do not give the same consideration to the kind of a brooder they use that they do to the kind of an incubator that they buy. It is comparatively easy to hatch chicks, but rather difficult to raise them. For this reason we think the brooder should have special consideration and anything that can be done to improve it will be a good thing to adopt. Particularly is this true as regards the heating and regulating devices. The right lamp and regulator that will maintain the right conditions of heat and ventilation throughout the hatch, even though they may cost a trifle more than the ordinary kind, will prove far more satisfactory in the end.

In this connection, we wish to call your attention to the brooder fixtures manufactured by the H. M. Sheer Company, Quincy, Ill., and suggest that you send for their catalog. Their advertisement is in this issue.

If your old machine is not working right; does not rear strong, vigorous, healthy chicks; is difficult to regulate and maintain the proper temperature, we would advise putting on an Acme Lamp and Regulator at once. You will find that all the annoyances and troubles you have had with the old lamp and regulator will vanish and there will be a big saving in oil, time and loss of chicks. The lamp holds a gallon of oil, can't be upset; no danger of fire; automatic valve keeps oil always same depth on the wick; which insures uniform flame and steady heat at all times; Combined Damper and Flame Regulation shuts off oil consumption when heat is not needed, and this effects a great saving in oil; the burners are air cooled and cannot overheat; the mineral fibre wicks cannot burn or char and require no trimming. They are so made they can be attached to any make of machine and any one can put them on.

If you are interested in building your own machines you will find in this catalog a complete set of plans for building both incubators and brooders. These are so clearly described and so fully illustrated that anyone can follow them without any trouble.

In writing be sure and mention this paper, and address the H. M. Sheer Company, 102 Hampshire street, Quincy, Ill.

AN ELOQUENT ORDER

which speaks louder than words of the value of Bent's Milk Albumen for poultry, was recently placed by the famous Hartman Stock Farm, of Columbus, Ohio. It was given for a carload of 15 tons and is believed to be the largest order ever placed by a consumer for an animal food. The superiority of Milk Albumen must be marked when purchased in such quantities, and especially when endorsed by the leading experiment stations of several states as the most palatable and healthful animal food, and also when used exclusively by such well known breeders as Hawkins, Latham, Wyckoff, White Leghorn Poultry Yards, Gardner & Dunning, and scores of others. It would seem to be destined to be the coming animal food for fowls.

M. E. Dirk, North Baltimore, Ohio, reports the following winnings on his Buff Wyandottes: At Toledo, Ohio, January 23-28, 1907, in a class of sixty, third cock; first, second, third cockerel; third hen; first and second pullet; first and second pen. At North Baltimore, Ohio, February 8-12, 1907: First and second cockerel; first cock; first, second, third pullet; first, second, third hen; first pen. This is in addition to his recent winning of state cup at Youngstown.

Arthur Trethaway, of Wilkes-Barre, Pa., won at Scranton, Pa., as follows: First cock, first and second hens, first and second cockerels, first and second pullets, first pen, three \$5 gold specials, best male, best female, best pen, challenge cup for best female, exhibited by Tuern or Lackawanna County Exhibition, 300 females competing and all other Minorca specials. New York: First cock, second and fourth cockerels. Stanton, judge. Thirty in Black Minorca class.

Soft Harness

You can make your harness as soft as a glove and as tough as wire by using Eureka Harness Oil. You can lengthen its life—make it last twice as long as it ordinarily would.

EUREKA

Harness Oil

makes old harness like new. Made of pure, heavy-bodied oil, especially prepared to withstand all weathers.

For all axle troubles use **Boston Coach Axle Oil**. Better and more economical than castor oil. Will not gum or corrode. Lasting, reliable, satisfactory. Highest Award, World's Columbian Exposition.

THE LARGEST INCUBATOR PLANT IN THE WORLD OWNED BY AN INCUBATOR COMPANY.

The Cornell Incubator Manufacturing Company, Ithaca, N. Y., purchased last summer the Doolittle estate adjoining the present factory and in order to enable them to have their property in one solid block, the city board of aldermen passed an ordinance closing the street which formerly ran through the incubator ground and

ordered that a new street be laid out on the northern side of the plant. E. G. Wyckoff, the president and a large owner of the stock of this company, certainly means business, for he has just completed four large brick buildings which in addition to the former shops makes the Cornell plant one of the largest—if not the largest—for manufacturing incubators, brooders and poultry supplies in the world. The new main building is in the shape of the letter "L"; it is 358 feet long, 44 feet wide and four stories high and has a total floor space of 55,000 square feet. This building is devoted to the manufacture of Cornell Standard Incubators, Peep-O-Day Brooders and poultry farm appliances. Adjoining the east end of the factory and separated therefrom by a 12-foot platform the incubator company has erected a dry kiln 65 feet long and 34 feet wide, of a drying capacity of 250,000 feet of lumber each month. The machinery was put in by a Boston manufacturer who installed an improved steam hot-blast drying system by means of which the lumber, which is loaded directly from the Lehigh tracks into one end of the kiln, on to specially constructed cars, is slowly moved through the kiln and is completely dry when it reaches the other end in from thirty-six to forty-eight hours. Through a system of turn-tables and tracks the same cars on which the lumber has been originally loaded and put through the kiln are brought into the factory directly to the wood-working machines, thus insuring the greatest economy in handling.

In January last, the incubator people erected a two-story office building of brick, 22 feet wide and 72 feet long. They have now erected a three-story, 26 by 30 feet addition to this building, also of brick. They have installed on the second and third

floors of the new part the filing department, dictating rooms and private offices. The entire first floor of this building is cemented and is used as a pressroom and printing office. The fourth building is also of brick and built immediately on the banks of the Inlet.

The Cornell company has also remodeled its old storehouses, one of which is 115 feet long by 30 feet, and the other 50 by 30

feet. The factory has been equipped with the most improved, up-to-date machinery and they have just put in place a large-size fast-feed planer and matcher, a machine which weighs 13,000 pounds and which will surface on four sides 105 feet of lumber per minute, 6 inches thick and 18 inches wide. They have also put in a large new resaw, a 7-inch machine, and back-knife lathe with a capacity of 2,000 incubator eggs per day, a railway saw for cutting up lumber, and a nailing machine to nail the brooders rapidly and well. In one word, every labor-saving machine not already installed will be provided, to turn out the Cornell chick machinery economically and in a thoroughly workmanlike manner.

The Fort Wayne Electric Works have electrified the entire factory; that is to say, each wood and iron working machine is operated by an individual electric motor of which they have thirty-six, varying from ½ horsepower to 35 horsepower. The initial cost of this system is high, but it will soon pay for itself on account of the economy in operating, as the power is used only when the machine is in operation.

The above improvements were not prompted by whim or fancy, but by the steady and sure growth of the incubator business. Last year's experience taught the Cornell people a lesson; they were sold out of their entire manufactured product in December, before the season had fairly opened, and were behind in their orders during the entire season up to the first of June. They appreciate that this way of doing business is not conducive to good results or to good feeling on the part of their agents and customers, and they have made preparations for this season's business so that practically all orders received will be filled the same day as received.

We recommend readers to write today for their 1907 incubator and brooder catalogue. It is an instructive guide to the poultry business and contains information concerning the valuable features of all the Cornell goods. Obtain the catalogue before placing your order for incubators or brooders. It is free, if you mention this paper.

HERE'S THE BOOK YOU'VE BEEN LOOKING FOR—AND IT'S FREE.

In response to numerous inquiries from subscribers for a reliable book on incubators and chicken raising, we suggest that you send for the Sure Hatch Book.

This is a splendidly illustrated book of 102 pages and gives more practical information than many books that sell for \$1 to \$1.50.

The Sure Hatch Book is so interesting that you'll sit up late to read it. Some poultry books are simply compiled from encyclopedias by men who don't know enough about chickens to set a hen.

The Sure Hatch Book is different. You can tell by the practical way it's written that the man who wrote it dug up his information with the spade of actual experience.

He covers the ground thoroughly. Tells how to make chicken raising pay. His knowledge of incubators and brooders has been gained in building up the world-wide business of the Sure Hatch Incubator Company. Lack of space does not permit us to mention the many subjects fully treated in the book.

Write to the Sure Hatch Incubator Company, Box 6, Fremont, Neb., or Dept. 6, Indianapolis, Ind., and ask for a copy of the Sure Hatch Book. They will send it to you free, postpaid, by return mail.

A. & E. Tarbox, Yorkville, Ill., report the following winnings on their Silver Wyandottes: At Scranton, Pa., January 14-19, 1907—Cock, 5th; hen, 2nd; cockerel, 2nd; pullet, 3rd, 4th; pen, 1. At Tennessee State Show, Nashville, Tenn., January 14-19, 1907—Cock, 3rd; hen, 4th; cockerel, 1st, 3rd, 4th; pullet, 1st, 4th; pen, 1st. Kansas City, Mo., January 15-19, 1907—Cockerel, 1st, 2nd, 4th; pullet, 1st, 2nd, 3rd, 5th. No pen or old birds shown. At Indianapolis, Ind., February 2-8, 1907—Cockerel, 2nd, 3rd, 4th; pullet, 1st, 2nd, 3rd; pen, 1st. No old birds shown.

W. L. Elsea, the Barred Rock specialist of Berryville, Va., won as follows on his Barred Rocks at Washington, D. C., January 22-26, 1907: First cockerel and special for best cockerel, second cock, second hen and second pen. Write him for prices and mention American Poultry Journal.

In a class of some sixty Barred Rocks at the show held at Greenville, Ohio, February 6 to 9, 1907, E. M. Buechly won third cock, tie first cockerel, second cockerel; first, second and fourth hen, two fourth tie pullets, and first pen, and numerous specials.

SOME HEN FIGURES.

Anyone with a liking for statistics may get some glorious facts and figures out of Uncle Sam's annual report on farming operations. It gives a first-class idea of just what we are doing in the way of feeding ourselves—and the rest of the world. No one has a just conception of the immensity of American farm products until he reads such a report. Take the poultry industry—annual production about 45,000,000 crates, or 1,472,043,730 dozens, or 17,664,524,760 individual and separate eggs, worth approximately \$130,000,000. These figures are amazing, yet in spite of this enormous production, it is still a fact that eggs are constantly advancing in price. The hen man needs to wake up to this fact if he aims at the highest possibilities in his business; for until this increasing demand is met and passed, prices are bound to rule higher. This being true, it is manifestly wise to take any and every course that will help production.

No better thing can possibly be done to increase laying than giving a healthy tonic

Poultry Pan-a-ce-a is a mere trifle compared with the great result it brings about. One cent's worth will feed 30 hens a day. Dr. Hess and Clark, of Ashland, Ohio, who prepare it, back Poultry Pan-a-ce-a with a written guarantee, so there is no risk in trying it. It is abundantly proved that if you use it as directed and occasionally sprinkle hens, roosts and nests with Instant Louse Killer, your flock will be free from disease and uniformly profitable.

ORDERING GOODS BY MAIL.

The C. E. Murbach's Company's mutual coöperative plan is a household economy—\$20 of retail value for \$10 and how it is done. The easiest way to trade has been the subject of much thought and endeavor to the commercial world in recent years.

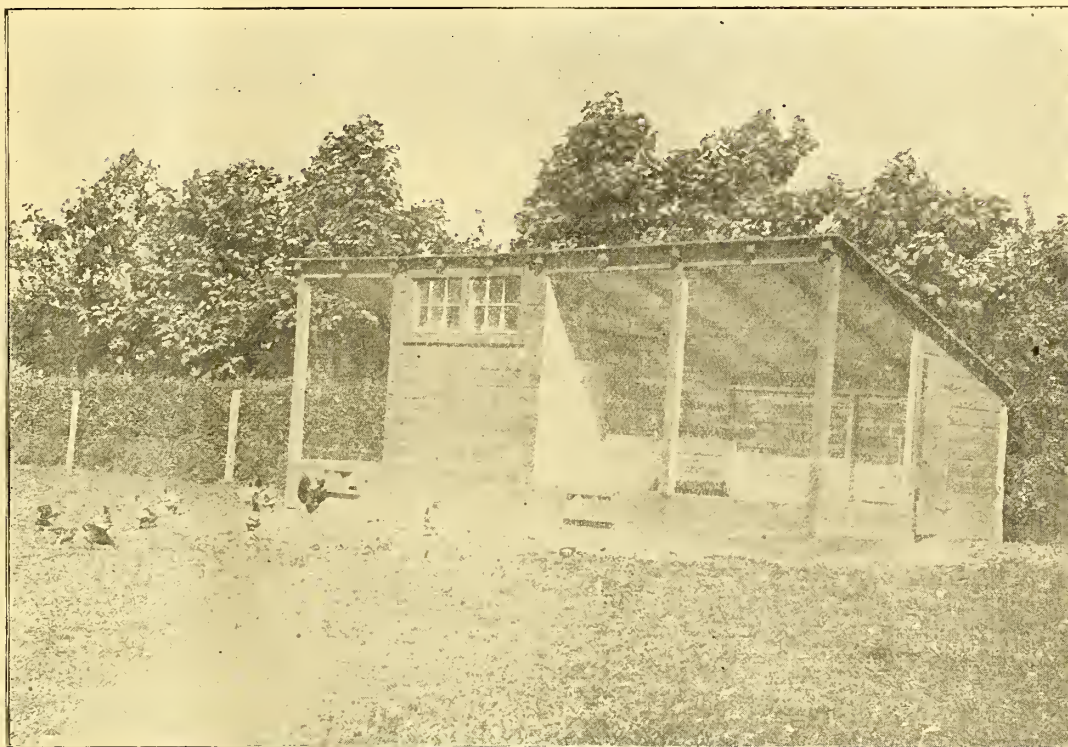

The mail order business—factory to consumer plan—the C. E. Murbach way—is a trade development of recent years, that has shown remarkable growth. Its aim is to place the buyer in the country or in the small town on the same plane with the large city buyer. This success could not

the home way of dealing must surely explain to you how easy it is for us to give superior groceries and other products and premiums to our patrons. It is not necessary for you to accept our word in the matter, however, as our 30-day free trial offer is open to every family, and you do not have to pay one cent unless you are fully satisfied and convinced that you have received more for your money than you could have done elsewhere. Send for our large 124-page catalogue, which contains over 1,200 handsome and useful premiums. Address The C. E. Murbach Company, 62-64 Plymouth place, Chicago, Ill.

WHITE ROCKS THAT PLEASE.

Kasson, Minn., February 11, 1907.
Victor D. Caneday, Box A, Taylors Falls, Minn.

Dear Sir:—I wish to thank you very much for the extra fine White Plymouth Rock bird you sold me, a bird that would cost three or four times the price I paid you for him. Could people see your stock and meet you personally you could not

One of the many poultry houses on the farm of Walter Sherman, Newport, R. I. Mr. Sherman makes a specialty of utility stock of the following varieties: Rose and Single Comb Rhode Island Reds, White and Barred Plymouth Rocks, White Wyandottes, Light Brahmas and Pekin Ducks. Nothing but extra good layers and stock of strong vitality kept on this farm.

in regular daily doses. All hens, and young chicks as well, need just this help in order to produce the most, or make satisfactory growth. Nothing better for the purpose can be found than Dr. Hess Poultry Pan-a-ce-a. Thousands of successful poultrymen from all parts of the country testify to the wonderful value of this tonic. Dr. Hess (M.D., D.V.S.) has for years studied every possible condition which may exist in poultry culture, and has given the world his Poultry Pan-a-ce-a as a result. For those who do not know about this tonic let me say, it does not force egg production by exciting or stimulating the fowl unnaturally. Instead, it makes digestion in the hen an easy and natural process, so that every grain or spoonful of mash eaten either makes eggs or flesh as Nature intended, and in the largest possible amount.

Those who use Dr. Hess Poultry Pan-a-ce-a tell us that it does positively cure and prevent disease. No flock can be sickly where it is used, because it makes the red blood which Nature requires for health, and also the necessary nitrates to carry off poisonous matter from the hen's system. By the use of this wonderful tonic, chicks are matured much earlier than would otherwise be the case; and pullets come into laying when eggs are highest and continue profitable the entire season. The cost of

have been attained except by following the principle of honest and courteous dealing. The high standard of integrity maintained by up-to-date, reputable mail order houses and the almost perfect security of the modern United States mail service, together with the rapid development of the rural free delivery system, has made it possible to trade by letter with complete satisfaction and safety.

By dealing direct with the manufacturer, through the mail order system, all the expense connected with high salaried salesmen, wholesalers and retailers, is done away with, and for that reason prices can be made to the outside buyer lower than can be made to the city purchaser who buys at retail in the big stores, where numberless comforts and conveniences have been installed to make shopping attractive.

We make absolutely no pretense of giving you something for nothing. The C. E. Murbach Company way merely saves you in the shape of an attractive and useful premium half the cost of the finest teas, coffees, soaps, toilet articles, pharmaceutical supplies, etc., etc., that can be purchased by eliminating from the transaction the services and profits of the convenient but wholly unnecessary middleman.

The C. E. Murbach Company factory to

raise fowls enough to supply the demand. It is a pleasure to meet and do business with such a man as you are. The White Rock cock bird I bought of you won first prize at both the Minneapolis and St. Paul shows this winter and was easily worth \$100. To say I am pleased is putting it mildly; you can use this anywhere you wish, as I am willing to give you credit for such dealing.

Yours truly,

H. M. Sorenson.

Wm. Neires, proprietor of Cascade Poultry Yards, Cascade, Iowa, won at Mississippi Valley Poultry Association, held at Dubuque, Iowa, January 14 to 19, 1907, on Silver Laced Wyandottes, first and second hen, first and third pullet and first pen. Those prizes were won against strong competitors. Birds from three states were shown and the official scorer, D. J. Lambert, of Apponaug, R. I., says the exhibit was one of the highest grade he was ever called upon to judge.

C. E. Spaulgh, Rugby, Ind., has several pens mated up for the egg season, every pen containing a prize winner. Anyone interested in Barred Rocks should write for circular. Mention American Poultry Journal.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** is furnished every advertiser during the time his ad is running. **Sixty thousand per month.** We guarantee an average monthly circulation of 60,000 copies of **AMERICAN POULTRY JOURNAL.** When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention **A. P. J.** It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

"DUKE OF KENT" STRAIN of S. C. Black Orpingtons. No strain of Black Orpingtons in the world state higher. Season, 1907. There isn't a state in the Union where, in the shows of the present winter, a splendid list of first prizes have not been carried off by cockerels and pullets hatched from eggs shipped from my yards last year. One customer writes: "I got three cockerels out of the setting, and this week, in hot company, I took first, second and third prizes at our big show. The judge said the first prize bird was the best Orpington he had ever handled." Eggs now ready; \$4 for 13; \$7.50 for 26. You cannot get any higher grade eggs, even at \$10 per setting. Last year I could not supply half my orders. Fifty prize winning cockerels for sale at \$10; others cheaper. Write postal for chrono of "Duke of Kent." Sent free. D. N. Foster, Ft. Wayne, Ind., State Vice President of American Orpington 2-3

What a Lucky Man Got Last Year

\$100.00 Cash in American Poultry Journal's Subscription Contest

(H'GAG 2, ILL. JUN 27 1906 190 No 7398)

The First National Bank of Chicago

PAY TO THE ORDER OF

S. M. Yoder \$100.00

One hundred and no/100 DOLLARS

AMERICAN POULTRY JOURNAL PUB. CO.

Geo. S. Yates Pres.

87 Hubbard Bldg. Chicago

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sets on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize. Wishing you and the Journal success, I remain Very truly yours, S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

you can get premiums worth another \$100 or more, and you have your choice of 100 different premiums.

All Who Send Us Five Subscriptions

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

J. A. BICKERDIKE, The Trap Nest Man Box A, MILLERSVILLE, ILL

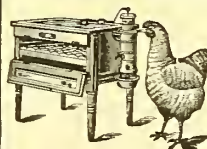

200 Chicks Like This

will soon develop into two-pound broilers worth \$60 in any market, or will form the nucleus for a large poultry farm. Any man or woman can make good money the year round raising poultry. It's just a question of getting started. You don't need expensive grounds or buildings.

A warm cellar or garret—a little patch of ground and

THE Wooden Hen

\$12.80

is all that you need to begin with. This 200-egg incubator will more than pay for itself with the first hatch. The wooden hen costs much less and is better than dozens of high-priced hatchers. *It will hatch every fertile egg.* Write for free catalogue and full information regarding the care and growth of incubator chicks.

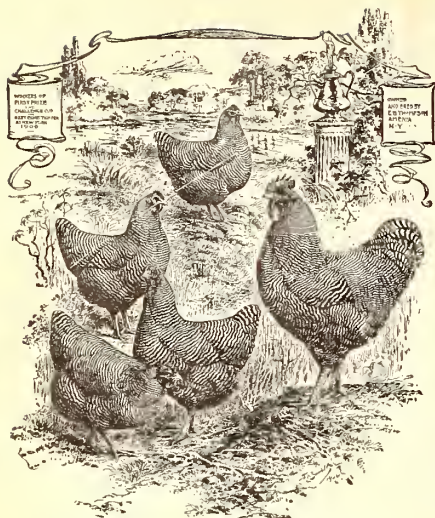

GEO. H. STAHL, Quincy, Ill.

MONEY PLANTED WITH ME GROWS

You can buy baby chicks for less money than good eggs cost. Leghorns, White and Brown; Rocks, White and Barred; Wyandottes, White; Minorcas, Black. Send for circular.

The Ohio Hatchery & Mfg. Co. Box 30, Bellevue, Ohio

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, COLUMBIAN, WHITE, SILVER, BUFF.

ORPINGTONS

1907 CHICAGO WINNERS

We won on S. C. Buffs 1st, 2d cock, 2d, 3d kcl., 2d, 3d pul., 2d, 3d hen, 1st pen, silver cup best display, silver cup best colored male, silver cup best colored female; all firsts on R. C. Buffs. On our S. & R. C. Blacks and Whites we won 10 firsts and 8 seconds. 1907 egg circular free.

J. M. WILLIAMS & CO.

Box B, No. Adams, Michigan

World's Foremost White Wyandottes

Have won more prizes at New York and World's Fair and other leading shows the past twelve years than any one breeder. My customers have done as well. Eggs from the best \$5 per sitting, three sittings \$10. Stock shipped on approval. I am breeding Columbian Wyandottes under same lines as White Wyandottes, from only very best.

J. H. JACKSON, Lock Box 88, Hudson, Mass.

ROYAL BUFF ORPINGTONS

at the great Auburn Show won 3d cock, 1st hen, 1st and 2d kcls., 5th pullet, 1st pen and silver cup for best display; also several minor specials. Every bird shown bred by myself. Breeding stock for sale. Eggs \$3 per fifteen.

CHAS. BENINGTON, Edmeston, N. Y.

America's Best Wyandottes in Golden, Silver, White and Black

They lead all others, having won for me more than 300 premiums at Madison Square Garden, 37 premiums at St. Louis World's Fair, 57 premiums at Chicago on 88 entries. No breeder holds such an extensive prize record as I do. They have won at nearly all the large shows for our customers during the past 20 years. There is no strain so well established in the world as the Keller Strain. Our matings were never so fine as this year, one setting for \$3, two for \$5, or \$18 per 100. I have several hundred imported Scotch Collie dogs Berkshire hogs and Golden Sebright Bantams.

IRA G. KELLER, Brookside Farm, Box 75, Prospect, O.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1902. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

GUARANTEED
BEST HATCHER

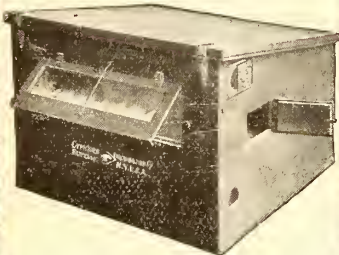

240 and 390-Egg Standard Incubator (made in two sizes) possessing every patented improvement including chick drawers and drop-bottom.

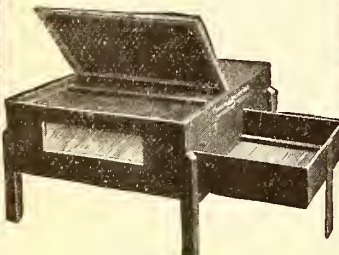

Cyphers Self-Regulating Combination Colony Coop and Outdoor Brooder, 6 ft. x 3 ft. Heat automatically regulated as in an incubator.

Cyphers Unequalled Style A Outdoor Brooder, 6 ft. x 3 ft. Superior light and ventilation. Larger and better even than last year's well-known type.

Cyphers Storm King Outdoor Brooder, 3 ft. x 3 ft. Just as good but smaller.

Cyphers Improved Hygienic Indoor Brooder and Chick Run, 3 ft. 6 in. x 2 ft. 8 in. Diffusive ventilation, double diaphragm roof. Patented principle.

CYPHERS INCUBATOR COMPANY MANUFACTURERS OF INCUBATORS BROODERS ETC. EVERYTHING FOR POULTRY-KEEPERS

A Guaranteed Down-To-Date Brooder And A Guaranteed World's Best Incubator

Just as we guarantee our incubators to Hatch Larger, Stronger, Healthier and More Chicks or Ducklings than any other make, because we have evidence in the shape of hundreds of letters from users, so have we the evidence that our Brooders Will Raise More and Stronger Chicks than other makes.

Cyphers Company Brooders are made with the same fidelity to our customers' interests as are our Latest Pattern Standard Cyphers Incubators. We offer no cheaply-built brooders of any kind. The Brooders illustrated are all of the same high quality. They are fit companions for our "World's Best Hatcher." We offer them to our customers—to the best friends of the Company—without hesitancy as being the best device for the purpose manufactured to date. Send for our big catalogue (260 illustrated pages free) and read the many letters like the following from well-known people:

"We are highly pleased with the brooder purchased of you last February. Shortly after we received your brooder we received an advertisement from _____, and as my husband liked the looks of the brooder advertised he ordered one. To prove the superiority of the two brooders my husband took the one ordered from the advertisement and I took yours. We put the same number of pure bred Plymouth Rocks in each brooder, side by side, and gave same attention, feed, etc., to each lot of chicks. My brooder (the Cyphers) raised 40 more than his. I may also say that his brooder smoked very badly, and did not keep the heat nearly so regular and uniform, sometimes varying from two to ten degrees where mine kept steadfast. After giving his brooder several trials, my husband said, 'Yours is far superior in many ways, and if we purchase any more they will be the Cyphers.'"

MRS. O. B. CARL, Franklin Tenn.

Having Hatched Your Chicks Right Don't Lose Them By Poor Brooding

Many a chick dies after having been well hatched simply on account of being raised in a poor brooder—poorly regulated, poorly ventilated, in sufficient light, too hot or too cold. It comes expensive to hatch chicks right and then lose them in the brooding.

Before you decide which brooder or incubator you will buy you can save money, save time and avoid worry by giving a thought to the following facts:

1. Cyphers Incubators and Brooders are used and recommended by more Government Experiment Stations in America than all other makes combined. Why?
2. Cyphers Incubators and Brooders are used and recommended by over twenty Government Experiment Stations in foreign lands. Why?

3. Cyphers Incubators and Brooders are used and recommended by more Large Commercial Poultry Plants than all other makes combined. Why?

4. Cyphers Incubators and Brooders are used by more Fanciers of National Reputation—winners at the biggest shows—than all other makes combined. Why?

5. Cyphers Incubators and Brooders won the Gold Medals at the leading World's Fairs and Expositions. Why?

Because They Have Year After Year Proved Successful In Actual Use

OUR STANDARD INCUBATOR GUARANTEE

1. That if our incubators are not found to be as represented by us or shall not do the work claimed for them, they may be returned at any time within 90 days of the date of purchase and if in good condition, less reasonable wear, we will immediately refund the price paid for same.

2. That they will produce larger, stronger and healthier chicks and ducklings and bring out a larger average percentage of the fertile eggs than any other style of incubator.

3. Our Big Free Catalogue Contains Seven Other Guarantees on our Incubators and Brooders.

When You Buy a Cyphers Incubator You Buy A Sure Thing They Have Stood The Test Of Years

Do you know that Cyphers Incubator Company operates the Largest Manufactory of Poultry Supplies in the World? It will appeal to your reasoning that with superior facilities and machinery they make better and cheaper goods. There is, too, always the opportunity to send back any article that is not as represented. Our motto is—"Quality First—The Price as Low as We Can Make It."

A Remarkable Book About

Incubators

The man who perfected the Racine Incubator is the oldest man in the business. He has spent 25 years on nothing but incubators. Since 1881 he has been constantly testing ideas of his own and others. He has conducted a hatchery, and has made hundreds of tests with different incubators in actual use there.

In this way he has learned more than any other man knows about incubators; and he has now put all the facts in a bright readable, interesting book. It tells the secret of success in a fascinating, convincing way. To the man who seeks an incubator, it is by far the best book of the year.

And it tells, too, how the Racine Incubators and Brooders have been developed by a lifetime of patient study. It shows the Racines as they are to-day. You will want this man's machine when you read his book. The book is free—write today for it. Remember that We Prepay the Freight to any point in the U. S.

Racine Hatcher Co., Box 26, Racine, Wis.

We have Warehouses at Detroit, Mich., Buffalo, N. Y., Kansas City, Mo. and St. Paul, Minn.

South Side Poultry Farm is the home of the celebrated PURITY STRAIN

S. C. W. LEGHORNS

one of the greatest laying and winning strains on earth, as we can prove by records. This strain has won in a number of the best shows in the hands of my customers. Pullets from Purity Strain in the hands of my customers have been placed side by side with some of the most noted strains, and beat them every time. Stock of both sexes for sale at all times. Satisfaction positively guaranteed. Eggs, after Feb. 1st.: \$2.50 to \$3 per 15; \$8 per 100.

JOS. A. BURKHART

Box 55, SMITHSBURG, MD.

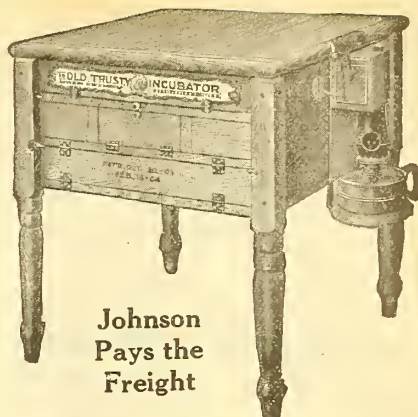

Arnold's Columbian Wyandottes

Have repeated their record of 1906 at the Madison Square Garden Show of 1907, and won more regular and special prizes than any of our competitors. In a class of 155 of the best Columbian Wyandottes ever seen at one show, and exhibited by 22 of the leading breeders of the East, we won the Club's Championship Cup for best collection, President's Cup for best cock, hen, cockerel and pullet, President's Cup for male with best hackle, President's Cup for female with best wing, special for 4 best cocks, special for 4 best cockerels, also winning two out of five firsts. A fine lot of birds for sale at right prices. Eggs from the best matings we ever had, \$10 and \$5 per 15. Be wise and order early.

AUG. D. ARNOLD

Box 777, DILLSBURG, PA.

Let me send you an Old Trusty
 —on 40, 60 or 90 days' trial
 —with a 5 years' guaranty
 —freight prepaid by me
 —you to be the judge of its work.

Johnson
Pays the
Freight

MORE Old Trusty Incubators and Brooders were sold last year than of any other one kind on earth.

They were sold on a free trial and a positive guaranty,

—and they *stayed sold!*

Now why? The nearly 40,000 chicken raisers who bought 'em had their eyes open and knew they didn't have to keep them unless they wanted to.

They kept them because Old Trusty

- is better built
- needs less attention
- hatches larger per cents
- and is the most economical incubator that you can find in this big, wide world.
- takes less oil
- produces stronger chicks
- is sold on a fairer plan

The 40,000 people who bought Old Trusty last season found that they did *better work* than other incubators in the same neighborhood.

Of course I'm not foolish enough to try to make you think that you'll have to drop the chicken business if you buy some other incubator, but I *do* say that I can prove to you that Old Trusty—and say, the machine deserves that name—Old Trusty

Isn't that the kind of incubator *you* are looking for?

Johnson
Pays the
Freight

Old Trusty
Incubators
and Brooders

5-Year
Guaranty

are built on Experience—not theory. That's the Reason.

I believe I've *started* more folks to raising chickens by incubators than any other living man.

I've been at it for more than 14 years.

I've built thousands and thousands of incubators and a great big percentage of them have gone into the hands of *beginners*.

They *had* to be automatic and self-regulating—practically run themselves—or their users would have failed.

It has been my hobby to build the most automatic incubator in the world—and to build it as good as I know how.

That's why I kept on experimenting until I perfected the Old Trusty patent copper-pipe heating system—the *only* heating system that gives a perfectly even radiation of heat to all parts of the egg chamber.

That's why I perfected the double *connected* water, direct-action regulator which is so perfect that Old Trusty could be run *without* a *thermometer* if you wanted to. This trustworthy Old Trusty regulator is *within* the egg chamber and *out* of the way. It is counter-balanced within itself and never needs re-adjusting. It is attached and connected when shipped.

Old Trusty has a patented jacket around the boiler that saves from 15% to 50% of the oil.

Old Trusty is made of California redwood, with double walls throughout, with dead-air space between—matched and joined like a piece of furniture and not a crack or knot in the entire incubator. And it holds the heat better than any other wood ever used for an incubator.

But, this isn't the place to describe all the good points of Old Trusty. The best way to find out about them is to get the machine on trial and compare it with others:

—Compare the materials used in them—compare the way they are made—compare their durability—compare their heating systems—compare their regulators—compare their percentages of hatches—compare the strength and liveliness of the chicks they hatch—compare their economy of oil—compare their ease of operation and you will decide, just as thousands and thousands of chicken raisers have decided in years past, to put your trust in Old Trusty.

We can fill your order promptly this year. Our big factory helps us keep up with orders.

At any rate

Send for Johnson's Free Book

It's bigger and better than ever. More good pictures—most of them of chickens and chicken raisers who know and love Old Trusty. It's chock-full of good, common sense chicken talk, founded on experience, which, after all, is the *only* kind of "scientific hatching" that's worth paying any attention to.

It tells all about Old Trusty and the most liberal trial plan ever given an incubator.

If you raise chickens or are thinking of raising chickens, you ought to have this book.

And all it costs you is just the asking for it. Let me send you one. What do you say?

PINELAND INCUBATORS AND BROODERS

"94 chicks from 100 eggs." John Burroughs, Pemberton, N. J. did it with a Pineland. "If I needed 100 incubators," he says, "I would buy only the Pineland." That's just one only of scores of equally good hatches. Our guarantee securely protects you from disappointment or loss. Free catalog. Agents wanted. Pineland Incubator Co. Box W, Jamesburg, N. J.

20 YEARS SUCCESS

LOOK FOR THE FLAG

When you buy a thermometer, no matter what kind of an incubator you have, to get the largest possible hatch, the eggs must be kept at the right temperature 103°. An absolutely accurate thermometer is vital. They won't stay accurate unless seasoned, which adds considerably to the cost.

Taylor Thermometers

are as accurate as thorough seasoning and careful testing and re-testing can make them. The white graduation on the black frame makes reading easy even in a dim light. An arrow emphasizes the 103°. Send 75c. for a Taylor Incubator Thermometer (prepaid). The saving on fertile eggs will pay for it over and over.

Taylor Brothers Company, Rochester, N. Y.

Why Don't You Build Your Own Incubators and Brooders

Thousands Are Doing It. Send For Our **FREE PLANS** and See How Easy and Simple they are. We Furnish Parts not Possible for You to Make

The first thing that occurs to many who read our advertisements, is that it is impossible for them to build their own machines.

If you think so, you're mistaken. You can build your own machines with our plans and fixtures, and do it easily.

Over eighteen thousand people were interested in building their own incubators and brooders from our plans last year.

No special experience or tools required. We've worked and studied on these plans and fixtures until we have made them so simple and easy to understand that anyone, even a girl or boy can follow them.

Remember, we furnish all the parts not possible for you to make, such as Lamp, Tank, Regulator, Doors, Legs, Hardware, etc., at a special low cost. That's why it's so easy. Now just to convince yourself that you can make a better incubator than you can buy, one that will have exclusive features especially advantageous to the inexperienced operator, send for these Free Plans and if they fail to satisfy you, we'll say no more.

All it costs is a mere request; they're free

post-paid. If you already have an incubator or brooder, our catalog will be valuable to you.

It tells how you can cut your operating expenses in half and save a lot of time, labor and annoyance, by using our Improved Acme Automatic Lamp and Acme Compound Wafer Regulator on your old machine.

Here's some of the reasons in brief: Lamp holds over gallon; can't be upset; no danger of fire. Combined Damper and Flame Regulation shuts off oil consumption when heat is not needed.

Automatic Valve keeps oil always same depth on wick, insuring uniform flame—steady heat. Mineral Fibre Wicks don't burn nor char—saves trimming.

Burners are air-cooled; can't overheat, explode nor cause fire.

Acme Compound Wafer Regulators are positive in action, accurate to fraction of degree.

Both Lamp and Regulator made to fit any machine—anyone can attach them. More reasons in catalog. Send for it and learn how to save one-half the time, labor, expense and get better hatches with your old machines.

HOW'S THIS

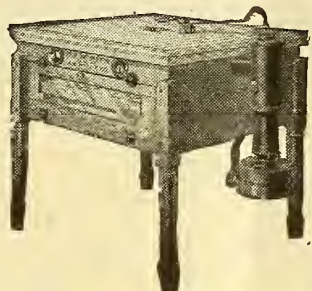

Pine Bluff, Ark., Sept. 8th, '06
H. M. Sheer Co., Quincy, Ill.

Gentlemen—The machine showing the 35 per cent. hatch above, was operated by a boy thirteen years old, who really did not know a goose egg from a duck egg, and his experience was equally limited when he began operating the machine. This we think proves its capabilities. The lamp does excellent work, and the Regulator is the best I have used. D. W. BOYCE. In writing for Catalog and Free Plans, address

GOLD IN THE GRIT BAG

Here is what the miner would call "pay dirt" for it will put money in the poultryman's pocket. It's nature's own product made from the natural rock and ground to the proper sizes for feeding all kinds of poultry.

LOPEZ GRIT

contains valuable mineral properties which enter into the fowl's system and assist the digestive and egg-making organs in the production of eggs and vigorous growth. Turkeys, ducks, chickens, geese, little chicks and pigeons thrive on it. It's a most economical and profitable grit; just what you are looking for, 50 and 100 lb. bags. Car load lots if desired. Send for free sample. Agents wanted.

LOPEZ SANDSTONE CO., Box B, Wilkes Barre, Pa.

WRITE TO US BEFORE YOU BUY AN INCUBATOR**We Can Save You Money**

The lumber, copper and fittings we are putting into our machines this season we bought one year, two years or three years ago, before the present high prices. We do by machinery what others do by hand labor. The result is a lower price to you for the same quality of machine. ¶ We use seasoned lumber, we put heavy copper into our tanks and boilers. We build carefully—our doors fit and close tightly, our lamps burn clear and bright, our regulator keeps the temperature at 103 degrees. When you get the Victor you get machines that will hatch and raise chicks.

Let Us Send You "The Victor Book"

which tells why Ertel machines make most money for their owners. You owe it to your own pocket to find out what our machines can do for you. ¶ Just say on a postal "Send Victor Book" and if you have made up your mind the size machine you want, ask us for special prices.

40 Years in Business

GEO. ERTEL CO., Quincy, Ill.

ESTABLISHED 1867

**25 YEARS A FAVORITE**

Reliable Incubators and Brooders—our Silver Jubilee.

To maintain for 25 years the first rank of superiority is a record to be proud of. It means that 25 years of experience in successful incubator building stamps 1907 Reliable Incubators and Brooders with the mark of highest quality. When buying an incubator you don't want a machine constructed on mere theories. You want it built the way that experience has demonstrated is the most successful way—in short you want a "Reliable."

You run no risks when you buy Reliable Incubators and Brooders.

They have thousands of testimonials and the awards of the world's greatest exhibitions for the past 25 years.

Some of the reasons for their uniformly big hatches and healthy chicks are:

The double heating system insures even temperature.

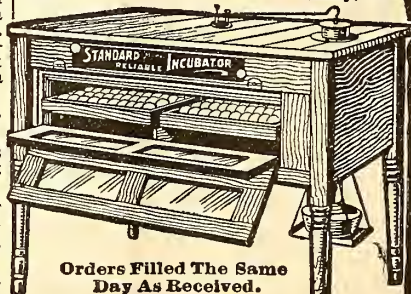

Ventilation is perfect—no poisonous gases or fumes remain in egg chamber. No cold air can reach the eggs unless

the doors are deliberately opened.

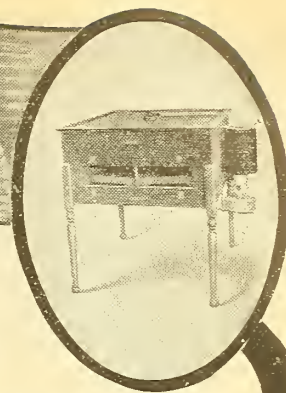

Their operation is extremely simple. They require fully one-third less oil. Silver Jubilee Catalog Free. Gives full description and valuable information.

RELIABLE INCUBATOR & BROODER CO.,
Box A-1 Quincy, Ill.

Orders Filled The Same Day As Received.

MODEL

Incubators and Brooders.

Hatch every hatchable chick, and rear them. If you are lamenting the eggs wasted in the imitation hatcher which you bought earlier, remember that the season is at its height and you still have time to put in the Model equipment and turn your failure into success. Already every mail is bringing the usual reports of good results from satisfied owners of the Model equipment.

Crystal Spring Duck Farm, Oil City, Pa., March 9, 1907.

Mr. Chas. A. Cyphers, Dear Sir:—We are using ninety-two of your Model Incubators with the greatest satisfaction. They are hatching equally well on both duck and chicken eggs, giving us a duckling or chick from every hatchable egg. We never before secured such large hatches so early in the season as we are now getting from the Model, and we will easily get out 75,000 ducklings this year, in addition to several thousand chickens.

After hatching with your machines for three years, we are well satisfied that the Model Incubator is the best we have used, as it is more accurate in temperature, hatches a larger percentage and more vigorous chickens and ducks, and the workmanship on the machine is superior. It is easier to clean and care for than other incubators, and requires less attention in operating it.

Very truly yours, P. McEvoy, Manager.

Send in your order at once and I will make prompt shipment. The Model will hatch the eggs, and when you see the chicks popping out it will put new vim in your work. The Model will spell success for you, as it will hatch every hatchable egg.

And those chicken-killers that were sold you for brooders, and in which you are losing 50 per cent of your chicks. The Model Brooders will raise 95 per cent for you, and without taking much of your time. At the Model Farm last spring we raised 12,000 chicks in the Model Colony Brooders. We have 30,000 in winter quarters now, and we are putting 60,000 baby chicks in Model Colony Brooders because they raise a chick that grows into a profitable layer.

Note:—My clients are doing equally well.

"Last year placed in the Model Brooder 52 chicks in March; had 10 below zero; raised 51.

Thos. D. Pashley, Schenectady, N. Y.

"I consider your Model Colony Brooder the best on my plant. In March we had the worst storm of snow and high winds of the winter, and I had a brood of chicks out in your brooder in this storm and it carried them through nicely.

T. F. Fitzpatrick, Wantagh, N. Y.

"I had excellent success with the Incubators and Brooders purchased from you a few months ago. The brooders have raised every one of the 92 chicks placed in them. Chas. A. Cyphers' machines are the best I have ever used.

A. H. Chapin, Brownwood, Tex.

"I cannot say enough in praise of your brooder. It is simply perfect. I never had as good success and so little trouble. I raised all my chicks.

E. J. Listul, Ashland, Wis.

"Your Colony Brooders have given complete satisfaction. Last year I raised 71 out of 72 put in my brooder."

R. N. Mullikin, Baltimore, Md.

"I am very much pleased with your brooders. I never saw chickens grow so fast under other conditions."

Mrs. Franc M. Wells, Fillmore, N. Y.

"I am operating 10 of your large machines and 24 Colony Brooders. Have had the brooders full of chickens and running this cold wave without any protection whatever. I cannot recommend them too highly."

J. W. Warren, Northboro, Mass.

The Model Equipment will do just as well for you. It will make a success of your poultry work this year. Send in your order now and I will make prompt shipment.

THE NEW WAY TO HATCH

This is the only Incubator invented in years that radically departs from the old hatching methods. The Handy Hatcher copies the process Nature employs—we accomplish this by doing exactly what all other incubator builders have tried to avoid. Results prove that in this departure we have really solved the problem of true incubation and have the simplest, most perfect hatching machine ever devised. Write today for free catalog describing it. You'll be astonished and pleased with this unique idea and the way it works.

THE HANDY HATCHER
Box A,
Rossville, Ill.

EVERY POSSIBLE EGG HATCHED

"The 240-egg incubator I purchased of you four seasons ago is just as good as the day I received it. Not a crack in the case; door fits perfectly. This season I hatched 146 chicks from 158 eggs (92 per cent). On breaking the remainder I found all had hatched that possibly could. I am more than pleased with the

Banta Incubator

This is only one out of scores of letters from gratified users from every point of the compass, published in our new, free catalog. Send for it and soon learn the secret of getting big hatches at a minimum expense. We take all risks. We hedge your rights about by our refund guarantee.

BANTA-BENDER MFG. COMPANY,
Box 10, Ligonier, Indiana.

Don't handle the Eggs

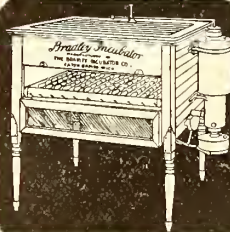

Every time you touch an egg you lessen its chance of hatching. Some birds leave their nests forever, once human hands have touched their eggs. Bird instinct should teach us never to handle the hatching eggs. The **Bradley Incubator** is the only one made in which it is not necessary to touch the eggs after they are put in.

The Bradley Turning Tray Turns Every Egg

in one second's time. Works like a charm—never an egg broken, a great time saver, better hatcher, better starter of new-horn chicks. The **Bradley heater** has neither rivets nor solder. You can take apart, clean and put together again in five minutes. A fresh heater every hatch, if you like; no soot to cause fumes and smoke. A new method of construction renders the Bradley hatching chamber cold and damp proof and gives an absolutely **non-variable temperature**. No open joints, no cold corners. We guarantee the Bradley to give results second to no other incubator made in good, strong, healthy chicks, or your money back.

Don't buy an incubator until you have seen our catalog A. Ready to mail Dec. 1st. Free if you mention this paper.

THE BRADLEY INCUBATOR COMPANY,
Eaton Rapids, Michigan.

**Your Hatch Will
Be Right if your
Thermometer is
Right**

An Incubator Thermometer is small in bulk and in price, but it is the most vital part of an incubator. It is the heat that hatches, but to hatch right the Thermometer must be right. It makes little difference what make of incubator you use, if your Thermometer is accurate and you keep the temperature at 103 degrees. To be absolutely safe, use the

HOEHN RED CROSS THERMOMETERS

The bulb rests upon the eggs so that the Thermometer gives you the temperature you want to know. It is easy to keep this at 103 degrees, because this point is emphasized by a narrow point. The black metal frame with white graduations and figures makes it easy to read. These Thermometers are all well seasoned and accurately tested before being shipped. Send 75 cents for a sample Thermometer (prepaid) or ask for catalog illustrating other styles. This catalog is free. It answers your questions about incubator Thermometers.

WINNINGS WON BY DUSTON'S WHITE WYANDOTTES

The story of the winnings this season would occupy a good share of this paper this month. A pair sent out to compete at a BIG show won 1st ckl., 1st pullet and silver cup for whitest bird. Another ckl. and hen won 2 firsts, beating out celebrated winners of two other shows that had been sold for big money. My policy is well known, that I do not tell where my birds win; according to my custom I show a few testimonials—**FRESH** ones.

New York, Feb. 21, '07.

Dear Sir: Beg to advise that the two hens arrived and am very much pleased with them indeed. Have three good pullets from setting purchased of you last season, which gives me quite a nice little flock, etc.

Oregon, Jan. 31, '07.

Dear Sir: The cockerel arrived January 23rd O. K. Please accept thanks for your choice selection, etc.

West Virginia, Feb. 18, '07.

Dear Sir: It will certainly interest you to learn how the ckl. fared at — show. He scored 94 by T. E. Orr—1½ points more than 2d ckl. My winnings were 1st ckl., hen and pen, 3rd pullet, 2nd cock. It is needless to tell you that I am more than pleased, etc.

New Jersey, March 1, '07.

Dear Sir: The bird reached me yesterday in good condition, and I want to say that he is in every way satisfactory, and indeed as fine a cockerel as I have ever had in my yards, if not the finest. I wish to thank you for your kindness and the treatment I have received at your hands. I shall be glad to have my friends meet you.

Pennsylvania, Feb. 4, '07.

Dear Sir: Am pleased to say the pen won 1st at —. I am delighted, etc.

Rhode Island, Feb. 4, '07.

Dear Sir: I am pleased to say that the ckl. which you shipped me arrived in —, in due time. He certainly is a better bird than I was ever able to buy for double the money, and I thank you for making the selection for me, etc.

A NEW YORK PRIZE WINNER BRED AND OWNED BY
ARTHUR DUSTON, MARLBORO, MASS.

New York, Jan. 18, '07.

Dear Sir: I thought I would wait until after the — show before I wrote; it closes tonight. I was with the cock here and at —, the judges at both places pronounced him as fine a cock as they ever saw and were surprised I got as good a one for \$25. I am more than pleased. Judge — scored him 95½ at —; there were 25 cocks in the class. He said he was so far ahead of the 2d cock that there was no comparison. The judge at — was inclined to "knock" you a bit. I let him go as far as he liked, then called him over and pointed out the cock and told him that he was direct from you that day. Well you should have seen him wiggle and scratch: he didn't know what to do or say to square himself. We all gave him the ha ha in a quiet way. He has been a good ad for you. Thanking you for the bargain you gave me, I am, Sincerely yours,

Ohio, Feb. 20, '07.

Dear Sir: Our birds were received last evening and in good condition. We are delighted with them; find them beautiful. Thanking you sincerely, we are
Yours very respectfully,

Ohio, Jan. 19, '07.

Dear Sir: Would like to state that the ckl. purchased of you last May has won several firsts for me at different shows, such as our own in a class of 35 cockerels.

Stoneham, Mass.

Dear Sir: The pullet that I bought of you proved to be a wonderful layer. She laid 57 eggs in 60 consecutive days, laying the last 35 in 35 days. Her eggs were nearly all fertile, etc.
Yours truly,
L. L. Gore.

These tell the story of Duston Quality, and I can duplicate by dozens since the first of January. If you want THE goods you can be sure of it if you send to the breeder who has made possible "The World's Best Flocks." 4c stamp for catalogue. EGGS: 1 set \$5, 2 sets \$8, 3 sets \$10, 5 sets \$15 and \$20 per 100

**B E E B E ' S
S. C. W. LEGHORNS**

Are the thing.
Have won their laurels in many a ring.
Too proud to follow the shows of late.
Just stay at home and guard their mate.
My birds have the rest run in their holes.
Jerked away from the judges, flew on the barber pole.
And crowed we are the stripe.
That's give the rest a swipe.
Our pens are large but only eleven;
We score from 95 to 97.
Come buy our eggs and be our kin,
Do not let the other fellow win.
Eggs \$5 per fifteen, \$10 per fifty, \$13 per hundred.

H. C. BEEBE, R. 5, Canton, Ill.

Favorite Trap Nests

This elegantly designed and finely made Dining Table contains nothing in its make up but solid golden oak; the workmanship and finish are unsurpassed in their excellence. Six Foot Given Free with a \$10 Assortment of Groceries and other Products.

The Roosevelt Comfort Rocker. Very stylish finely figured quarter sawed oak, veneered seat, finished golden. The most beautiful and comfortable rocker ever Given Free with a \$10 Assortment of Groceries and other Products.

An Easy Way

When you purchase \$10 worth of groceries from your home merchant a number of people have had their profit and expenses added to the actual cost of the goods after they left the manufacturer and before they reached you, which you pay. When you purchase \$10 worth of groceries and other products from the manufacturers you pay no merchants' profits and expenses—you secure the goods at actual manufacturer's cost.

This accounts for the fact that we can give you your choice of \$20 worth of products, usual retail value, without premium for \$10. Or we give you \$10 worth of products, usual retail value, and a \$10 premium both for \$10. We pay the freight by enclosing extra goods to cover freight charges. Every article and every premium is guaranteed to give satisfaction or money refunded.

A FULL EGG BASKET IN WINTER

That is what rejoices the heart of the poultryman for that is when eggs are eggs and bring fancy prices. The way to fill the basket is to exercise care in feeding. A winter ration that supplies the same food properties which the hens get in warm weather when they find plenty of grubs and green food will give you eggs in winter. A mash made of

Harvey's Electric Poultry Food and Cut Alfalfa Hay

gives the hens just what they need for egg production. They will get busy if fed in this way. Sample free. To growing fowls feed Harvey's Ground Beef Scraps and Harvey's Mixed Grains. Write today for big free catalog of immense line of poultry supplies. We can save you money.

AMERICAN STANDARD OF PERFECTION

OFFICIAL GUIDE TO POULTRY CULTURE
Latest Revised Edition (1906)
304 PAGES; 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
WORK ON THE TECHNICAL POINTS OF
STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
MORE THAN THREE THOUSAND DOLLARS

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

a. A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.

b. The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.

c. Instructions to judges and the official 'cuts for defects'—invaluable information for every exhibitor who wishes to be successful.

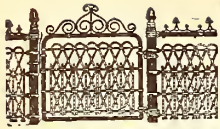

d. The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world's best poultry artists, and were revised and approved by members of the A. P. A. at a four-days' session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

THE AMERICAN STANDARD OF PERFECTION IS AN INDISPENSABLE
GUIDE IN THE BREEDING AND EXHIBITION OF PURE BRED POULTRY

What the Poultry World Has Been Waiting For

An Incubator in Which the Heat is Applied to the Top of the Eggs

This is Nature's way, and there is no other natural way. The eggs are surrounded by fresh air, moderately, correctly warmed. No hot box egg chamber; no burned out air; no feverish, thirsty chicks; no subsequent chills and bowel trouble. Largest hatches much the hardiest chicks.

You want to know about the incubator that supplies every condition that Nature supplies, and in the way that Nature supplies it.

You want to use the most convenient machine yet devised. Ours is a pleasure to operate. With new self-supporting egg drawer you never lift or carry a tray; you never spill

an egg. Our thermometer arrangement is the handiest and best ever made.

You want to own the best constructed, most durable and finest appearing incubator made. It will never wear out. It embodies the best points of all classes of incubators in addition to its own exclusive features. The prices are right. The machine is guaranteed. You take no risk.

Investigate our All-Purpose Brooder. Entirely new in design. Hovers just as the hen hovers. Can be used indoors and out, in a colony house, piano box, or anywhere you want to keep a brood. Can be moved instantly from one place to another. Always ready for business. Suited to everybody's needs. Efficient, economical.

Get Your Sure Hatch Book!

SEND NO MONEY, but simply say on a postal card, "Send me a FREE copy of the Big New 102-Page Illustrated Sure Hatch Book," and give your name and address. By return mail we will send you the greatest book on Incubators, Brooders and Poultry Raising that you ever saw.

To celebrate the biggest year's business in the history of this or any other incubator company, we are putting out the finest, most complete, most practically helpful, interesting Incubator and Poultry Book ever printed, and give the whole edition away. We want to make you a present of one of these grand books.

The Sure Hatch Book is not only a Complete Handbook of Poultry-Raising Information, but tells all about the

Sure Hatch Incubator

which has the highest hatching record and lowest selling prices of any incubator on the market. Over 110,000 Sure Hatches are turning eggs into big round dollars for poultry raisers from Maine to California and from Canada to the Gulf. This is the incubator that runs itself and pays for itself with one hatch. A test will prove it. We guarantee the Sure Hatch for 5 years, and make a wide-open proposition to take it back at our expense if it fails to make good on any claim we make for it. The same guarantee applies to our unequaled Brooders. We pay freight.

Send for free copy of the Sure Hatch Book and our liberal 1907 special offers. Write at once—postal cards are cheap, and the book alone is worth \$1.00. You'll sit up nights to read it.

Sure Hatch Incubator Company

 everywhere

Who Is The Judge?

This feed will raise more chicks, better chicks, stronger chicks and quicker and costs no more. If your store keeper does not handle the Steinmesch's Specially Prepared Chick Feeds, write us. On all orders for 200 pounds or more, we will pay the freight to any part of the United States.

STEINMESCH'S Extra Quality CHICK FEED

is prepared entirely with a view of offering poultry raisers the very best feed for the rearing of chicks. A practical experience with chickens for 20 years, backed up with the experience of the best authorities in the country on raising chickens, justifies us in saying that no chicken feed is complete without grit. No balanced ration for poultry is complete without grit—we use the very best grit that money can buy—5 pounds of grit to 100 pounds of feed. We use pin-head oat meal, cracked grains and seeds, beef scraps, bone, charcoal, etc. 20 different kinds. Our feed is free from dust and dirt. It is all feed—no waste—therefore, economical, and chicks if properly fed will eat every particle of it, including the grit. We sold 1,000,000 pounds last season and we are going to sell 2,000,000 this year. It is used by William Ellery Bright, Waltham, Mass., the Barred Plymouth Rock and S. C. Brown Leghorn King of the Country; by O. L. King, Walnut Grove, Ill., and R. W. Wales, Iowa City, Iowa the Barred Plymouth Rock Kings of the West; by Mrs. Della Maxwell, Fayette, Mo., who has won more and larger prizes on Barred Rocks than any other lady in the country; by J. A. Vannatta, Vandalia, Mo., the S. C. White Leghorn King; by C. A. Morton, St. Louis, and Henry P. Mason, Fayette, Mo., the Buff Rock Kings of the West; by Bruce Bros., Crescent, La., and H. W. Blanks, Columbia, La., the biggest poultrymen in Louisiana; by William Miller, Crescent, Mo., the White Rock breeder, who paid \$1750.00 for 7 White Rocks; and by hundreds of poultry fanciers and experts who cannot be fooled with the feed that contains no grit. Over 500 dealers are handling the Steinmesch Extra Quality Chick Feed. If your dealer is not one of them, give us his name or send to us direct and we will ship promptly, and on an order for 200 pounds or over at a regular price of \$2.50 per 100 pounds, we will pay the freight to your door—any part of the United States. Send for our catalog of other supplies anyway. It is free. Every chicken man ought to have it. We are general Western agents for the Cornell Incubators, Peep-o-day Brooders, Mann Bone Cutters and Empire Coops. We have 1,000 head of fancy poultry on our farm, all varieties. We sell eggs for hatching. Every good thing for the poultryman—Steinmesch has it. Address,

EGGS \$3 per 15, 2 settings \$5.

A. B. KAYE, KAYE'S PARK - - - Walworth, Wisconsin
State Vice-President American Black Minorca Club.

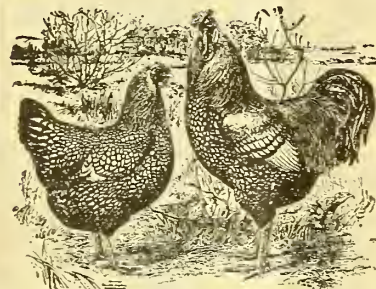

RHODE ISLAND REDS

GREATEST WINNINGS OF THE SEASON

At the great A. P. A. Show, Cincinnati, 1906, I won on S. C. R. I. Reds, four 1sts, three 2ds, five 3ds, two 4ths. On R. C. two 1sts, three 4ths, four 5ths and special for best shape and colored female in Single Comb. Also three silver cups.

LESTER TOMPKINS :-: :-: CONCORD, MASS.

Do You Know Hummel?

If not, you had better get acquainted. I have my breeding pens all mated up and can now fill your egg orders. My breeding birds score from 90 to 96 points. I have been very particular in selecting male birds for breeding purposes this season, every bird is strong and vigorous. By my method of packing eggs I am able to ship them anywhere with good results to purchaser, and guarantee safe arrival of eggs at your nearest express office at the lowest possible rate. You can order your eggs direct from this advertisement.

BARRED P. ROCKS

The world renowned "Ringlet" strain in their purity, positively pronounced by more people to be the best in the world, than all the strains combined. At the Wisconsin State Show, 1906, in a class of 300 our birds made a clean sweep, winning more prizes than all our competitors combined. We will sell eggs from our finest exhibition ckl. or pullet matings at \$4 per 15, \$7 per 30, \$10 per 45. One bird from these eggs will be worth more than three times the cost of a setting. We have on file more and stronger testimonials than any breeder in the country, which is best evidence of fair treatment and the quality of our stock. Yours sincerely,

KING BROS. Oshkosh, Wis.

LITTLE CHICKS

Capacity 20,000 eggs. Our seventh year. Day old chicks \$8 to \$10 per 100. Fine S. C. Brown Leghorns our specialty. Also heating outfit and plans to make your own brooder for \$2.25. Booklet and plans free.

HERE'S THE GREATEST INCUBATOR BARGAIN.

THIS 230 EGG Royal Incubator \$12.⁷⁵
FREIGHT PREPAID ANYWHERE

East of the Rocky Mountains.

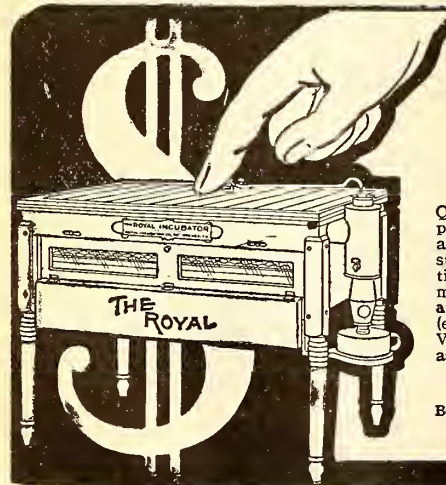

Quality and price—two things that "talk." You can't get a better incubator than the Royal at any price. It is built right, strong, substantial, will last a lifetime, and is guaranteed to hatch as large a percentage of fertile eggs as any incubator in the world. It is not a "cheap" incubator, but is strictly high-grade in every respect. Easy to operate; automatic control of heat; perfect ventilation. **ONE TRIAL HATCH FREE**, if you want it. Your money back if not satisfactory. Don't pay more for a smaller incubator; don't buy a poorly constructed, go-to-pieces incubator; don't buy any incubator until you have investigated our remarkable offer. Remember, **WE PAY THE FREIGHT**, (east of the Rockies). We guarantee the incubator under a bank bond; we give you a fair trial. We save you about half the cost and guarantee better results than incubators give costing twice as much. It will surely pay you to investigate. Write to-day for special offer:

::

KINDERHOOK, N. Y.

BUFF WYANDOTTES

During the past ten years exhibiting at New York, Boston and Pan-American we have won 31 1sts, 20 2ds and 16 3ds prizes, averaging three 1sts and two 2ds prizes each time exhibiting, more than all competitors combined. At New York, Jan., 1907, we won 1 6ckl, 1 pen, 3 6cock, 3 4, 5 hens, 3 pullet, and the 1 pullet, 2d ckl, we purchased. Thus as usual we brought home three out of five first prize winners, all of which are in our yards today. Annual public demonstrations in America's leading exhibitions fully demonstrate the great merit of our strain beyond anything we can add or competitors detract from. We are, and have been since the origin of this breed, producing good goods at reasonable prices for stock and eggs.

S M Yoder \$100 00

One hundred and no 100 DOLLARS

AMERICAN POULTRY JOURNAL PUBLISHING CO.

Per *Geo E Oates* Pres.

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sells on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize. Wishing you and the Journal success, I remain
 Very truly yours,
S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

you can get premiums worth another \$100 or more, and you have your choice of 100 different premiums.

All Who Send Us Five Subscriptions

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

American Poultry Journal Publishing Co., - Room 510, 325 Dearborn St., Chicago, Ill.

The Best of "The World's Best"

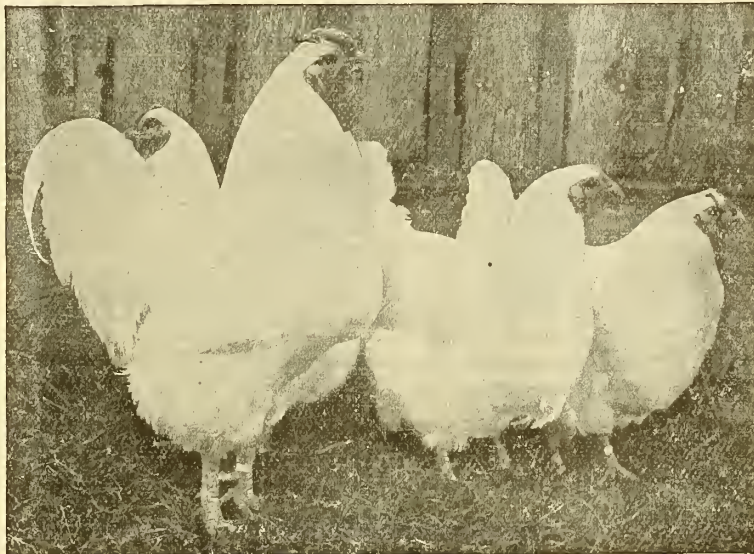

Our show record—made by ourselves—not the winnings of our customers, or not only at one show where the class might have been small and of no quality, but at the A. P. A. Show at Cincinnati, O., Jan., '06, in a strong class, our birds won 5 prizes and 5 specials: cock, hen, cockerel, pullet and best display. Indianapolis, Ind., Feb., '06, one of the largest shows ever held in that city, we captured every 1st and 2d in single class, 2d and 3d pen and 3 specials. Indiana State Fair, Sept., '06, in another hot class, we won 1, 2, 3 cock, 2d cockerel, 1st hen and 1st pen. Tennessee State Show, Oct., '06, the hottest show ever brought out in the South; 1st, 3d cock, 1st, 2d cockerel, 1st, 2d, 3d hen, 1st, 3d pullet, 1st, 2d pen.

This proves to you that we have THE "WORLD'S BEST" WHITE WYANDOTTES. On the testimony of judges who have given our birds so many prizes, of breeders who have visited our yards and of the public who have bought and came back to buy more time and time again, we have a few birds that

MONEY CANNOT BUY

Eggs From These Birds

can be bought. We have mated 15 yards for the egg trade, and to order you get one egg from each of the yards. From these eggs prize winners are going to be hatched. We could not get better stock than what we have in these pens if we were to offer A THOUSAND DOLLARS EACH FOR HENS, because we already have the WORLD'S BEST, and all our matings are the BEST of the WORLD'S BEST.

HUNDREDS OF BIRDS

still for sale, and we are ready to fill orders for those who are in need and want the right kind of Wyandottes at the right kind of prices. Breeding cocks or cks, bred from winners and that will breed winners; females that have been bred from winners and will breed the same for you. We now have the choice birds of last season's breedingbirds that are good enough to produce birds fit to uphold our claim of the WORLD'S BEST.

J. C. Fishel & Son, Hope, Ind.

Dear Sirs:—As I reported the safe arrival of the eggs, I will now report the hatch. On the morning of the 1st when I went to the nest, there was one chick out; I began to think the hatch was an April fool. To my surprise when I got home at noon—to be sure there is where I went first—I saw that I had some more but I did not molest her; I saw the little heads peeping from under her. When I took her off she had nine of the nicest little chicks I ever saw—not a cripple. I am well satisfied, if I can just raise these. Wishing you all the success, I am
Yours very truly,

April 9, 1906.

What a Few of Our Last Season's Egg Customers Said

J. C. Fishel & Son, Hope, Ind.

Gentlemen:—I received the eggs in the best of shape, letting them set for 48 hours, then put them under a good mother hen. I watched that hen every day, and on the 15th she came off the nest with 12 of the nicest little chicks I ever saw. The hen stepped on one of them, the rest are doing fine and I have great hopes that they will all live. Thanking you, I am
Yours very respectfully,

April 26, 1906.

J. C. Fishel & Son, Hope, Ind.

Dear Sirs:—You no doubt remember my reporting to you the hatch of 11 chicks out of the setting of eggs I purchased of you. That no doubt was good news for you to receive, but I am more than pleased to inform you that I raised 4 cks, and 5 pullets from those eggs. I showed 2 of the cks, and 4 of the pullets at —, won 1st and 2d cks, 1st and 3d pul, and 1st pen, also silver cup as special for whitest bird, which I won on the ckl. This proves to me that you have all you claim—The World's Best W. Wyandottes. Thanking you again for your fair treatment, I remain, Your friend,

Oct. 19, 1906.

These are only a sample of the many testimonials we have from the more than satisfied customers of ours. We can and will please you in the same way if you will but give us a chance.

Although the quality of eggs has increased two-fold, the price remains the same—\$5 per setting, unless selected from one special pen. Send 10c in stamps for our catalog, the most elaborate book on Wyandottes today; also our mating circular for this season, and a picture of two of our winners in their natural colors.

THE MATING OF THE BREEDS.

Some of the Dangers Now Threatening America's Most Popular Fowl—Why the Present System of Judging the Barred Rock Is Wrong, and Where It Will Lead to Unless Speedily Checked—The Disregard for Surface Color and Undue Attention Now Being Given to Under Color Detrimental to the Interest of all Concerned—
M. S. Gardner Sounds a Note of Warning and Tells How to Properly Make Up the Breeding Yards.

Paper No. 4.—The Barred Rock.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The Barred Rock remains America's most popular fowl, and there is nothing to indicate that it will be displaced. They are found in large numbers upon the farms, in the homes of the cottagers and in the fanciers' yards, always yielding good returns when properly attended to. As an exhibition fowl they still rank first, although White Rocks and White Wyandottes have of late moved up into the same class. The old style of Barred Rock is no longer tolerated in the show room or in the yard of the careful, painstaking breeder. These birds of the wide, open barring are no longer seen. Now the effort is to get narrow barring and as deep barring as possible. This has resulted in the present-day specimen being darker in color, or seemingly so, than the type of birds shown a few years ago. And right here we think a note of warning should be sounded. Let me quote one of America's most successful breeders and exhibitors of Barred Rocks, a statement made to the writer in the New York show room last January:

"The present system of judging Barred Rocks is wrong, radically wrong. Now the craze is for 'barring to the skin.' The judge when he steps up to a cage takes out the specimen and proceeds to look for under color and deep barring, ignoring in part or wholly surface color. Here is an illustration. There is a hen that has the finest surface color of any Barred Rock hen exhibited at New York for years. Yet she is unplaced because she is not 'barred to the skin.' It is all wrong, and the Barred Rock will be ruined if this system prevails. We must pay more attention to surface color and marking—the things we see in a specimen and which make it attractive."

There is so much truth in the above statement that all judges and breeders should give it careful attention. Shape and surface color are being sacrificed for the deep barring to such an extent that the variety will soon be ruined if a halt is not made. And this is the opinion of the best breeders, who are just as anxious for good under-barring as are those who are now carrying their preference to a dangerous limit.

Mr. M. S. Gardner, who by the record made is one of America's foremost breeders and successful exhibitors, in the following tells us how to mate and to produce the choicest Barred Rocks:

Several years ago the poultry papers were full of letters from different breeders of Barred Plymouth Rocks, each telling just how to manage to produce good ones. Some

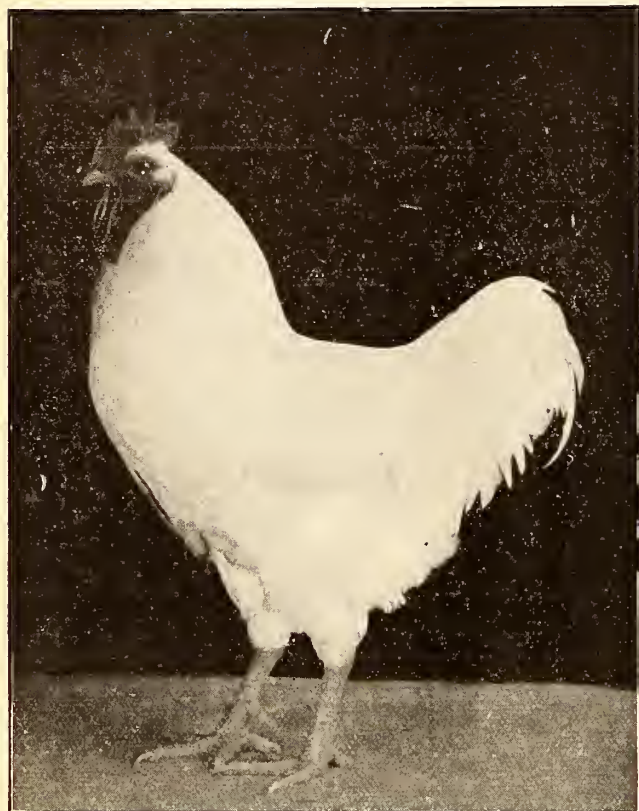

avored standard matings, some called them single matings, and others claimed that the double mating system was the only way. Very little has been written upon the subject of late, or at least comparatively little has appeared in the poultry press. While attending the recent poultry show at Cleveland the matter was again brought to my attention by several breeders who are just taking up Barred Rocks as a specialty and who ask to be given some pointers on the proper manner of mating to produce the greatest number of first-class exhibition and breeding specimens and the smallest possible percentage of the kind that is consigned to the pot at an early age. So far as I know, at the present time, all the prominent Eastern breeders are using the double mating system, and for the benefit of the new men and women in the business I will try to explain as briefly as possible the meaning of the term double mating, and how it is applied in our yards to the breeding of Barred Plymouth Rocks.

If the man who is just starting out to breed Barred Plymouth Rocks buys a pen of fowls mated for breeding and raises a number of chicks from the pen, he is sure to make the discovery, when they reach maturity, that the males are all much lighter in color than the females. If the females raised from the pen are of standard or exhibition color, then the males will be too light for exhibition; or if, on the other hand, the pen produces cockerels of standard color and barring, the pullets will be much too dark for exhibition. This has been the case since Barred Plymouth Rocks originated. The standard for Barred Rocks describes a male and a female of practically the same shade of color, but nature refuses to produce them that way from one pen or mating. After a number of years' experimenting along different lines and trying different methods of mating, the most successful exhibitors of this variety began to use the double mating plan, or a mating of dark birds to produce cockerels of the right color and character of barring, and a lighter mating to produce females of the clean color and barring so much admired in the show room.

Our own cockerel mating pens are usually headed by our best exhibition males, or at least those that have been bred from a long line of exhibition males. We sometimes use a male that is darker than standard if we know that his breeding is right. With this male of standard color, or perhaps darker, we use females very dark in color and narrow in barring, and bred from a long line of cockerel-bred birds. It is not enough that females should be dark in color. In order to be reasonably sure of results, they should be of the same line of blood as the male, and both should have been bred in line for a number of years. In other words, you should be able to trace their ancestry back to a long line of fine exhibition males. The standard describes a bird with yellow legs and beak. We make no effort to breed our cockerel-bred females to standard in color of either plumage or of legs and beaks. Many of our best cockerel-bred females show no yellow in either legs or beaks, and those that do, have black spots on both. In color of plumage, we prefer females so dark and narrow in barring as to show no white between the dark bars below the surface, or after the first three or four bars, and very little on the surface. On the lower part of the feather, or for the last inch or so next the skin, we prefer to have the bars run together. From females of this kind, we get cockerels good in surface color, good in legs and beaks, and with barring showing distinctly to the skin. Cockerels bred from females that show white in under-color are very liable to be weak in under-color, and are often what we call "cotton-backs."

In our matings to produce exhibition pullets, we use our best females of standard or exhibition color. These females

are the result of a number of years' careful breeding for good Plymouth Rock shape, narrow, clean-cut barring, and clean color. The males used in our pullet matings are of the same line of breeding, but much lighter in color than the females. While it is desirable to have the barring in a pullet-bred male as straight and regular as possible, it is not always desirable to have him barred to the skin like an exhibi-

First prize cock Missouri State Show. Winner of Silver Sweepstakes Cup for best shaped cock bird. Bred and owned by William Miller, Crescent, Mo.

bition male. If the females in the pen are good in under-color and barring, we prefer to use a male that is not too heavy in under-color. If a pullet-bred cockerel's mother and sisters are good in under-color and barring and of fine exhibition quality, we do not hesitate to breed from him, even if he shows considerable white in under-color of back and some in other sections. Pullets sired by such a male are more sure to be of clean surface color than those sired by a male that is barred to the skin. A pullet-bred male, to be valuable as a breeder, should be of typical shape and should have very rich yellow legs and beak.

In addition to the points above mentioned, both cockerel and pullet-bred birds should have red or bay eyes, and should be free from standard disqualifications.

From the best matings, however, one must expect a large number of inferior birds, fit only for market purposes. This is true of all standard breeds, and especially so of the parti-colored varieties. Comparatively few high-scoring exhibition birds are produced in any breeder's yards in any one season. I make this statement after having had the pleasure of visiting the plants of nearly all the prominent Eastern breeders. The beginner who expects 90 or 95 per cent of his chicks to live to be prize-winners and fine exhibition specimens will be sorely disappointed. The defect most often found, perhaps, in Barred Plymouth Rocks, is that of black feathers. Even the best birds, especially females, usually have a number of black feathers in various parts of the plumage. But these are not alarming to the experienced breeder, as up to the present time it has been impossible to breed them out. In preparing Barred Rocks for the show room, however, it is always advisable to leave all black feathers at home.

Never breed from either males or females showing positive white in ear-lobes or feathers on legs or feet. Occasionally a chick will hatch from eggs from the most carefully selected pen of breeders, that at maturity will show white in ear-lobes or feathers on legs. It will require years of careful

selection in mating yet to entirely breed out these tendencies inherited from a remote ancestry.

If you are just beginning to breed Barred Plymouth Rocks, do not buy your pen of females from one breeder and your male from another. Mating birds of two different strains of any parti-colored variety is an experiment and usually results in disappointment. It should be attempted only by the experienced breeder. The safer and surer plan is to buy stock or eggs from some one reliable breeder. If stock is purchased, have the pen mated up for best results by the breeder who raised the birds. The man or woman who begins breeding Barred Plymouth Rocks with a pen mated for producing fine cockerels and another pen mated to produce fine pullets, if these birds are line-bred and mated by a reliable and experienced breeder, is started on the right road to win the coveted ribbons in the Barred Rock aisle.

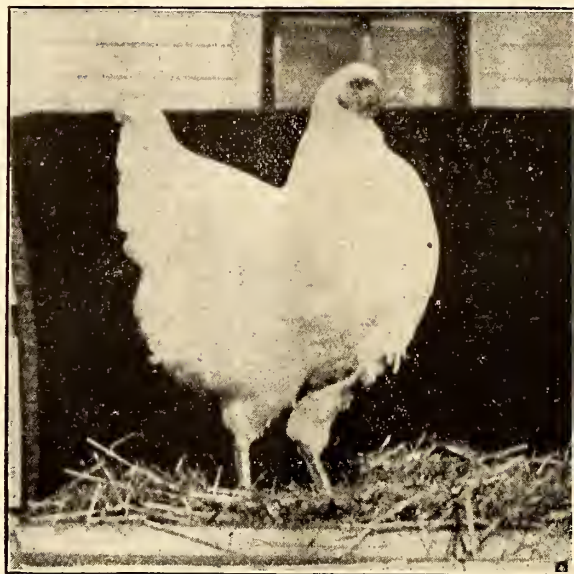

THE POULTRY FANCY IN ENGLAND.

A Review of the Condition of Affairs and Standing of the Various Breeds and Varieties Which Will Interest All American Fanciers—American Wyandottes Now England's Most Popular Fowls.

Annually, at the close of the exhibition season, Mr. W. M. Elkington contributes to Poultry a review of the condition of affairs in England, giving the standing of the various breeds and varieties. Mr. Elkington is a keen observer, a practical fancier and showman and an interesting writer. His review of the situation as shown by the exhibits of 1906-7 will, we feel sure, interest all American fanciers. Mr. Elkington says:

Among the Game varieties, moderns are becoming more and more scarce at the smaller shows, while Old English generally draw a satisfactory entry. Some remarkably good Indians have been seen, and great improvement was noticeable in this variety at the smaller shows, where competition is becoming very keen. Black Sumatras have had a good season, and are undoubtedly attractive.

The modern Langshan fancy holds together well, if it does not rapidly increase. At most of the shows the breed was well represented, and if there has not been anything of outstanding excellence there has certainly been level quality all round, and comparative absence of flat-shanked, ungainly creatures. The fine-boned, clear-limbed modern Langshan

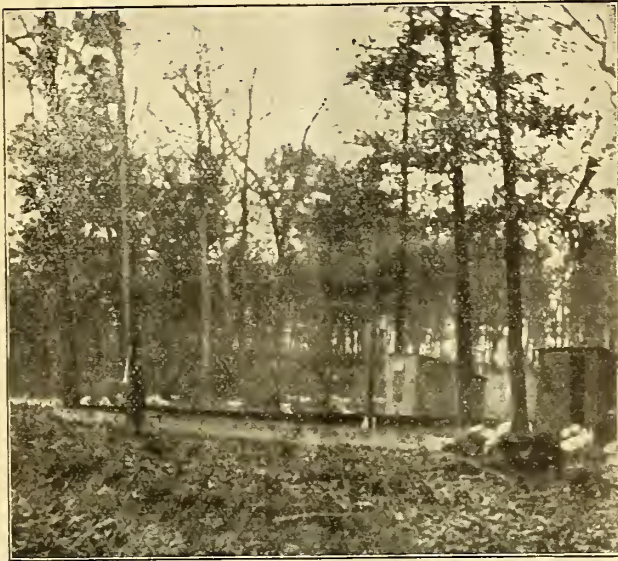

Taylorville Perfection, first prize W. P. Rock pullet at Taylorville, the highest scoring bird ever exhibited at Taylorville. Score, 95%, by Rigg. Bred and owned by J. A. Bickerdike, Millersville, Ill.

of the present day is a different thing from the monstrosity of a few years ago. The Croak type has not made any great advance as regards color, but it is a solid serviceable fowl, and should command no lack of support.

The Orpington family has been well to the front. We must still give the palm to the buff, as being the most popular variety of the day, and there seems no immediate prospect

of that title being disputed. We are getting better type in this variety, but it would be well if there were some general agreement as regards color. There can be only one true buff; lemon, yellow and cinnamon can scarcely come in that category. Among the blacks there has been some magnificent quality, and the big classes for young birds testified to the number of excellent specimens that have been bred. The

One of the many views of colony houses used for raising Rose Comb White Leghorns by the Rocky River Poultry Co., No. 14, The Oaks, Deerfield, Ill.

whites are fast coming to the front, and I am pleased to see that classes at provincial shows have filled much better than in former years. The variety is undoubtedly destined to be one of the most popular for general purposes, and as regards show points there has been general improvement in type, but breeders could do with a few lessons from White Wyandotte men in the matter of color. The Jubilees have also made great headway, and but for their unfortunate resemblance to the Speckled Sussex they would no doubt win general appreciation. Spangled have not done so well either in numbers or quality, and I am not sure that this type of marking appeals to fanciers. In neither the Ancona nor the Houdan do we find any indication that a large portion of the public appreciates mottled plumage.

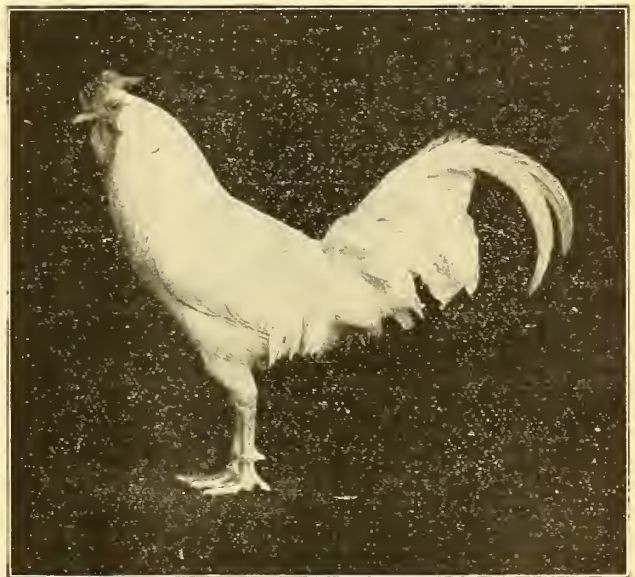

Plymouth Rocks are still, and will be, I hope, for many years in the very front rank among popular breeds, and the position of the barred variety has become soundly established. Among the produce of the year there was nothing sensational. At the Dairy Show pullets appeared to be very backward, and even at the later events, though there have been one or two nice ones, the majority was decidedly disappointing. Cockerels were a little better, and one or two have been decidedly good; but the past season has not been notorious for quality in Plymouth Rocks. Buffs have not done very well, but whites appear to be on the increase, and the color is very satisfactory. In blacks only the hens are worthy of notice.

Wyandottes still maintain their popularity, and this big family has had another very prosperous season. In silvers, one or two cockerels have been above the average, though top color has been the general failing; but pullets have not been strikingly good. The majority have failed in their white, and in one or two cases some of the clearest laced birds were sadly deficient in soundness of black. Gold cockerels have not been quite so good as in former years; the quality has been mixed, and among a lot of very dark topped birds it has been difficult to find good top color together with rich ground color and open lacing. One or two pullets have been above the average and we have seen decidedly better size and shape. Whites have been magnificent, especially the cockerels. Among the Partridges, cockerels have excelled in quality. There have been a greater number of rich colored birds, and striping has been sounder than in any previous year, while as regards shape and size, the 1906 birds make a great advance. Pullets have not been so good, and there has been nothing to equal the champion of 1905, though in old hens we have had some magnificent quality, and the pencilling of some of the best is truly an object lesson in the art of breeding. The popularity of the breed is in no way

impaired, and its success during the first stage of the laying competition has called general attention to its sterling qualities.

The most noteworthy advance in silver pencilled has been in the quality of the pullets, which have been better in color and sharper in pencilling, but it is unfortunate that the pure silver ground color is so quickly lost. One or two cockerels have been excellent in color and striping. Nothing has done better than the Columbians this season. They have shown remarkable improvement, and have made many new friends. The best pullets are fit to compete with any Wyandottes, but there is much to be done in the cocks. Blue laced may not make much headway, but they are certainly not going back whence they came. Both in pullets and cockerels, the best birds of 1906 are well in advance of anything I have seen. The blacks, after hanging fire for so many years, have at last got a start, and have been hailed by many fanciers as quite a new variety. It is too early to say much about their quality, though some nice pullets were seen at the later shows. When they get into the hands of experienced Wyandotte breeders and are judged by regular Wyandotte judges, we may see a very handsome addition to this big family, and a very prosperous state of affairs for breeders. At present, however, it is apparently difficult to convince some exhibitors that what may be good shape for a Plymouth Rock is not good shape for a Wyandotte.

Among the Leghorns, the blacks appear to have things pretty much their own way. I am not surprised, for they are charming birds, and the high honors that have been achieved by representative specimens during the season testify to the improvement in quality. Combs and lobes are now very good, legs are excellent in most cases, color is brilliant, and if we can only rely upon breeders and judges to stand by the true Leghorn type, there should be no limit to the popularity of this breed. Browns still enjoy a good share of popularity, and head points have reached a high standard of excellence. But the variety might be made so much more attractive with brighter color and more decided striping in the hackle, that I wonder breeders do not pay more attention to those points. Buffs are very good, and the Buff Leghorn fancy is apparently one in which a novice may enter with excellent prospects. Duckwings just maintain their position, but piles are going back, and cuckoos are very moderate. I was forgetting the whites. One is almost afraid to class them among Leghorns. For what they are I suppose they are very good. They have excellent color, good combs and lobes, and some of them are getting so tall and narrow that soon we shall

"IVORY KING."

First prize cockerel Rose Comb White Leghorn, Chicago, 1907. Winner of Ivory Soap Cup—whitest bird in the show. Owned and bred by the Rocky River Poultry Co., No. 14, The Oaks, Deerfield, Ill.

only be able to see them sideways. They are very nice indeed if that is the correct type for White Leghorns.

That good hardy perennial, the Minorca, is still one of the best attractions at all shows, and it is astonishing how the small fanciers in the towns pin their faith to it. There is always something good in this variety, and though the "cracks" at the big shows may stand in a class by them-

selves, many fanciers would be surprised if they could go to small shows round Birmingham and the black country, and see big classes of Minorcas (twenty or more in a class), and scarce a poor one among them. Even the Black Leghorn has not ousted the Minorca where it has once taken a hold. Andalusians have been good, but many of the hens are sadly lacking in comb. Anconas, unfortunately, have not

First Prize White Plymouth Rock Hen at Illinois State Poultry Show, Macomb, Ill., January, 1907. Owned and bred by Archie Davis, Tremont, Ill.

made a very brave show. Some beautiful specimens have been seen, but their glory has departed, for the present. Hamburgs are still with us, and at the smaller shows they have been more numerous than in recent years. At several provincial fixtures I have seen classes well filled, and I believe there are still many people who would breed and show Hamburgs with a little encouragement and some protection from monopoly. Campines have not improved their position; and the correspondence regarding type is certainly justified. To the ordinary observer it would appear to be a great mistake to sacrifice saddle hackles and the sexual characteristic of the male for the sake of barring.

None of the French breeds has made such headway. Faverolles are still the leaders, and such handsome birds deserve to be better known.

MUSINGS UPON SPRING AND CHICKENS.

The Breeding and Exhibiting of Thoroughbred Poultry Bring all Classes of Men and Women Into one Fraternal Group—The Care of the Setting Hen and her Brood.

Written for American Poultry Journal by Rev. C. E. Peterson, Pembroke, Maine

Spring, Spring, beautiful Spring,
Laden with glory and light you come;
With the leaf, the bloom, and the butterfly's wing,
Making our earth a fairy home;
The primroses glitter, the violets peep,
And zephyr is feasting on flower and bloom;
Arouse, ye sluggards, what soul shall sleep
While the lark's in the sky, and the bee's on the palm?
The sweetest song, and the loudest string,
Should pour a welcome to beautiful Spring.

—E. Cook. Spring.

And to us spring would lose a great deal of its beauty and much of its glory if at this time the peeping of the downy little chick was not heard in the earth. We watch for the first robin and hail his coming with joy, and how we love to herald the good news of his coming, and our friends listen to us with gladness, for this means, as Solomon so beautifully described:

"For lo, the winter is past, the rain is over and gone; the flowers appear on the earth; the time of the singing of

birds is come, and the voice of the turtle is heard in the land. Arise, my love, my fair one, and come away."

Come away, yes; come away, not to follow the singing of the robin redbreast, but to have a look at those darling little chickies, those little early chicks that have come with the crocus and the daffodil. Come away my love, come away little one, come quickly, for the man will show them to you, and when he does look at those sparkling eyes, so full of anxious delight and tender care, as she cuddles to her bosom the wee little chick, while mother is not any less interested than the child, and somehow or other must put her hand on the downy little balls for she likes the feel, and she fairly brims over with delight as she does it, and how reluctantly she lets the chick go, and how hard to get the child to come away, and the same scene is witnessed again and again every spring, for how quickly it circulates through the village, that some one has some little chickens out, and most every one wants to see them, more than the robin, more than the early flower, more than the budding trees, for who are there on the earth who don't love and admire the newly hatched chicken in all its pristine glory and as attractive and interesting to watch in all its little activities as any living thing I know of?

No wonder that all kinds of people like to raise chickens, rich and poor, learned and unlearned, men and women, in all states of life, and there is no fraternity on earth so democratic as the poultry breeding fraternity, and no bond stronger than the bond that ties them together in their respective love for fine poultry.

Follow us through the Boston poultry exhibition for a little while and let us notice some of the men and women busily engaged talking.

Who is this handsome looking man, with his striking features, in an animated conversation with a seedy looking farmer; the first dressed in the height of fashion, the other in his Sunday best? Who is he? Well, let me tell you. It is the great financier and millionaire, author of "Frenzied Finance," that stirred up a good deal of the world, if not all of it, but just now he is talking chickens and finance is for-

GRAND PRIZE SILVER CUP.

For the third time at Madison Square Garden the magnificent and valuable cup offered by the National Single Comb White Leghorn Club on best cock, cockerel, hen and pullet was won by D. W. Young, of Ridgewood, N. J. Thus, following Mr. Young's remarkable record in this show where America's choicest White Leghorns annually meet in numbers and quality as nowhere else on earth, the winning of this cup was an achievement deserving of the truest congratulation. Size, style and finish, vigor and almost faultless preparation have marked Mr. Young's beautiful Leghorns for many seasons and called forth much admiring praise from judges and experts of the class. Here's to Mr. Young's further success in perfecting the profitable little Italians.—F. L. Sewell.

gotten, and the great financier and the old farmer are on the same level just now, for they both love chickens.

Over yonder is a college president talking chickens with a man that, to our knowledge, never saw the inside of any institution of learning outside of the common school, and whose

grammar; well, we will forbear saying any more. There is one thing that he knows and knows it better than any ten college presidents, and that is how to raise chickens, and the learned man is getting lessons from him and giving lessons, and again they are both on an equal plane for the time being and whenever and wherever chickens is the subject, for both of them love chickens. Just over there, that aristocratic,

BARRED RIGHT. 1st PRIZE COCKEREL. BEST COLORED AND CHAMPIONSHIP MALE CHICAGO. 1906.

middle aged lady, a noted woman in Boston, she, too, is intensely interested in what another woman is telling her; but, goodness sake, where are we? This article is supposed to deal with little chickens and their care, and it is time we leave the chicken and begin with its care. But, bless me, here comes the man who stirred up all Boston with his doctrine of municipal ownership, another financier and politician, but just now, and, for that matter, whenever he is not busy with his calling, he is only interested in those splendid Hamburg fowls, and those blue ribbons are more attractive to him than all the wealth of Solomon in all his glory, for he has won his share of them for the past few years. And he is a stayer; he don't tire of his hobby, and more than that he rides it well, for what he don't know about Hamburgs is not worth knowing. Yes, it is more than true, that in the poultry world we meet all manner and conditions of men and women.

"Who can in reason, then, or right assume
Monarchy over such as live by right,
His equals, if in pow'r or splendor less,
In freedom equal?"

—Milton.

"Children of wealth or want, to each is given
One spot of green, and all the blue of heaven."

—Holmes.

Thus sing two of our poets separated in time by many years, but each recognized what equality means, but neither one of them that in the breeding of fine poultry, fine animals, beautiful flowers and in the love of God's glorious world, with its glowing warmth of color and light and shadows exist the truest of all kinships in the universe.

Have you ever watched the setting sun over on the further side of the village lake, when the water laid so calm and so quiet and not a ripple disturbed it except here and there when a frog would leap, and when it did it only succeeded in throwing showers of liquid glory and gold in every direction.

Watch the great red ball as it falls beneath the lowering clouds, as it crowns them with glory unutterable, with silver linings and fringes of gold, with violet and with purple and with that faint and shimmering green that always seemed to me like melting emerald in a sea of gold.

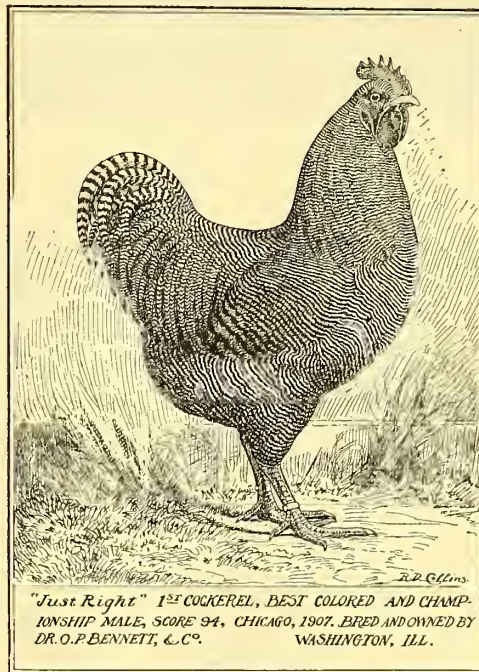

And then, with an eye dimmed by the riches of this wealth of glory, and with the quietness of nature, and the stillness of the evening, and the birds all around me whispering their good nights, and when the mother hen folds in her embrace

the little ones, that not even the Man of Gallilee hesitated to make use of in his great discourse. Ask me, then, is life worth the living, and with heart and soul alive with the beauty of life, I say yes, and a thousand times, for there is no end to the life that is lived close to nature; it begins in it, it goes on in it, and when the day of life is done and slumberland is reached, even the willows over my last resting place will sing my lullaby forever as Mother Nature folds her tired, slumbering child to her bosom. But I am dreaming, yet a dream of delight, so bear with me and from now and on we will speak of little chicks and their care. And I am going to write for the thousand and one men and women whose incubator is the good old mother hen and whose brooders her sheltering wings.

To keep the setting hen clean is, of course, of first importance, as if this is neglected the little chickens will start out in life very much handicapped, and as the first few weeks are of great importance to the chickens' growth, it is well to look after this matter carefully and never take for granted that the hen is free from vermin, even if you cannot see any. So dust the hen with a good insect powder before you put her on the nest, and in a week after that dust her again, and three or four days before the chickens are due dust her again, and the chickens will be comparatively free from vermin when hatched and make a good start in life.

It is also well that a good, motherly hen is selected, one you can handle, one you can lift from the nest without getting herself into a tantrum and scare all the rest of the setters out of their wits, for a hen of that kind is not fit to mother a flock of chickens: She never knows what she is at and will make every chick like herself. I have seen hens used for setters that if you approached the nest, they would squawk and fly off like a wild bird. Now, common sense ought to have told these good people that such a creature was unfit for setting purposes, and many a good setting of eggs bought for good money has been spoiled by a useless setter, and then the breeder who shipped you the eggs gets the blame.

Then, after the chickens are hatched, give them a fair chance; that is, give the hen as much room as you can afford to walk around with the chicks and scratch for them. If you live on a farm and have plenty of land, give her the run of it.

"Just Right" 1st COCKEREL, BEST COLORED AND CHAMPIONSHIP MALE, SCORE 94, CHICAGO, 1907. BRED AND OWNED BY DR. O. P. BENNETT, L.C.^o WASHINGTON, ILL.

BARRED PLYMOUTH ROCK.

Bred and owned by Dr. O. P. Bennett & Co., Washington, Ill.

Keep an eye on her but let her lead the chickens around; that is the very best way to have them grow into strong, robust stock. The great trouble with most purchasers of valuable eggs is that they paid a good price for the eggs and so the chicks hatched must be taken care of. They coop them into a small coop, with a small yard, generally made out of lath, and, by the way, there is no yard made so deadly to little chicks; if the lath are so close that they will keep out intruders they will keep out sunshine as well, and when it rains the lath will get soaked and it will take quite a while before they will dry out, and the chicks suffer in consequence from the damp, unwholesome quarters.

There is nothing so pitiful as to hear the incessant pip of

a little chick which longs for freedom and which spends the day by running around the edges of the coop looking for a way out. Such poor management will never raise strong, healthy chickens.

Where entire freedom cannot be given, close in the hen in a large coop that is rainproof and give the chickens their freedom. They will delight in traveling away from the coop,

MR. BIG BLACK JOE.

Winner of First at Pennsylvania State Show and First at Allentown, Pa. Owned and bred by J. S. Haupt, Easton, Pa.

but never so far but what they will find their way back; and in the evening, an hour before sunset, let the hen out with them. This can be done almost anywhere, even where space is very limited. If I had a garden and must keep chickens out of it, I should much prefer to fence in the garden and let the chickens have the run, than to do what is generally done—fence in the chickens.

I have visited farm after farm for the past twenty years and where land was plentiful, and where a few dollars' worth of fencing would have inclosed all land necessary for successful poultry farming, I found the poultry yarded in a small yard, barren of any vegetation, and in numerous cases a few coops containing newly hatched chickens in the same yard, scrawly and miserable, and is it to be wondered at that chickens don't pay with some people?

As to feeding, a whole chapter might be written, but a few general rules are all that is necessary.

Don't feed the chickens till the next day after they are hatched, and let the first feed be a little fine grit, then dry bread moistened in a few drops of milk is the very best feed for the first week or so, and it should be in a crumbly state, not wet or sloppy. After that feed fine grains and it is much better to buy the prepared chicken feed in the market than to try to mix it yourself, for you cannot do it with the same success and certainly not at the same cost of material where the small grain has to be bought in small quantities.

Green food must be supplied early in the season, and have clean water before them all the time, and never let it remain so long in the drinking fountains that it gets sun warmed. The chicks don't like that kind of drinking water any better than you would and it will induce bowel trouble more than any other cause.

Give a little fine charcoal every day. Pick it out of your stove and save it for the chicks; it will answer the purpose full well.

Also keep a dish of beef scraps before them all the time

and a box of brown middlings will furnish them with some food they like to pick at, and they will eat a lot of it.

If you have an orchard it will certainly pay you to fence it in and give the chickens the run of it till maturity. Better fruit and more of it will be the result and the orchard will be longer lived, and as for the chickens, they will pay you better simply because they will do better.

One season I kept 200 chickens in an orchard that did not cost me over \$25 to fence, and in the back part of the orchard four large yards were made for chickens of different ages and for the separated cockerels, and I never saw such a fine lot of chickens in my life, and how they did grow and go for the fruit that fell from the trees! Well, the chickens got some of it and I got the rest, and it paid me a hundredfold better than if I had done it the other way.

Try it and you will never regret it, and you will come to the same conclusion that I have—that it pays. And I am not the only one.

Provide shade if you have no natural shade for them. This can be done by planting vines along your poultry fences, and where you have only a few chicks anything will answer that will provide shade.

Cleanliness.

Dry, comfortable coops.

All the freedom that can be given.

Wholesome and suitable food.

Feeding a little at a time and no more than they will eat up.

And a genuine love for the business.

These are the few essentials for success with little chickens.

Have a good opinion of your own birds, but don't be prejudiced. Be willing to acknowledge superior merit in other birds

WHITE WYANDOTTE HEN.

Winner of first at New York, 1907. Bred and owned by Arthur G. Duston, South Framingham, Mass.

where such exists. This is for your own good. Unless we can free our minds of prejudice, but little progress can be made.

Do not ship eggs until you are quite sure that a good per cent are fertile.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Mrs. Bessie Schickedantz, Selma, Ohio, and the second prize to Archie E. Van Der Vort, Sidney Centre, N. Y.

STARTING INCUBATOR CHICKS.

Hatching chicks in an incubator is an easy task compared with raising them. Given a reliable incubator and eggs from vigorous stock, anyone with ordinary judgment can get a fair hatch; but raising them! "There's the rub."

There have been hundreds of articles written on the subject, some from dearly-bought experience and others mostly theories. While theories are all right (for the one who originates them) the most of us want facts from actual experience. Of course we cannot all raise chickens by the same rules, for conditions vary, but we may, perhaps, get items from someone else that may be of value in our own work. I have been working with incubators and brooders for six years and while I feel I am not master of the art, yet I know considerably more than I did six years ago, and perhaps my experience may be of value to others.

In the first place be sure the chicks you place in your brooders are from healthy stock and that the eggs have had an abundance of fresh air during the incubation. You simply cannot raise chicks without these two requirements. Of course there are other things, such as overheating, underheating, etc., but these everyone is expected to look after.

An outdoor brooder is best for all purposes. (We are as-

BUFF PLYMOUTH ROCKS.

This grand cock was an easy winner of first at Chicago, 1906, and is the sire of some of the best winners in both the east and west, this season the strong side being for pullets, and I have in my yards eleven of his pullets scoring 94 to 95. He is the sire of my first pullet at Detroit, January 9-14, 1907, scoring 95, by J. A. Tucker. Owned by S. D. Lapham, Dearborn, Mich.

suming you do not have a heated brooder house.) It should be placed in a house of some kind, well lighted and ventilated, until the weather is mild, and in this climate that is not until the middle of May.

Cover the floor of the hover with old clean carpet and have the lamp running several days before the hatch is to come off. Place a thermometer about the middle of the

hover and have the temperature 90° Fahrenheit. When you take the chicks out of the incubator put them in a basket and cover them with a blanket or shawl. If the weather is cold, warm it first. Newly-hatched chicks would not voluntarily exchange a temperature of 103° for that of a cool incubator cellar, as you may learn by watching the little ones under the hen in cold weather.

If there is glass anywhere in your brooder, darken it.

GOLDEN WYANDOTTE HEN.

A World's Fair winner and first hen at New York. Pronounced by leading judges to be the best specimen of the breed ever shown. Bred and owned by Ira C. Keller, Prospect, Ohio.

Place the little chicks in the hover and leave them severely alone for twenty-four hours. Longer than that is better, for they will not suffer for food for several days. Of course you must keep the temperature up, but try not to go much above 90°. After three days you can begin to decrease the heat. The second and third week keep it at 80°, then drop to 75°.

If you do not darken the glass in the scratching room of the brooder the chicks will leave the warm hover and go to the light. After you begin to feed them darken it whenever you want them to go to the hover, or at least until they have learned to run back there themselves. They should stay in the hover almost all the time for the first week.

You should have a dry chick food. I get one especially prepared for starting little chicks, but any good chick food is all right. Give about a tablespoonful for every twenty-five chicks at first.

When you are ready for their first feed uncover the glass and scatter the food over the floor of the feed room. Then raise a flap into the hover and see the little things come out! There will soon be a "tap, tap, tapping" that will do your heart good, and they will pick up the grains so quickly you will be tempted to give them more—but don't do it! If this first feed is in the morning give them the same quantity in the evening. The next day feed the same quantity three times, and the next day four times, and so continue for two or three weeks, increasing quantity gradually. Leave off the chick food gradually, one meal at a time, and substitute something else. Wheat, fine cracked corn, cooked potatoes and cornbread are all good. Give a variety. After a few days give green food, and, when they are well started, green cut bone—if you can get it fresh.

Keep fine grit, charcoal and pure water always before them. If they drink until their crops are full of water, limit their supply.

From my own experience I believe this excessive thirst is caused by too much heat or impure air (sometimes both) during incubation.

When they are about a week old scatter chaff thickly over all the brooder, first removing the floor covering in the hover. (It must have been changed several times before

this.) Scatter the chick food in the chaff on the feeding floor and see them work for it! It keeps them busy and happy. Do not do this at first, for the strongest chicks will get all the food. Clean this chaff out frequently, and after the first two days air and sun your brooder every day—for a short time at first.

Look after the chicks the last thing at night. Be sure the temperature is high enough, and if they are crowded together scatter out.

Fifty or sixty chicks are enough for any brooder. Over-crowding is fatal. Never entirely close the ventilators.

Cleanliness, pure air, dry food and pure water, combined with careful brooding, will do much to prevent the bowel trouble so common and so fatal among brooder chicks—but that is another chapter in itself.

Mrs. Bessie Schickedantz.

Selma, Ohio.

SETTING HENS.

My experience in setting hens has been very successful and I most sincerely hope this little article will be of benefit to at least some of the readers of the "old reliable American Poultry Journal."

One of the first things, select a suitable place, where wind and rain cannot enter, and where there are no rats. Don't try to set a hen in the house where you keep your other fowls. No matter if they are shut in the other fowls will

As soon as the chicks begin to hatch I remove them to a basket and keep them where it is warm until all are hatched, when they are placed with the hens. It is best to set as many hens as possible at the same time, so when the hatch is completed, two broods can be put with one hen. I put 20 chicks with a good-sized hen if the weather is warm, but in colder weather about 12 are placed with a hen. Dust your hens thoroughly with a lice powder before placing the chicks with them and repeat weekly until the chicks are well feathered.

Archie E. Van Der Vort.

Sidney Centre, N. Y.

LINE-BREEDING.

The Method of Establishing and Maintaining a "Strain" of Thoroughbred Fowls—The Proper Plans—Methods of Mating as Practiced by the Experienced Breeder—Only Birds of Strong, Vigorous Constitution Should be Used as Breeders.

Written for American Poultry Journal by T. F. McGrew, New York City, N. Y.

The irresponsible use of the term "strain" for a flock of hens that may be owned by anyone has almost cast the shadow of shame on the faces of those who fully understand and value the name for its true meaning as well as the real

Scene on the Suncrest Poultry Farm, Rush & Kramer, proprietors, Grand Rapids, Mich.

bother them and cause them to be uneasy, break their eggs and the result—a poor hatch.

For nest boxes I use cheese boxes, which can be procured here from the grocers at 5 cents each and in some instances for the asking. These boxes, being round and low, insure the eggs from being broken by the hen jumping down into the nest. I place some slightly-moistened earth in the bottom of the nests. Then fill the nest as full as you can of fine hay, packing it very firmly and sprinkling a good lice powder thoroughly through the hay. After every hatch destroy the hay by burning and replace with fresh hay to guard against lice and mites. After filling the nest with hay place some china eggs therein. After dark get your setting hen, dust her thoroughly with lice powder, place her gently on the nest, cover her with something (I use a splint bushel basket) and let her set. Put a box of road dust for her a dust bath in the room. Have plenty of clean, fresh water, corn and grit always accessible to them. On the following evening uncover your setting hen. In the morning she will come off to eat and will return to her rest. Let her set until she thoroughly makes up her mind to set all right or not, then place from 13 to 17 eggs (according to the size of the hen) under her. I have had as many as 18 hens setting in the same room with no disturbances and no broken eggs. Try this method and you will have no broken eggs and it is not the hen's fault if the eggs do not hatch, it depends somewhat upon the fertility of the eggs.

In my experience Plymouth Rocks or Wyandottes make the best setters; they are not so liable to step on and break the eggs as a heavy Brahma or Cochins, which are generally clumsy. Study your hens; find out which are the best setters. If a hen fools you once, she will be likely to do it again.

value it carries when honestly present. When one can sustain a breed of fowls upon his yards and produce hundreds of them each year, and never add to his flock a male bird for new blood for over eight years, he may claim to understand line breeding, providing advancement has been made each year in all directions where improvement was desired.

Line breeding is to produce, in direct line, year after year, from one common source or progenitor. A strain is the result obtained from continued line breeding that has established both the breed characteristics as well as a family resemblance in the descendants. It is quite possible to line breed and not establish a "true strain"—a well established fact, the working of which may be seen upon a farm where a large flock of fowls may be found, all of which have descended from one common progenitor, or, again, in the yards of some breeder who has continued unsuccessfully for years to breed from the product of one original trio. Because we may have bred in line after this unguided fashion will not give us title to the right of claim to a strain.

Line breeding to be of value must start from a very solid foundation if size and vigor are to be maintained, for in the loss of either failure is assured. More ailments come to our flocks from lack of constitutional vigor than from all other causes. A male of declining vitality, caused by lack of constitutional vigor, is more to be dreaded than ailments of any bird that show their ravages as they go. Such a male sows the seed of future destruction; the dreaded disease kills as it goes; the one robs us of our present hope, the other undermines our future. For these reasons select for the upbuilding of a strain specimens of extraordinary vigor as well as quality.

We should prefer for our start the very finest specimen of

a male possible to obtain, but we should not allow quality to blind us to other faults. Size and vigor should have equal consideration, because on these we must depend in future years to sustain us in our effort to establish quality upon a lasting foundation that will not crumble beneath our efforts and end our labor of years in failure. With equal care we should select three hens and three pullets, if possible the

Wopsy Girl. Value, \$50. Band No. 61. She laid 243 eggs in 365 consecutive days. Eggs averaged 1 lb. 10 oz. to dozen; in other words, she laid over five times her weight in eggs. Bred and owned by J. W. Parks, Altoona, Pa.

pullets of the same blood as the hens. The hens alone we should breed to the male, holding the pullets in reserve for another year. To fully succeed in the producing of a strain by line breeding, and to sustain it, we must begin right and follow a set rule within the lines of nature.

Proper Plans.

In planning for the future do not overlook the present. It might be well for you to placard your houses with the following plan:

- Be absolutely certain as to the male.
- Start with the best hens to be obtained.
- Hold in reserve three pullets of equal quality.
- Plan to intermingle this blood for benefit.

The selection of a male to father all future progeny of the contemplated strain is a task of vital importance. Many think a number of males necessary for the work in hand, but this is a mistake; one of the right quality is better than a number. In the selection of the male a number of points must be considered, but first of all must be true breed characteristics. This includes the true form or shape, the proper head belongings and every feature that stamps upon him his breed or family characteristics. This is one feature in breeding that is much too often overlooked for color. When good color is obtained from such we may find shape gone when most needed. For this reason start with the best shaped specimens to be found. Following this in importance is size, with which must be joined constitution and vigor. Do not confound size with weight. Size should mean just what it indicates, and should not be determined by weight. A bird of proper size is one that is beautifully proportioned in all sections to the limit of size within which the proper breed formation can be maintained. (This same rule should govern small size in Bantams, which can be so small as to lose their breed formation.) This proper size, coupled with good lung power, strength and vigor, fulfils the second requirement for success.

Color, as one-third of the standard demand, is the third consideration, but in considering it remember that it is most in evidence all the time, and has by far more consideration at all times than is indicated by its numerical proportion. There is but one rule to follow in this, and that is to have the very best color at all times upon your breeding birds that is possible to obtain within the rule that governs color possibilities with the breed and variety you select. It should be well understood at all times and with all breeds that it is quite as important to have good color as good shape, and vice versa; for it is only possible to have the best in this way.

These same laws should govern your selection of the females. The real value of the hen as a factor in the upbuilding of a strain cannot be overestimated. Under-

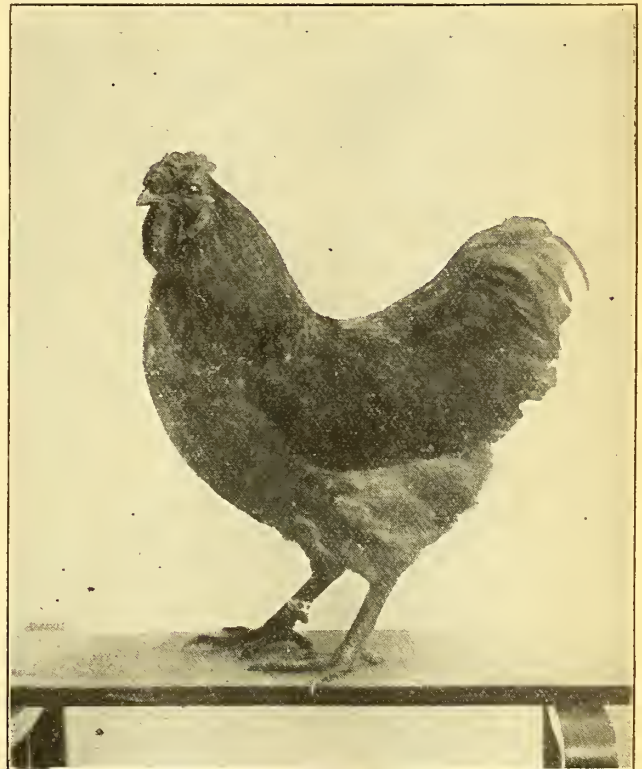

standing this, it is also well to remember that size and general makeup is very largely influenced by the hen. While color and finish comes largely from the male, who yields great influence over comb, head points and its belongings, including the eyes. All these features must have your consideration at all times while guiding your matings toward the future. The proper consideration and study of these points saves to your flock the constitutional vigor you so much need.

Beak, shank bone formation and muscle must come in for continual attention. Color and finish are the important factors with the former. Bad color and rough, unfinished shanks can be as thoroughly bred into a strain as any other feature, the obliteration of which should be guaranteed by its total absence at the start, backed up with continued care. Good bone formation assures strength and size; the proper muscles build out the wing bows, giving the broad shoulders and widening the thighs, preventing the narrow breast and contracted knees which give the pinched appearance. Those who pay strict attention to all these points from start to finish should succeed in building and maintaining a valuable strain of any breed or variety they select.

Methods of Mating.

In the three hens selected you have matured size, form and color. As hens they should show their full qualities in this line. If any shortcomings have been hidden under the bloom and glow of youth they usually develop in the hen. For these reasons hens are most desirable for breeders for this purpose. Then hens, mated to the selected males, give you three distinct lines of blood in their offspring, all of which should be carefully toemarked so as to indicate the mother hen. As the chicks develop you will readily discover the best producing pair or the pair that may produce the best males and another pair that produce the best females. All this knowledge is of vast importance in the matings to come.

No trouble is experienced by those who have full knowledge of the real producers of quality, providing they have that quick perception that prompts them to grasp the advantage presented and perpetuate its valuable influence into

"GOLDEN ROD."

Buff Wyandotte cockerel, winner of first at Rockford, 1907. Score, 94½. Owned, bred and exhibited by Charles Howison, Sandwich, Ill.

future products. If one line from a single hen is by far better than all the rest, select this apart for future use, discarding all the balance; and to aid in your work secure, if possible, a full sister of the mother of the best, the product from which can be used for maintaining strength and vigor.

To follow your matings in this line, breed together the

second year brother and sister, the parent pair, also the full sister of the hen, of the best you can secure, with the original male. This gives sons and daughters of the original pair to make use of the third year for pairing with the product of the second year. Thus you should proceed each year. When selecting the product of the year always assure yourself as to the pair that produces the best, and

"Irene." White Wyandotte pullet, third at Louisville, Ky., 1905. Score, 95%. Mother of many winners. Bred and owned by Ira B. Sleet, Warsaw, Ky.

make use of them alone the following year to produce separate or new blood for strengthening your lines the following year.

If you have a well established line do not disturb it by bringing in new blood through a male. Always depend upon the best females you can get. If, however, you are weak in the quality of your males, secure the very best male you can find and mate him to one or two females of your own line that you know have produced the best males you have bred. If in this way you get better than formerly, it will be safe to make use of one or two of the best of these males. Work them continuously into your flock and watch the result, for a wrong move may bring very bad results, which may be quickly remedied if but few of the new have been raised.

Good results may come from migration; as, for instance, a man in Michigan may toemark five or six fine cockerels and send them to a friend in New York or Kansas to keep for him. When returned a year later as cock birds they will have gained the vigor that comes through climatic changes and the soil. Sheep are thus treated in England. Buck and ewe lambs are sent from the low countries of England to the highlands of Scotland to stay a year or two. They are then brought back for use in the same flocks from which they were sent, giving the advantage to be gained from migration.

Birds of the same family will return year after year to their haunts of the year before. Their apparent familiarity with the surroundings prove their identity. They seem to inbreed continually, but gain their vigor and constitution from migration and the continual weeding out of the weaklings from the labors of so long a journey and from strife and battle for the possession of the fair ones of the flock. These same causes keep the weak, puny birds and animals of all kinds in their wild state from casting their reflection for injury. They are usually beaten back and down by their stronger opponents.

HATCHING AND REARING CHICKS.

Hatching and rearing of chicks is a subject which is occupying the minds of the poultry keepers at present perhaps more than any other subject, as during the months of April and May large numbers of chicks are hatched. The amateur is studying articles and experiences of others, while the professional or more experienced poultry keeper is looking over his past experiences for the purpose of avoiding past mistakes and repeating his past successes in order to make this the most successful of all seasons.

As I have had some experience in hatching and rearing chicks, I thought perhaps I might write something of interest to others.

I have quit fooling with the stubborn, fickle-minded old hen who leaves the nest, tramples and breaks the eggs, and sometimes tramples the chicks to death. By using the incubator and brooder we can avoid all these things and also the lice that take so many of the little birds, and we do not have to wait for the hens to get broody, but can set the incubator whenever desired and keep the hens laying.

The first essential thing is good, vigorous breeding stock. I do not use eggs from my general flock, but have breeding pens which are composed of the cream of my flock as nearly as I can judge. These pens used for breeding purposes are fed on whole corn, oats and barley and occasionally a mash in the morning consisting of ground corn, barley, oats, wheat and cut clover. To this is added a little condition powder, which gives them vigor. They are also given shells and meat.

I gather eggs in cold weather three or four times a day to keep them from getting chilled. After we have the eggs and the time arrives that we want to set them, we begin getting the incubator in shape. I have obtained the best results by operating the incubator in the cellar, after trying it in the kitchen and upstairs. The temperature is more even in the cellar, not being effected by sudden outside changes.

The incubator is placed as nearly level as possible, whether a hot water or hot air machine. It is run without any eggs until we have it running at the right temperature, which is about 102 to 103 degrees. Never allow the temperature to go above 103 degrees if possible after the eggs are in the machine, as this weakens the embryo.

The eggs are placed in the incubator in the morning; then we can see that the temperature is all right. After you have the regulator once set do not change it, but regulate with the lamp. The lamp is trimmed at 7 a. m. and at 7 p. m. daily. On the third day the eggs are cooled from five to ten minutes and turned before placing back in the machine. After the third day they are turned and cooled twice a day

Cockerel in display pen at Madison Square Garden, New York, and Boston, declared by the leading judges to be the finest specimen they had ever seen. Bred and owned by John L. Dakin, Roxbury, Mass.

until they begin to peep. They are cooled from ten to twenty minutes, according to outside temperature. On the fifth day they are tested and the unfertile eggs taken out, and the doubtful ones are marked and tested again on the ninth day. At hatching time or after they begin to break the shell, keep the incubator doors shut until the hatch is all over. When it is about time for the hatch to come out the

brooders should be warmed up to the right temperature—90 to 95 degrees under the hover. In about twenty-four hours after the hatch is over the chicks are removed to the brooder. I use both kinds of brooders, indoor and outdoor, but I think the indoor is best.

I place the indoor brooder in a colony coop 5 feet square and 3 feet 8 inches high in front and 3 feet high in the

"White Chief," grandson of "Irene," first cockerel at Vevay, Ind., December, 1906. Score, 94½. Bred and owned by Ira E. Sleet, Warsaw, Ky.

rear. The roof is covered with tarred roofing. A door and a window is placed in the front side of the coop, then during stormy weather the chicks do not have to be confined to the brooder, but can run on the floor of the coop, which is covered with chaff or some other scratching material.

The chicks should be given their first feed when about thirty-six hours old. I give them fresh water when about twenty-four hours old. They should have their water placed in fountains made in such a manner that they cannot get wet, as this causes chilling and crowding, and this will cause bad results. A good drinking fountain can be made by inverting a tin tomato can of water in a saucer. Cut two or three nicks in the can to allow the water to come out.

I feed a dry chick food which is made by some reliable firm. I prefer this food to any other, as it is made of seeds, cut grain, beef scraps, grit, etc., in the right proportion to supply the needs of the chick. It can be fed in the litter, which induces the chicks to exercise. I keep fresh water before them all the time.

After the chicks are a week old the temperature is gradually decreased until, when five or six weeks old, the brooder is removed from the colony coop and the chicks then roost in the coop.

There are yards made of poultry netting around these coops in order to keep the chicks from wandering away. The chicks are kept in these coops until sold or placed in their winter laying quarters. J. Lee Farnham.

Waldron, Mich.

SUCCESS WITH BROODERS.

I have been very successful with brooders, and although I am not an old hand at the business I may mention some things which will be of help to the beginner. Before putting chicks into a brooder be sure that the heat under the hover registers 90 degrees and is running evenly. In cool weather care should be taken at night to raise the heat a trifle, or in the morning you may be surprised to find that the heat has dropped several degrees. If the brooder has a regulator arranged over the hover so as to regulate the heat you will not find a great difference when you look at it the next morning. There are a good many brooders on the market, and some are good and others are bad. My advice would be to look over the "ads" in the poultry journals and write for a catalogue from some of the manufacturers, and then get a brooder with a scratching-shed annex, as you will find it handy on a rainy day—that is, if you choose an outdoor brooder. Don't buy a cheap brooder. Get a good one, as it pays. I cover the hover chamber floor with sand, as it acts as a fine grit and chicks will eat all the small, bright stones, which prepares and hardens the gizzard for the food which comes later. Cover the scratching shed floor with chaff from the barn floor and scatter a few grains of chick food, which comes prepared and is usually balanced right, so that the beginner need not worry about getting the right

amount of different grains and seeds to supply the chick with muscle, bone and feather-forming material. When chicks are first put into the brooder I fill a fountain with slightly warmed water and dip their bills in so that they will learn to drink, and I think it is something they need on the start.

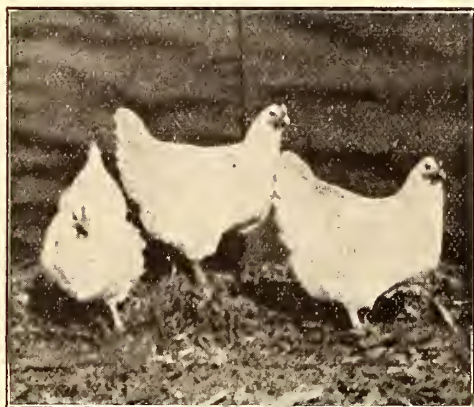

The causes of bowel trouble are many, such as improper feeding and chicks getting chilled. Keep them busy by throwing the feed into the litter, and see them hustle to get it. I would never put more than thirty-five chicks into a brooder, and I think there is one mistake which causes trouble for the beginner, and they are not always to blame. If you buy a brooder of a manufacturer and he tells you it will hold a hundred chicks, you naturally would think that he ought to know. Take my advice and don't put in over thirty-five if you want them to do well. Give them plenty of room, as they are like plants in a garden. They never grow well unless they are thinned out. The brooder, if managed rightly, will raise just as strong and large chicks as a hen and is less troublesome. A hen may step on a few chicks and kill them, but a brooder cannot do this very well and will stay in one place unless it is moved. It is never lousy, when new, like a hen, and can be kept clean and comfortable with proper care. Try and keep your new brooder free from lice and don't put hen-hatched chicks into it unless there are no lice on them—and they are very apt to be lousy. Put one lousy hen-hatched chick into a brood of incubator chickens, and in a few days the fun will commence, although it is no fun to get rid of lice when once they make your acquaintance. Give the chicks plenty of fresh water and good, wholesome food. Never feed any moldy grain or sloppy food. I should keep them in the brooder for three days, or until you think they are strong enough to let out of doors, and then let them out only on nice days until they get accustomed to the conditions outside, and feed a little green food at first, such as chopped lettuce or cabbage. They like it and will look for more. I keep them confined to small runs 4 by 20 until they get used to the surroundings, and then take the run away. They hardly ever go very far off, and if you should move the brooder away, at night they will go

First prize White Plymouth Rock cockerel at Ann Arbor, Mich. Score, 95½, by Tucker. Bred and owned by E. C. Zoeller & Son, Jackson, Mich.

right to the spot where it stood and peep for all they are worth. When they are about two weeks old I commence feeding a little beef scrap and I also put in a hopper of dry bran. The hopper method is all right and I, like a good many others, I suppose, had little faith in it. Clean and air the brooder as often as possible when the weather will permit, as the sunshine works wonders in purifying the

inside, and if any lice appear spray the inside with a solution of 5 per cent carbolic acid and use a good lice powder on the chicks, or get an ointment for "lice on chicks," which comes prepared. Such articles will usually do the work better than something you would prepare yourself and guess at. When the chicks are three weeks old give them whole wheat, hulled oats, fine cracked corn. See that plenty of grit

Three White Rock Beauties. Bred and owned by J. A. Bickerdike, Millersville, Ill.

is kept before them at all times, and a little charcoal helps to keep the bowels regular. I do not keep sand in the brooder all the while, as it takes a good deal of sand. I only use it a couple of weeks, and each time when you clean it out take a fine sieve and sift the droppings out. This can be done in a few minutes. After two weeks you can use chaff instead, and it will absorb all the droppings and can be cleaned out easily. I have not mentioned the names of any brooder manufacturers nor of persons putting up lice powders, and I don't want anyone to think I am getting paid for it. Very respectfully yours,

A. E. Crandall.

THE SITTING HEN AND HOW TO SET HER.

As the hatching season approaches the problem of the sitting hen again confronts the poultryman. To so set her that she will go through the period of incubation in the best of condition and bring off a successful hatch is oftentimes more easily said than done. Much depends on the hen. Some hens will sit anywhere, while others are rather indifferent sitters under the most favorable conditions. But it does not all depend upon the hen. Various methods for properly setting the hen are employed—some good, some decidedly bad, and others that can be recommended only under certain circumstances.

In the first place, the hen should not be abused because she sits, and she should not be abused because she will not sit under the conditions with which she is frequently surrounded. In either case she is only obeying a natural instinct, and abuse and unkind treatment will not change those natural inclinations in the least. The hen is only made unfit for either sitting or laying by such treatment. Kindness, healthful surroundings and careful handling will do more in a week toward getting old Biddy to attend strictly to business on the nest or to break her up and put her in shape for laying than all the abuse that can be heaped upon her in a lifetime. However, you set the hen; let her know that you are her friend; that she has nothing to fear from you; and you have done much toward accomplishing the desired result.

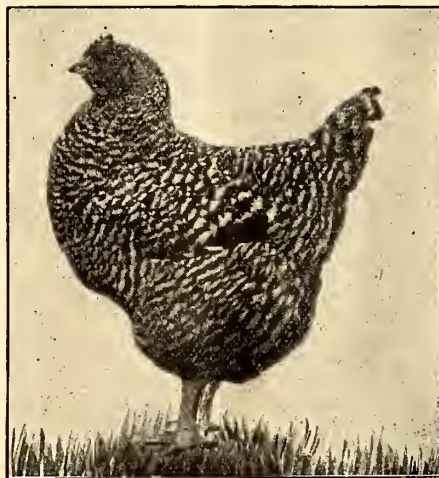

After the hen shows broody inclinations she should be allowed to sit several days, until she becomes fully convinced that she wants to bring out a brood of chickens. If the attendant has the time to look after her she may be set in the same nest, but should be enclosed so that the other chickens will not get in and disturb her and break the eggs. This will necessitate taking her off every day to feed and water, and will also require watchfulness and care to see that she goes back on the right nest. We have brought out many and many a successful hatch in this way, but it required most too much time for a busy person, and if one has his mind on his chickens it is apt to cause more or less worry. As can be readily seen, this method requires strict attention to business on the part of the attendant. This may be partially overcome by having the nests in the parti-

tion between the laying and sitting rooms, open at either end and fitted with a sliding door that can be opened or closed at will or reversed from one end to the other. In this way when a hen commences to sit the door opening into the sitting room may be removed and inserted in the opposite end, thus shutting the Biddy out of the laying room and also preventing laying hens from getting into her nest and causing trouble. It may be improved by having a door for both ends so that the Biddy may be enclosed in the nest if need be. Further improvements may be made by partitioning the sitting room off into small rooms or pens, one for each Biddy, in which she may feed, water and exercise. In this way there is no danger of other hens getting into her nest or of her getting into the wrong nest. It will greatly lessen the trouble in looking after the sitting hens.

Another method which we have found most successful is to set each hen by herself in a small coop, with a yard before it containing from six to eight square feet, the coop about eighteen to twenty-four inches square and high enough to permit the hen to stand up. These coops may be made any style desired to suit the individual, but should have a tight floor and fitted with a door so that they may be closed at night and on cold, windy days. About fifteen years ago we made some coops of the inverted V-shaped style, with a yard of lath, sawing the lath in two and making the yard the square of half the length of the lath. Since that time we have tried a number of methods, but none were as successful as this. After the chicks hatch the coop is cleaned out, treated for vermin and old Biddy allowed to brood her chickens therein. Last year we sent away for plans covering a system somewhat like this—at least carrying out the same idea. The yards may be made of poultry netting and any size desired, but one containing from six to eight square feet of floor space is sufficient. The coops can be made of old drygoods boxes if economy is an item. Covered on top with tarred paper, well painted, these will last a number of years.

In the early part of the season it is best to set the coops under cover, but as the season advances they may be placed out under the shade of some tree—a grass-covered spot is better, so that the Biddies may get a few blades of grass at will. The coop should be moved about as occasion demands. Except on very cold days and at night the doors of these coops may be left open the entire time and the Biddies allowed to go out and in at will, and almost invariably they will bring out a successful hatch. It comes as near to nature's way as artificial means allow, and will be found more successful, as there is no danger from storms and marauding animals.

A word about the preparation of the hen for sitting and the care while sitting. The day before she is to be set take her from the nest and, holding her head downward, thoroughly sift into her feathers some good insect powder, run-

Idle Gossip, who only laid thirty-seven eggs in the entire year. This illustrates one of the many good features of the trap nests. Note the difference in shape. Owned by J. W. Parks, Altoona, Pa.

ning the fingers down through the feathers to make sure the powder gets well distributed. Make the job as thorough as possible and then let her off for a good run. If she is to be moved it is better to do it at night and then keep her enclosed in the new nest until the next evening or the morning of the second day. In about ten days again give her a good dusting with insect powder, and again a day or so

before the chicks hatch. If possible provide a dust bath where she may dust herself at will. This treatment will in most cases insure against lice. Treat the coops to common kerosene if mites appear.

The sitting hen should be fed and watered regularly, but care should be taken that she is not overfed the first few days of incubation, as it is almost certain to result in bowel

Parks' Ideal, a nine-month pullet, and the promise of a 200-egger. I have been breeding for this type for years. Bred and owned by J. W. Parks, Altoona, Pa.

trouble. Feed lightly and it will do no harm if old Biddy is a little hungry. After she gets thoroughly settled down to business she is not so apt to overeat. Feed whole grains, such as corn, wheat, oats, barley, etc., a small handful once a day being generally sufficient. If a Biddy appears very hungry and uneasy as a consequence feed more. In this, as in anything else, try to be reasonable and do as conditions and circumstances seem to warrant. Grit should be supplied at all times and green food once or twice a week if the hen is unable to get it herself.

A piece of sod or fine moist earth is good for a nest foundation. This should be covered with straw or leaves and the corners of the nesting box well filled so there is no danger of the eggs becoming scattered. Should the nesting material become very dirty it should be renewed, except the sod or earth.

Eggs that get very dirty may be washed with warm water and quickly wiped dry. A little dirt will do no harm.

L. B. Gardner.

Atlantic, Iowa.

THE FEEDING OF CHICKS HATCHED IN AN INCUBATOR.

As the care of the young chicks will probably fall upon the majority of the household sisters this spring and summer, I will give my way of rearing and feeding chicks hatched in an incubator.

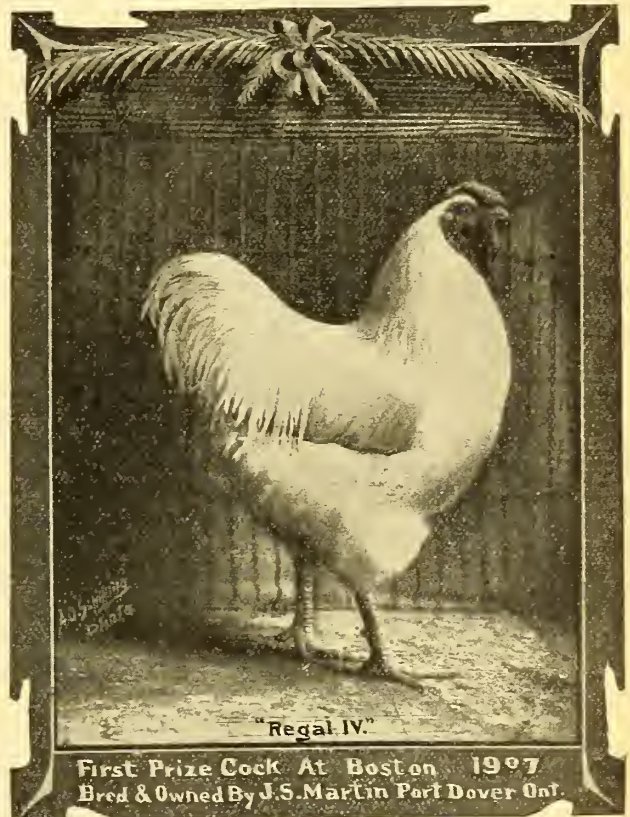

We must be very careful not to get careless from the very beginning if we do not want to make a failure of raising chicks. I get my brooder ready for business a few days before I need it, and when I see that the hatch is about half done I start the lamp in my brooder, as it takes a long time to get it warmed up for the first time. I take as much pains to have the brooder comfortable as I take pains in having a room comfortable for my company. When the hatch is over and the chicks are dry I take them out in a box or basket in which there is a warm cloth. I take them to my brooder, which for real early chicks I have in a room. I leave them sleeping for at least twenty-four hours or longer, but I watch very closely that they do not get chilled or too warm. I do all I can to start right. Then I know it will go right.

The first feed I feed is dry oatmeal, which I find they will learn to eat quickly. I put on shingles. I warm some sweet milk, put it in a clean tin can with a few notches cut in at the top and invert a saucer over it, and quickly turn, and set it in the brooder on a piece of two-by-four or brick. This is done in the late afternoon. Then the next morning as I go out by daylight they are ready for their breakfast. I turn up the light a little and feed them more oatmeal and

some more warm milk. We will save more chicks by giving them warm skimmed milk than by any system of feeding grain, to my way of thinking. Charcoal and fine grit is placed before them, also a small box of dry sand. You will always find some chicks in that box of sand. I start this morning by feeding at about 6 o'clock and feed every three hours regularly. I feed for the first week oatmeal, cracked corn and millet seed. I keep feeding on shingles for about three days; then I feed in the litter and make them work for it. In the winter I save the bread crumbs from the bread box and board, which I dry and put in paper sacks. That comes in fine for the chicks after they are four or five days old. I soak the bread crumbs in sweet milk and press it as dry as I can. When I feed it it is just fun to see them run. By the time they are five days old I have a little yard out of the brooder two feet square. This is where I feed them except on very cold mornings. I clean the brooder every other day after the fifth day, then every day after they are two weeks old. The second week I feed the same, except that I add hulled oats, and as they get older I feed cracked wheat. I chop the potato peelings fine with a baking powder can and they relish them.

As soon as I can tell the different sex I divide them, the pullets for early layers and the cockerels for broilers. This is done at about six weeks. By this time the weather is all right to put them in coops, each in their own yards. The cockerels are fed in hoppers and given bran, wheat cracked corn, hulled oats, beef scrap, grit and charcoal, green food once a day, and fresh water three times a day, also milk. I have tried other ways, but found this way the best. They will be ready for market at nine weeks old. Now for the pullets. I feed different. I have a hopper for bran, beef scrap and grit, and feed them three times a day on wheat, cracked corn, barley, hulled oats; fresh water three times a day, and all the green stuff they want to eat.

September 10 my new henhouse was done, and I divided

WHITE WYANDOTTE.

First prize cock bird at Boston, Mass., January, 1907. Bred and owned by J. S. Martin, Port Dover, Ont.

them into lots of twenty-five, as I knew they were soon going to lay. Then I started to feed them a mash in the morning of bran, cornmeal, steamed clover, beef meal, and for the rest of the day they had cracked corn, wheat and oats. September 19 they started to lay, and have been doing well since.

The Importance of Type.

Unless American fanciers speedily return to consideration of and adherence to type and breed characteristics in form and shape a number of breeds will finally go out of the hands of breeder and fancier. No other one thing within the industry is of so much importance at this time. Already a number of breeds have been ruined and practically placed aside for the reason that type and form has been sacrificed for color markings. Not many years ago the Light Brahma was one of the most profitable breeds of fowls. They were great egg producers and a splendid market fowl. That was when they were bred true to the original Brahma type. They were long bodied, not too heavily feathered, and active. Then came a departure. Breeders thoroughly Cochized this grand old breed. Such specimens were favored by judges in the

eastern shows, especially at Boston. It was not long until this Cochized Brahma was in the majority. Then came a falling off in the egg production of the breed and a decrease in its value as a market fowl. To-day the Light Brahma is seen but little and in a majority of the exhibitions not at all. Killed by a departure from true type.

The Indian Game, once one of the leading classes in all shows, dropped out when breeders insisted upon getting this breed up on legs as long as the exhibition game. Another breed killed by departure from true type.

Years ago the Houdan was a long-bodied fowl, of the Dorking type. It was a prolific layer of very large eggs. To-day the few seen in the show room are short of back, of the Polish form. Killed by a departure from true type.

Cochins, once the pride of the fancy and the most attractive feature of the show room, are now seen in very small numbers. Outside of a very few breeders who have adhered closely to type fanciers have been getting the Cochins higher up in the air. To-day but very few choice specimens are shown. Another case of the folly of departure from true type.

The Golden Wyandotte has been practically removed from the Wyandotte class, so far as form and shape—type—is concerned. To-day they are found, a majority of them in the show room, with long bodies and fairly good Rock form. A beautiful and valuable variety severely injured by a departure from true type.

To-day we find Minorcas of two distinct types in the show room—the original and true Minorca type and the irregular, stilty kind. If the true type class does not win out with the fanciers the breed is doomed.

The Langshan was for several years one of England's most profitable and popular fowls. Now the "modern Langshan" is up on legs as long as those of a sand-hill crane. Result: Langshan not a factor in English fancy. Another killing by a departure from true type.

To-day there are a number of our most profitable and popular breeds that are in great danger. This fact is so plainly evident that it does seem as though American fanciers would halt in their mad race away from type, and that this most important of all considerations would receive their thoughtful consideration. Let us consider the Wyandottes as we find them in the show room to-day. We must here record the fact that a vast majority of the specimens shown are far from conforming to the true Wyandotte type. In such shows as New York, Boston and Chicago we annually find not only several, but many different types of Wyandottes. As a rule the specimens shown are long of body and removed many degrees from the rounded outline wherein a Wyandotte should stand. It is plain that the selection is made for color, not type. It is done to please the judges who are controlled by the new popular demand for color. The White Wyandotte and the White Plymouth Rock are now in a close and exciting race, and the White Rock, which is being bred true to type, will win out as sure as fate unless the White Wyandotte breeders return to a consideration of type. There can be no other result.

Practically every bred in the Standard is suffering because of the failure of

fanciers and judges to stick closely to type. How much longer is this condition to exist? Let fanciers pause and give this fact thoughtful consideration: In all the world no profitable breed of poultry has gone out of existence for any cause other than a departure from true type on the part of breeders and fanciers. Let American breeders get this historical fact firmly in their minds.

It is high time type received proper consideration. The interests of all concerned demand it. The life of several breeds is dependent upon it.

—o—

A gentleman who was opposed to the reorganization of the American Poultry Association on lines as laid down by the committee of fourteen said at the Auburn meeting that there would not be a branch association organized in ten years. Within thirty minutes after this remark was made New York state fanciers organized a strong branch. The Pacific coast fanciers followed. Now the Mid-West branch (Iowa, Illinois, Indiana, Missouri and Michigan) is just booming. President Thos. F. Rigg and Secretary Fred L. Kimmey report that breeders within the territory embraced by the branch are enthusiastic in their support of the measure. What was it we heard about New York state dominating affairs? Just a whisper.

* * *

Two business men in an Iowa town, while on the way to their stores one morning recently, passed a yard wherein was displayed a sign board, bearing these words: "Wanted: Setting Hens at \$1 each." One of the gentlemen remarked that it should read "Sitting" instead of "Setting." The other disagreed. Words followed, then blows, and these two good citizens instead of going to their places of business were taken to the police court, and each fined \$10 for disturbing the peace.

* * *

Over in England there is a fight on between the so-called professional fanciers and the amateurs. The latter are complaining bitterly that the former are winning all the prizes in the show room, and have petitioned the show management throughout the kingdom to enact certain laws. "Enact laws so we can succeed" has been the cry of the unsuccessful in every land since the dawn of creation. The way to succeed is to succeed. Every fancier must work out his own destiny.

* * *

The fruit and poultry farm, near a city or large town, is a proposition which is becoming a very practical and paying one. For the man who is willing to work and who has a natural love for the work it affords, we believe, a comparatively easy, profitable and altogether satisfactory life occupation.

* * *

Fate is dealing the American Fancier some hard blows. The company printing plant at Johnstown, New York, was destroyed by fire and "Drev." is confined to his bed by sickness. We trust the Fancier will be able to shake off the ghost which has been on its heels for more than a year.

* * *

Plant some trees and shrubbery this month. Do this for your own sake, for the good of your poultry and for the benefit of those who will come after you.

Facts and Fancies.

Written for A. P. J. by D. Lincoln Orr.

"Some people can only be aroused by a brass band of fifty pieces playing a ragtime; others are touched to tears by the ripple of melody from a bird's throat. The difference is in the man."

"The difference is in the man." What a volume the above sentence means. Think it over carefully. Some men start in the poultry business with the single thought of getting rich; they can hear nothing but the brass band and they don't remember a single measure after the sound dies away. Others, while they are not forgetful of the business side of the enterprise, are charmed by the simple sweet melody that sounds through their whole system and, long after the melody has ceased to charm their physical ears, the sweetness still rests in their memory. Success is only achieved by being in love with the object. The old saying "that true love is of the soul, and the soul never dies," applies to poultrymen. A love for the business and close application. Studied cause and effect will bring one to the top of the ladder if one has ability. I was asked the other day what it cost to go in the chicken business. I replied it was really hard to tell till you have been in it fifteen or twenty years. It may not cost anything, and it may cost a great deal.

Poultry shows are a great educator, a great advertiser and great socially. I enjoy them hugely. But there are many things that ought to be changed and will be changed, and, from my point of view, the greatest difficulty is in handling some of the exhibitors or their friends at the show during the judging. While I have absolute faith in judges, I think every and all judges should in good, plain English, refuse to talk to any one while judging. It gives a chance for the loser to "holler." An

interested party will say to the judge that is so and so bird. I notice that number so and so is disqualified and so on. We have read a whole lot about judges, but I think the exhibitors should be taken in hand. They have no business in trying to influence a judge. And show secretaries ought to be more plain in dealing with these kind of exhibitors.

Again, many show secretaries make a big exhibit themselves. I do not know any law forbidding it. While superintendent of the Newburgh, N. Y., show, I made a big entry. I should never do it again; it creates a feeling, and often hurts the show. It should be stopped. A secretary is in a position to know how many to exhibit, and one or two more birds in a class might bring him in a big special. The outsider does not have that knowledge, and is therefore handicapped. Then again, a judge, though honest in his awards, is more or less fonna fault with because of the prizes the secretary has won, especially if the secretary should happen to get the lion's share, and my advice to all secretaries is to keep out. Don't show for competition.

To say the least, there are a lot of nasty exhibitors going the rounds, and the talk and rumors floating around the show room is disgusting, and I often wonder and wonder why people will so lower themselves as to start such gossip. If one has actual proof it is not only their privilege, but their duty, to bring the matter before the proper authorities and back it up, but if you have not the proof, then keep your mouth shut.

There is a vast difference, however, in a good, honest argument over a difference of opinion as to the real merits of two birds, and casting slurs on a judge behind his back that he was crooked is wrong in the extreme, and to those who do it I often think they have a stomach ache.

Coloring a bird's legs, painting it

That's what you want when you have vermin and lice in your poultrypens. Lambert's Death to Lice is the quickest safest louse killer made. Cannot harm anything except the lice. You can sprinkle it on from the can, with very little trouble. If you want to apply to woodwork it can be had in liquid form for spraying. For head lice on chicks Death to Lice Ointment never fails to do the work.

Lambert's Death to Lice

powder has been on the market for nearly 25 years and used by successful poultrymen everywhere. Guaranteed to clean out vermin in poultrypens, on stock, or bugs from vines.

Lewiston, Me. Apr. 19, 05.
Mr. D. J. Lambert, Apponaug, R. I.
Dear Sir:

There are plenty of other kinds "just as good?" but I want the "old Reliable"

Little Chicks Need A Tonic

A bowel regulator and corrective. And especially is this true of Brooder chicks. Too much feed; impure food or drink, wrong kind of feed—any of these will cause sickness and death among the little fellows.

GERMOZONE

Is the Best Cure

for Bowel Complaint, Chicken Cholera, Roup, Chicken Pox, Sore Head, etc. It is a germicide; a bowel regulator; a tonic. It not only cures but prevents disease. A tablet, or a teaspoonful in the drink, disinfects the drinking vessels, wards off disease, and keeps your fowls healthy.

R. B. Sando, poultry editor of Agricultural Epitomist of Spencer, Ind., says in a letter dated March 29, 1906: "I consider Germozone the best poultry medicine ever manufactured and practically infallible for bowel complaint and chicken cholera."

Price 50 cents, postpaid, and 1907 Egg Record free.

GEO. H. LEE CO.,

Omaha, Neb.

Lee's Lice Killer kills all vermin, both by vapor and contact, and without handling, dusting, dipping or greasing.

with iodine, etc., is pronounced wrong, and the bird is thrown out; so also is the bird that has had its earlobes touched up, but bird after bird that has blueing in, from a very slight tinge to a very pronounced color, is passed upon and prize awarded. Everybody laughs when the exhibitor leaves too much blueing in; no one finds any fault, but the practice is dead wrong and ought to be stopped, and, as I understand the standard, I would throw out every bird on which I detected blueing or any coloring. It is faking pure and simple. It is bad enough to pass on a bird that has been faked and you don't know it, but when it appears all over the body, or rather, feathers, it becomes ridiculous in the extreme. Get the dirt off, yes, but don't try to make skim milk masquerade as cream. Coloring by artificial means faking. And blueing is not the only color used in faking birds. Get on the warm side of some good buff breeder, and if he will open up and is dead onto the game of "fixing" for show, you'll get a pointer or a knowing wink, meaning, "These are things 'tis better not to dwell on." I often wonder if the R. I. Reds will come to it. I feel sure they have not yet, as there is too much, or, rather, too many, varieties of red, or else they go to different drug stores. I would like the judges to get backbone enough to cut faking by coloring out.

As T. E. Orr says, who will make history first. Most all show rules state birds must be exhibited in their natural state, except dubbing of games and game bantams, etc. When you look at a magnificent White Wyandotte or White Plymouth Rock with a good, liberal tinge of blue, I ask in all fairness, is that their natural state? Don't ask me if I do it, but all of us ask ourselves is it their natural state? Judges, read over "Faking in Glossary," and see what is what. "Artificial Coloring," "Faking"; it's as plain as can be; it's got to stop.

A judge may have his doubts as to whether a Cochins' tail has been pulled, but there is absolutely no doubt about the blue in a bird. No doubt there will be a big "holler" go up, but, gentlemen, stand up and be counted. I ask you again, is it their natural color? Let's hear from others on this subject.

I'll leave the exhibitors alone for awhile and have a go at the editors, or some of them. I notice some editors will not publish the awards of any but advertisers. Does that mean past or present? Take, for example, if you will, a breeder (I have one in mind) who has advertised almost continuously for fifteen years, and often liberally. Owing to other matters, he has been compelled to withdraw his advertisements. He gets no notice of his winnings after all these years of advertising. Another breeder, who, perhaps, has just taken a classified advertisement, for, say, three months. This latter breeder gets full notice of his winnings. It don't look to me as right or just. The chances are the former breeder will be in the game long after the latter has been forgotten.

While the above is none of my business, and I concede the right of every person to run their business as they see

fit, I cannot forget that there is an injustice done.

I hope the time will come when free reading notices will be a thing of the past. I have always been opposed to the plan, and the older I get the more I think I am right. Let each and every advertiser tell his own story and pay for the space used. I am very glad that some editors have shown "spunk" enough to cut it out. Free reading notices, often written by the breeder himself, should be discontinued. I hope all editors will get in line and cut out such stuff.

Some editors lack backbone and others have too "darned" much, if we could strike a happy medium, but I think I prefer the ones with too much. Many an editor will push a little fellow for the amount due for a little advertisement, and perhaps drop the advertisement, when the big fellow can go on, seemingly. It makes me wonder, but then "what's the use."

Editor Purvis says that after one fails in every other undertaking, they turn poultry editors. I presume that is why we have such a fine lot of fellows at the helm. While they, I presume, have their faults, they on the whole are a good lot of men, have done a lot for the cause and are capable of doing a lot more—but they must cut out a little of the inconsistencies.

Nothing would give me more pleasure than to write up the editors a "wee bit," and perhaps I will. I do not know whether they were failures in other vocations or not, but certainly those that I am acquainted with are far from failures at editing poultry papers.

The only great fault I find with many, if not all, the editors, they are humane, therefore act like the rest of us poor mortals. "If I were running such and such a paper, you can bet your sweet life that I would do so and so." How often that has been said. But would they?

The editor, or any man, woman or child, who speaks the plain truth in good, understandable English, will last longer and have more friends than the one who is always side-stepping and is so cussed diplomatic as never to say what they mean for fear of hurting some one's feelings. I have always admired Senator Tillman for the simple reason that one does not have to have a dictionary to understand him. Be honest and plain. We are all opposed to faking our birds. Let's quit faking ourselves.

It is not very often that a committee of fourteen can be pointed to revise the constitution and by-laws and have it accepted in its entirety.

Funny, too, isn't it. I have had people write me for my vote and support that I have never seen at an A. P. A. meeting, did not know they were members; but then you have often heard about the proverbial government mule.

I think it would be a good idea for the A. P. A. to give up the plan for holding an institute in connection with their summer annual meeting. That meeting should be for the sole purpose of attending to business, with no side

shows or nickel in the slot machines; simply business. The institute, in my humble opinion, would serve better to be held in connection with their winter meeting at some show. There would be more poultry men at the winter show meeting to be benefited and the politicians would not be worried so. Let every one ask for the change.

Advertising is the anchor; if you let it go you will drift on the rocks and be wrecked. Don't over advertise. It is very discouraging to be writing to would-be customers that you are all sold out. If your stock is limited, one good journal is sufficient.

"If the advertisement fails to pull blame the advertisement, not advertising."

Our Colored Covers.

We desire to call the attention of our readers to the colored covers appearing on American Poultry Journal each month. American Poultry Journal was the first poultry publication to adopt this particular style of colored covers, but since then many have tried to imitate us in this respect, but so far none have succeeded in producing the high artistic effect that we have presented to our readers. This month we present a very handsome and artistic drawing of a pair of Black Langshans, that grand old variety that has stood the test of time and has never been found wanting. It is our intention to give our readers the benefit of these colored covers each month

during the year, and feel sure that they will be appreciated in the future as they have been in the past. Next month will appear a drawing of a pair of that much discussed variety, the Single Comb Black Minorca.

The American Poultry Journal, in common with all poultrymen, sincerely hopes that Secretary T. E. Orr, who is seriously ill at home in Beaver, Pa., may have a speedy and effectual recovery.

"One of the best investments I ever made in the poultry yard was that of \$200 expended for brood coops—large, roomy and airy," said a successful breeder. Like a good foundation under a house the brood coop is a necessity. And it is the most neglected feature of the poultry yard, as a rule.

LET'S MAKE IT UNANIMOUS.

Western members of the American Poultry Association who know W. S. Russell and appreciate his worth are highly grateful that he has received the splendid endorsement in the preliminary ballot for the position of secretary-treasurer of the American Poultry Association. I have already by letter asked my friends to support Mr. Russell and I now make the request public. Mr. Russell is particularly well qualified for this important place. First, he is a man of splendid ability and is as honest as the day is long. He is posted on all phases of the work he will be called upon to do, having by reason of long years of close touch with poultry and fanciers learned the wants and needs

of all concerned. Again I ask my friends to do the American Poultry Association the best possible service by voting for W. S. Russell for secretary-treasurer.

Thos. F. Rigg.

MOTTLED ANCONAS.

Editor American Poultry Journal:

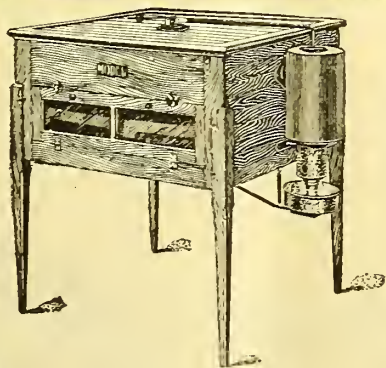

Much has been said and written on the wonderful laying qualities of the Mottled Ancona.

It has been the happy experience of all who have secured this desirable breed to find that they have "made good" all claims made for them. Occasionally objections are made to them on account of their wildness. They are naturally very active and hardy, but do not find them as difficult to keep enclosed as other breeds in the Mediterranean class. I have visited a number of poultry yards where Anconas are kept in a yard with the ordinary poultry fence. My experience does not conform with the articles in January issue of your journal regarding their flying ability.

The genuine Anconas not only lay very large white eggs, but hold the world's record for the greatest number. My Anconas have been laying so heavy during the fall and winter that I have been fearful lest there might be a decrease in eggs in the breeding season. Am pleased to say the number of eggs is increasing. They are maintaining their wonderful reputation of laying almost the year around.

POULTRY INVESTIGATIONS.

For several years it has been a strongly contested question among poultrymen whether mash fed to hens should be moist or dry. Very little experimental work has been done along this line, and the results thus far obtained

The equipment is necessarily modest because the available funds are not large. A house divided into three pens, each accommodating twenty-five hens, with suitable yards, is to be constructed. This house, together with incubators, brooders, etc., sufficient to raise enough pullets to replace those used in the ex-

mash will be fed dry. The only difference, then, between these two pens will be that pen No. 1 receives the mash moistened, while pen No. 2 receives exactly the same mash dry.

The fowls in pen No. 3 will be fed on exactly the same feed as those in the other pens, but will be fed from two self-feeding hoppers, one containing the grain and the other the mash. This mash will, of course, be dry. The hopper containing the grain will be opened about 4 p. m. in winter and 5 p. m. in summer and will be left open until the next noon. It will then be closed, and the second hopper containing the mash will be opened and left so until the first hopper is again opened later in the afternoon. In this way the hens will have feed before them at all times and can eat as much or as little as they please. A comparison can then be made with pen No. 2, the only difference between the two pens being that pen No. 2 receives its feed at stated intervals and in amounts indicated by the appetite of the fowls, while the fowls of pen No. 3 can help themselves at all times.

White Plymouth Rock fowls will be used, not because of any special preference for this variety, but for reasons of convenience. Pullets will be raised from the various pens and the test repeated twice to confirm results and note the effects of the different systems on vitality.—Press Bulletin No. 8, United States Department of Agriculture, Bureau of Animal Industry.

Scene on the Glendale Poultry and Squab Farm, Old Orchard, Mo.

are not sufficiently marked and uniform to admit of positive conclusions. Within the last year or two another problem has arisen with the introduction of the hopper feeding system on a commercial scale, and very little experimental work has been done along this line as well. As any method of feeding or management which will increase the average yield of a flock of hens, even slightly, is of great importance in affecting the profit to be derived from the industry, definite experimental data are highly important.

The Bureau of Animal Industry of the Department of Agriculture is about to begin investigations bearing on these points. Heretofore the work of the Bureau along these lines has been confined to co-operation with the Maine Experiment Station in breeding hens for egg production and with the Rhode Island Experiment Station in turkey breeding. Mr. Rob R. Slocum has now been added to the staff of the Animal Husbandry Office of the Bureau as poultry assistant, and will have charge of the new work. Unfortunately, the lack of a suitable location precludes starting an experimental establishment in the immediate vicinity of Washington, but quarters are being fitted up at the Bureau's quarantine station near Baltimore, where experiments in hog feeding have been in progress for over a year. Although the conditions there are not ideal, the work can be carried on in a fairly suitable manner. The first work to be done will be a study of the moist and dry mash systems and of the use of self-feeding hoppers.

periments, will comprise the immediate equipment.

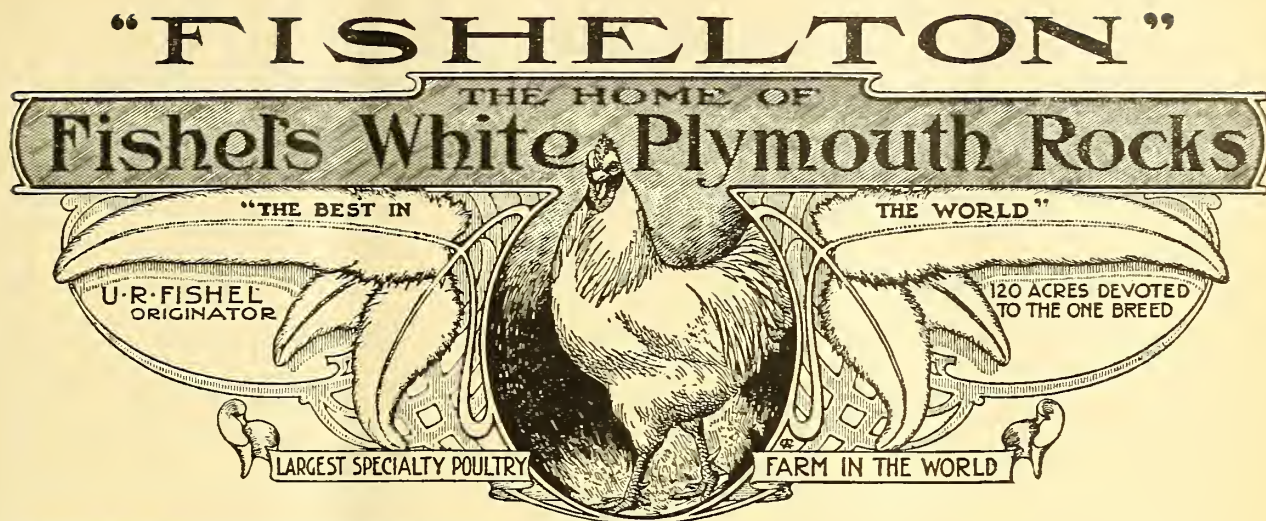

In planning the experiment it seemed feasible to combine the two problems mentioned above, as this could be done by the use of three pens of fowls. The different lots of fowls are to be housed exactly alike and all conditions made

Laying House No. 1, 14x164 feet, on the Glendale Poultry Farm, Old Orchard, Mo.

equal except the methods of feeding. The fowls in pen No. 1 will receive morning and night a mixture of whole or cracked grains scattered in the litter, and at noon a moistened mash. Those in pen No. 2 will receive morning and night the same grain mixture fed in the litter exactly as with pen No. 1, and the same mash as noon, except that this

Mrs. W. H. Hand, Whitehall, Ill., breeder of White Wyandottes, states that she has mated up six pens for this season and confidently expects to get prize winners from every one of them. All males heading these pens are pure white, of typical Wyandotte shape and of large size, one pen being headed by the first prize cockerel, another by the second prize cock at St. Louis. The other four males are just as fine, being the sons of prize winners on both sides. Send for circular.

21 PRIZES AT ST. LOUIS WORLD'S FAIR

HOPE, INDIANA, APR 1 - 1907

TO THE READERS OF THE AMERICAN:~

My Dear Friends;-

I desire to take a few moments of your time after which you can read what the other fellow has to offer you. No doubt you are pondering over the question where to place your order for eggs for hatching, may I help you decide? Mr C.I.Terhune, of Passaic, N.J.under date of Dec.21st '06writes. "I wonFIRST PRIZE COCKEREL and FOURTH PRIZE PULLET on birds hatched from the eggs I bought of you"

Another customer Mr.C.Gallimore of Mt Vernon, O. Dec 21st '06 writes,"Birds hatched from eggs bought of you won FIRST PRIZE PULLET and SECOND PRIZE COCKEREL in competetion with winners at New York"

Mr. Dod of Bristol, Tenn writes Jan.28th '07 "at our show just closed I won TWO BLUES on birds hatched from the eggs bought of youlast spring."

Mr. H.A.Beckman, of Saginaw, Mich. writes Dec.12th '06"Got 65 chicks from the eggs bought of you wonFIRST PRIZE PULLET SCORL96 also FOURTH PRIZE COCKEREL and PEN at Jackson, Mich.Show."

Mr. Ackerman of Hampton, Falls, N.H.writes Feb.11th '07 "One of my birds hatched from eggs bought of you won FIRST PRIZEat Exeter Show with Lambert Judge.

I could give you hundreds of letters like the above but what is the use the above surely convinces you where to place your order for eggs. "A WOED TO THE WISE IS SUFFICIENT"

I have something over 3000SELECTED BREEDERS and UTILITY BIRDS FOR SALE. Please do not place your order untill you write me. Send 2 DIMES for my NEW CATALOG the finest poultry catalog ever issued. After you see the Catalog if you a re not satisfied say so and your dimes will be refunded.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: Please answer in your question and answer columns: 1st. I had a fowl caught in the coop and she broke her wings. I killed her at once and when I picked her, three or four hours after, I found her absolutely lousy. I know that my fowls have no lice, but I went right in the coop and inspected them and did not find one with even signs of having lice. Can it be possible that the hen would get lousy after death? 2d. I feed my chickens with boiled oats and bran in morning, wheat in litter at dinner time, and corn at night time; also give them raw potatoes chopped up and once in a while raw meat; although they are fat they do not lay. What do you think is the matter with them? 3d. My coop is 15 feet long, 10 feet deep, 8 feet high in front and 7 feet in back. I have drilled holes

to work in during the day and a warm place to roost in at night.

Editor American Poultry Journal.

Dear Sir: Please answer the following: How much will it cost, in one year, to feed one laying hen, White Leghorn, one Barred Plymouth Rock and also Black Minorcas?

Kansas City, Mo.

D. G.

Answer.—It costs about \$1.00 per head for laying hens, any variety.

Editor American Poultry Journal.

Dear Sir: I have a few questions I would like for you to answer in the next issue of the Journal: 1st. What is the standard weight of the White Plymouth Rock chickens? 2d. Do the White Plymouth Rocks lay as well as other breeds of large fowls, such as the Barred and Buff Rocks? 3d. I have four White

Which matures the quickest of the two breeds? 5th. Are the White Orpingtons very popular? 6th. Are chickens of a solid color, like the White Orpington, easier to breed to the requirements of the Standard than the Barred Plymouth Rocks? 7th. Is there any way to keep a white fowl clean?

Rochester, Minn.

H. V. H.

Answer.—1st. We do not answer questions of this kind. 2d. White or pinkish white. 3d. Brown. 4th. This depends upon the ability of the breeder to keep his chicks growing. 5th. They are not very extensively bred. 6th. Yes, so far as color is concerned. 6th. We do not know of any.

Editor American Poultry Journal.

Dear Sir: Please answer the following: 1st. Last year I had a fine R. I. Red cockerel that got lumps on the bottom of both feet. I treated him with the usual remedies for bumble-foot, but nothing seemed to do him any good. He continued to grow worse, the lumps extending all over the top and bottom of feet. Appetite splendid all the time, but finally the toes all dropped off at the second joint and left him only stubs to walk on. He was active and spright-

Scene on the Maples Poultry Farm, Groton, N. Y., showing portable colony houses out in the field, where the chicks have unlimited free range. This is the way they raise their prize-winning S. C. White Leghorns.

on each side of same, top, of course, still I cannot get more than 14 degrees above zero any time, besides nearly all my hens' combs are frozen. Do you know any remedy for this trouble?

New Haven, Conn.

J. D.

Answer.—1st. Fowls are much like the human race, some are too lazy to keep themselves clean. This hen probably was too lazy to dust herself and all the lice made their home on her body. We do not believe there is a flock of fowls in this country that is absolutely free from lice; neither do we think that the lice hatched on this fowl after she was dead. 2d. They are probably too fat; but it is impossible for anyone to tell the exact reason why they do not lay, but your system of feeding is not at fault and will no doubt bring results as soon as the weather warms up a little. 3d. The only remedy is artificial heat and this is not good for poultry. The cold will not hurt the fowls if they have plenty of good litter

Rocks and a cock; one lays a nice egg, two lay an egg about the size of a partridge and one does not lay at all. The youngest hen is the best layer. I have six mixed chickens in the same yard and they are good egg producers and they all get the same food and care. What would you suggest for me to try on the White Plymouth Rocks?

Mt. Vernon, Ind.

H. J. S.

Answer.—Cock, 9½ pounds; cockerel, 8 pounds; hens, 7½ pounds; pullets, 6½ pounds. 2d. Yes. 3d. A hen that is not a good layer is a poor asset and should be disposed of.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following questions: 1st. Which do you consider the best, the White Wyandottes or White Orpingtons? Which are the best layers? 2d. What is the color of the beak and legs of the Orpingtons? 3d. What is the color of the shell of the eggs from the Orpingtons? 4th.

ly all of the time, having a ravenous appetite. I finally used the hatchet and buried him, disinfected the coop, and none of the others became affected with the disease. What was it? 2d. This year I had a cockerel that had something wrong with his head. He staggered around like a drunken man and was never certain of his bearings. Sometimes could not go out at the door. He held his head down lower and lower all the time. Ate hearty, was in fair condition in flesh but did not seem to have control of his movements. I used my usual remedy on him, the hatchet. Cause of disease?

G. W.

Tuscarawas, Ohio.

Answer.—1st. Tuberculosis. 2d. This was probably due to some brain disorder, and may have been caused by a blow on the head.

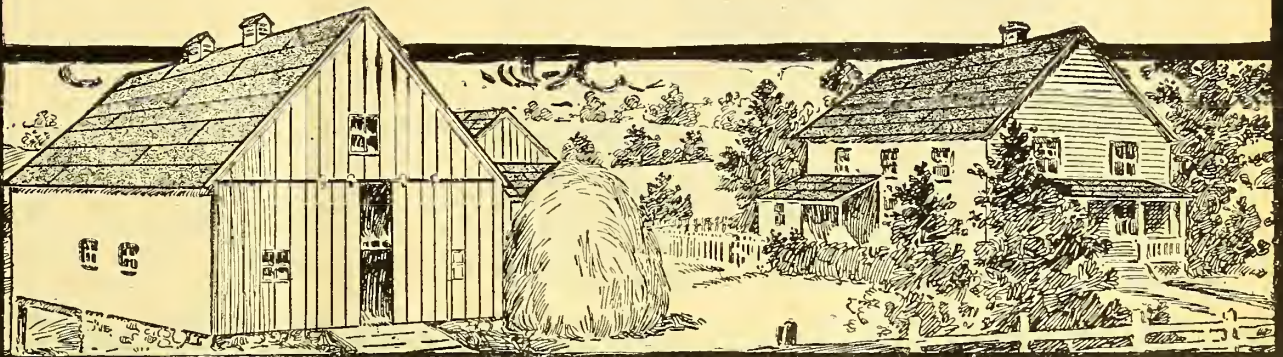

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: 1st.

Amatite Should cover every FARM BUILDING

If you are looking for a substantial and satisfactory ready roofing you will find that Amatite answers your requirements better than any other.

You will also find that it costs *considerably less* than most of its competitors. Other roofings add to their cost every year or two, because *they require constant painting*. Amatite costs nothing

to keep up. It has a *real mineral surface* on the outer side, which takes the place of the usual waterproofing coat of paint.

You do not have to examine your Amatite roofs every year for leaks, or paint them after a hard winter. Amatite will protect your buildings thoroughly and perfectly year after year, winter and summer, without any attention or bother after it is once laid.

If you have roofings now on any of your buildings that require painting every year to keep them in good repair, the cheapest thing to do is to cover them over completely with new roofs of Amatite as soon as they begin to leak. Amatite is easy to lay and costs so little that it is better economy to put it on and be free from bother, than to worry along with the kind of roof that requires constant attention.

FREE SAMPLE Let us send you at once a **SAMPLE** of **AMATITE** and a Booklet of information about it. We want you to see how much better it is than the kind that has to be painted

Kansas City, St. Louis, New Orleans, Allegheny.

Can chickens be kept in second story of a building, that is, the hog house is on the first story, and hen coop is plastered and it don't freeze in it? Will it be too damp? 2d. How many geese can one gander attend to? 3d. How can geese eggs be hatched by hens the best? Do they need to be sprinkled with water.

C. W. D.

Big Store, S. D.

Answer.—1st. We see no reason why this house should be damp if properly

a comfortable house without draught and have full range of the farm: 1st. I had a M. W. turkey gobbler; he took with something like a cold in the throat; his head or eyes were not sore, but he seemed to cough and had a rattling in his throat like it was almost filled with phlegm and would choke; apparently he was sick about three weeks, then cholera set in and he died, but in the meantime his feed would pass through him as he ate it. 2d. I had a turkey hen sick

the same as the turkeys I have described; I have lost nine turkeys and about fifty chickens, Plymouth Rocks and Black Langshans. I have been giving them the Douglas Mixture, Lee's Germozone, Clover Tonic and Wright's Poultry Medicine, but they improve very slowly. 4th. Please tell me if fish of any kind, cooked or raw, is a healthy food for chickens or turkeys. 5th. My geese died; I did not know they were sick until I found them dead. I think they must have been afflicted the same as the turkeys and chickens as the poultry has clean drinking water before them all the time. Can you tell me a remedy for my poultry? 6th. Which do you consider the healthier breed of turkeys, the White Holland or the Bronze?

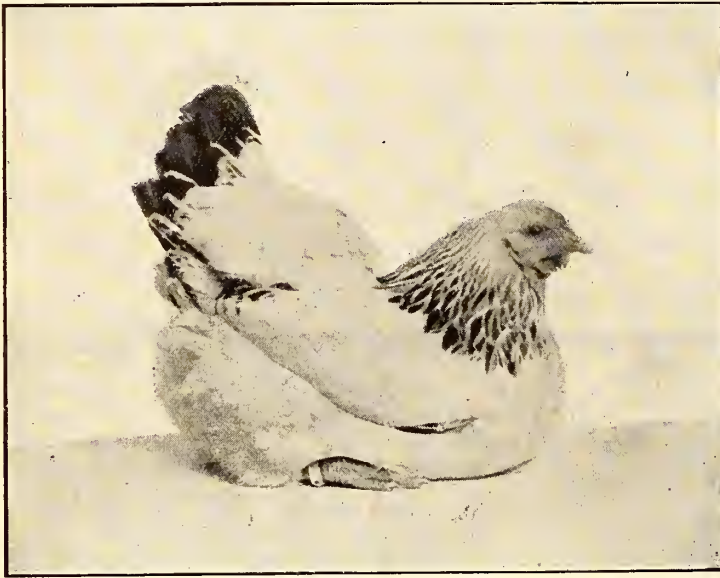

R. S.

Havana, Ill.

Answer.—1st. Your turkeys are suffering from what is known as "black head." This disease is generally in an advanced stage before it is discovered. There is no remedy for this. The only thing for you to do is to thoroughly disinfect your whole premises and try and prevent the spread of the disease in this way. Use a 10 per cent solution of carbolic acid for disinfecting. 3d. The number of different medicines you have given your chickens is enough to make sick fowls out of well ones. We believe that there is something radically wrong in your method of care and feeding your poultry; but of course we are unable to say just what it is. In your feed there is evidently a lack of green food. During the winter season fowls must be supplied with plenty of green food and grit. 4th. Fish, in small quantities, either raw or cooked, is good for poultry. 5th. Geese, as a rule, are very healthy, and are not subject to so many ills as chickens, and we believe that if you give more attention to the surroundings of your fowls you will not be troubled with disease and loss. 6th. There is no difference so far as we know.

Editor American Poultry Journal.

Dear Sir: Please tell me in your question and answer department what is the matter with my fowls and what to do for them. One of my W. P. Rock hens contracted a cold at the show in

COLUMBIA WYANDOTTE PULLET.

Pronounced by competent judges a very fine specimen of this variety. Bred and owned by Carver & Avey, Columbia City, Ind.

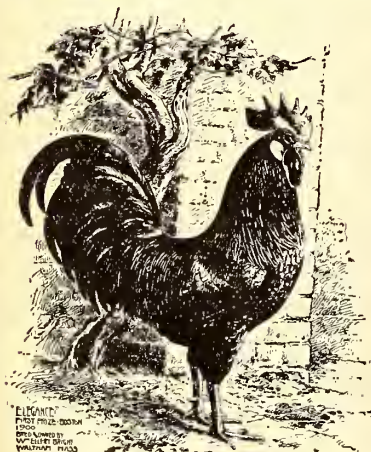

ventilated. 2d. Fifteen to twenty. 3d. It is not necessary to sprinkle the eggs during incubation.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: Can you tell me what is the trouble with my poultry? I feed whole corn, wheat and bran and shorts mash. I feed considerable of the corn parched. I parch it on the cob in the oven and feed warm. They have

this morning; when I first noticed she was sick she was very weak and seemed very sleepy; she had one passage that was green and thin streaked with a little white; I gave her some poultry medicine at first, then I gave her a dose of turpentine and lard; she lived about six hours and died; about that time her droppings were natural. 3d. My chickens are taken sick very suddenly and die shortly; their combs are red and bright even after death. They act about

A. C. Smith, Superintendent

Box 410A, Waltham, Mass.

January and while she was pretty sick it did not run into roup and she is all right except one eye is slightly swollen and at times there is some froth in the corner of it, and if I press the corner of the eye it will cause the froth to come out; other than this the hen seems well; she eats all right and sings along with the rest; there is no discharge from nostrils or no bad smell. 2d. I bought a breeding pen of W. P. Rocks the first of January and when they came I noticed a patch of small white scales that looks like dandruff on the cockerel's comb and now it has spread all over comb and there is some on his earlobes, and I noticed a small patch on the earlobe of one of my pullets. It does not get sore, but can rub it off, only it comes back. Have nine fowls in the pen and all are healthy, feed them corn, wheat, oats, besides cooked meat and apple parings. I think there ought to be something to kill this scurf on their combs, but do not know what to use.

McClellandtown, Pa. R. G. W.

Answer.—1st. This is a form of roup and the hen should not be used for breeding purposes. We have never been able to cure a hen that got in this condition, therefore cannot recommend a

remedy. 2d. This is caused by a mite called the Epidermoptes. A simple remedy is a few applications of carbolic or sulphur ointment.

Editor American Poultry Journal.

Dear Sir: Kindly state in the next issue of the Journal, if possible, the cause of clots of blood in a freshly laid egg, lain by a pullet, apparently vigorous, etc., been laying since December.

G. F. L.

Cleveland, Ohio.

Answer.—Blood clots in eggs result from a slight hemorrhage which has generally occurred in the upper two-thirds of the oviduct. In rare cases the hemorrhage may have taken place in the ovary and then the blood will be found either upon the surface of or within the yolk. Such hemorrhages are the result of great functional activity and congestion of the blood vessels of the reproductive organs and are counteracted by green feed, less animal food, and suppression of condiments. In special cases medium doses of perchloride of iron or ergot may be found useful.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the

following questions in next month's Journal: I have one chicken that drops her eggs anywhere; she stands and eats them; this is a Plymouth Rock, a very large hen, and I have one (top-not), I think that is what they call them; she eats the feathers from the other chickens' necks; she has them all eaten bare; she lays eggs every day; they are all spring chickens and are laying their first eggs. Will you please tell me what to do?

Mrs. J. D.

Detroit, Mich.

Answer.—The best thing for you to do is to cut their heads off. It is almost impossible to break a hen of either the egg or feather eating habit.

Editor American Poultry Journal.

Dear Sir: As I am a reader of your valuable paper would be grateful if you would answer these questions: In November, 1905, we purchased a White Holland gobbler and hen turkey from a poultry dealer who said they headed his pen that season. They had free range and fed with chickens; hen laid three clutches of eggs, first two not a fertile egg; in the last setting she stole her nest and hatched four spry young turkeys which ran free with her until about

7 out of 10 Prizes on Males

Including Both Firsts at Madison Square Garden, New York, '07, Were Awarded to

CRUSADER III, Universal Champion of 1907. 1st and special championship, N. Y., 1907. Bred by William Ellery Bright.

7 out of the best 10 prizes at N. Y., 1907, on males, was won by Grove Hill strain birds, including BOTH firsts. Sweepstakes for best three cockerels.

4 firsts on cockerels out of 5 at Madison Square, N. Y., during the last six years have been won by Grove Hill.

Mr. A. C. Smith.

Noblesville, Ind., Feb. 12, 1907.

Dear Sir:—I thought I would write to you and tell you about those eggs I bought of Grove Hill last spring. I received them all right and don't see how they could have been packed better. Hatched 28, raised 25—showed some of them this fall and winter at Noblesville with over 125 B. R. I won 1st and 4th ckl., 1st and 2d pullets, 1st and 3d pens. At Indianapolis, with 1 pen, 1 ckl. and 1 pullet entered, I won 1st pen and 2d ckl. in a large field. My ckl. scored 93 by Judge Pierce, so you may know he is a pretty fair one. It seems that everything out in this country is ——— stock, or it was so at the shows I was at, so it looked as though they might have done better if they had more of Grove Hill birds. I want to thank you for the quality of stock sent me.

Yours respectfully,

Orph. Cottingham.

BRIGHT'S CHAMPION MALE LINE BARRED PLYMOUTH ROCKS

THEY ALSO WON the champion and color special male, three prizes on females and two on pens.

THEY HAVE WON 80 per cent of all firsts on ckl. competed for at New York shows.

More firsts on males at N. Y. shows than all competitors combined.

Male color special for two years at America's Big 3 on pure Grove Hill strain males except one, and that largely Grove Hill blood.

50 per cent of the male championships won by the Grove Hill strain pure at America's Big 3.

66⅔ per cent of male championships won by birds of Grove Hill strain, largely or fully.

12 straight firsts at such shows as St. Louis, Pan-American, Boston, Chicago, Philadelphia and Madison Square, N. Y., is safely a record that will never be equaled.

The Best Barred Rock Eggs Ever Sold

we believe will come from these yards this year. Our yards for producing exhibition males will be headed by such winners and breeders as Crusader III, champion male N. Y., 1907; Crusader II's brother, 5th N. Y. ckl. 1905; Intruder, 4th ckl. Chicago; Intruder II, 1st pen male N. Y. 1905; Intruder III, Intruder IV, color special and 4th ckl. N. Y., 1907; Bars III, 1st N. Y. cock 1906.

Our yards for producing exhibition females will contain a score of N. Y., Chicago and St. Louis winners, besides the 1st prize pen females at these shows.

EGGS from the pens that we produce our winners and no others, \$5 per 13, \$15 per 50. Specially selected eggs to meet your needs at special prices. Get your orders in early and you will not be disappointed.

150 of the best colored and strongest breeding cockerels we ever had for sale.

four weeks old (fed them crushed dry bread, dry corn bread and sour milk cheese, millet seed and sour milk and plenty of water). Then they died one by one and when I examined them they seemed very poor and had stiff necks. (I had greased their heads and necks for lice.) The old hen died about a week later of the same disease. I put coal oil down her throat but no use. Now will you please tell me why more eggs were not fertile, and what caused the death of the young turkeys and the old hen and not affect the gobbler?

Pollock, S. D.

Mrs. A. S.

Answer.—Lack of proper feed and care caused the loss of your turkeys. The male bird being stronger was able to stand the usage better. This, also, was the cause of the eggs not being more fertile.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your question and answer column: I have a valuable S. S. Hamburg cockerel with a sore eye. The first that I noticed it I saw him scratching it and rubbing it on his side con-

SILVER WYANDOTTE MALE.

Bred and owned by E. B. Barnett & Son, Michigantown, Ind.

siderable; he keeps his eye closed and a kind of a matter comes out of it. It started with a watery fluid at first, but as it became worse the fluid turned to matter. I had a hen that way last fall and she went blind in that eye. Will you please tell me the cause and a cure for it?

A. B.

Waterloo, Wis.

Answer.—This was probably caused by a cold which settled in the eye. By bathing with warm water to which has been added a little witch hazel a cure can generally be effected, but the treatment must be kept up for a considerable time, and at least twice a day. Unless the bird is a valuable one it will be cheaper to use the hatchet.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your coming issue: My chickens, 90 in all, are to all appearances in excellent condition. Now about two weeks ago one was taken with what I would call weak legs, she would straighten them out backwards, first one then the other, while standing; about eight hours after she had no use of them at all, she lay entirely helpless on her breast or side. This lasted about 12 hours then it seemed to work off and she got complete use of them again. Now this same hen has had three dif-

Too Rapid Feathering

Spring chickens often show positive weakness as the result of too rapid feathering. This checks the development of the chick, and may result in loss. If you begin the care of the young brood by giving daily a little of

DR. HESS POULTRY PAN-A-CE-A

in the morning find these difficulties will be avoided. It contains bitter tonics to increase digestion, iron to make blood, and nitrates to help the fowl to throw off poisons from the system. By increasing digestion you increase growth and egg production, as all development depends absolutely upon the digestion. Besides this it has a principle peculiar only to itself—it has the power of destroying the little germs of disease, cleansing and purifying the system generally. Poultry Pan-a-ce-a is the prescription of Dr. Hess (M. D., D. V. S.). It makes eggs in abundance when given to laying hens, and hastens the fattening of market stock. Endorsed by leading poultry associations in United States and Canada. Costs but a penny a day for 30 hens, and is sold on a written guarantee.

KITSELMAN BROS.
Box 413 Muncie, Indiana.

ferent attacks. She does not seem at all sick, her comb is in perfect condition as regards color, and at two different times she had laid an egg in her most helpless condition. The attacks do not seem to effect her as regards laying at all for she lays right along just as though nothing had happened. Now tonight I have another afflicted in just the same manner and she is a very valuable fowl. She has won four blue ribbons this season, though I feel confident she will be better in a few hours, still the uncertainty worries me. If you're familiar with the disease please give preventive or cure.

G. S.
Olean, N. Y.

Answer.—We have had laying hens in this condition. The attacks coming on just about the time the hen was ready to lay and we came to the conclusion that the trouble was caused by the pressure of the egg on some sensitive nerve, as the fowls usually recovered after laying. We never lost any fowls from this trouble and do not consider a dangerous disease.

Editor American Poultry Journal.

Dear Sir: Please answer in next issue of American Poultry Journal: I have a hen that has a rattling in her throat; her head is swollen and her droppings are thin. Comb is bright red and otherwise looks healthy. What is the disease and remedy?

F. A. H.
Albion, Mich.

Answer.—A bad cold which is rapidly developing into roup. A simple home remedy is lard and kerosene oil. Melt

a lump of lard about the size of an egg to which add two tablespoonfuls of kerosene oil. Give a teaspoonful of this to each fowl twice a day. Also rub some of the mixture on the head and throat of the fowls, rubbing it thoroughly into

S. C. Buff Orpington pullet, second at Painesville, O., January, 1907. Bred and owned by A. A. Lee, Painesville, O.

the skin. This usually gives relief in about three days.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next Journal the following questions. As I am only a beginner in poul-

try raising and like the Barred Rocks the best: 1st. Now if I send for some of E. B. Thompson's eggs can I take those pullets and mate them to those cockerels or must I get some other strain such as Bradley Bros. or A. C. Hawkins cockerels to mate to my pullets? 2d. How is bread crumbs for baby chicks for the first seven days? 3d. Where is the best place for an incubator, in a cellar or in a room?

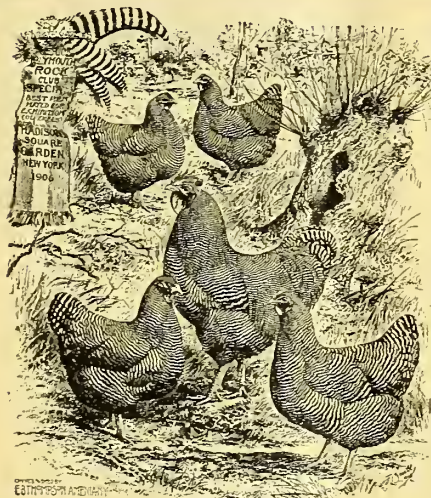

A. C. S.
Flanagan, Ill.

Answer.—1st. In ordering your eggs you can select them from two or three pens. These chicks will not be closely related and it will not be necessary for you to secure new blood the following season. 2d. Bread crumbs and hard boiled eggs is very good for little chicks for the first few days. 3d. A cellar is a good place for an incubator, but any room that is well ventilated will answer the purpose.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer in your next number of the Journal the following questions: 1st. How may I best ventilate a gabled roof hen house? 2d. A valuable Brown Leghorn hen has hard bunches the size of a white bean directly under the beak. The wattles have become hard and petrified-like. The bunches seem to have penetrated no deeper than the skin on the neck. They have appeared since last moulting. What is the trouble and treatment? Are her eggs fit for use? Would it be safe to eat her? She seems to be healthy otherwise. 3. Where may I procure a book

"Ringlets" are the Imperial Birds

Winners of Special Prize for Best Pen Mated to Produce Exhibition Cockerels, at N. Y., 1906

The three most superb Barred Plymouth Rock Exhibition Pens on either hemisphere were exhibited by E. B. Thompson at the recent New York Show, Madison Square Garden, Jan., 1906; winning 1st, 2d and 3 special prizes on pens. The Harding Challenge Silver Cup for Best Pen, and the American Ply. Rock Club's grandest special prize for best pen mated to produce Exhibition Cockerels.

MY FIRST PRIZE SILVER CUP PEN WAS STAMPED WITH THE SEAL OF "RINGLET" PERFECTION

These three "Ringlet" exhibition pens were the most striking feature of the most wonderful array of Barred Rocks the annals of time record. They represent the cream of my long and rich experience. The sun never before shone on Madison Square Garden when the great building held three such matchless exhibition pens; they were the triumph of the Fanciers' Art.

My "Ringlet" cockerel at New York winning the American Plymouth Rock Club's special prize for best shaped male is a perfect "Apollo," the ideal Barred Rock Male of the New Standard of Perfection.

THE "RINGLET" BREEDING PEN WINNING the Club's Great Special offered for the best pen mated to produce exhibition cockerels, was declared to be the very acme of skill in mating, a revelation in the science of Barred Rock cockerel breeding. My matings made up of these great winners and their blood have produced this year the great winners for the coming winter's leading shows.

The enormous prestige of the "Ringlets" created by superlative quality has made them the standard by which all other Barred Rocks are judged

"Ringlet" Eggs Are The Best That Money Can Buy

Mr. E. B. Thompson, Amenia, N. Y.

Dear Sir: I take pleasure in thanking you for the setting of "Ringlet" eggs you sent me. One of the cockerels from these eggs has won many first prizes for me, and this winter at the Lindsay Show he won first prize, scoring 94½ points. I got one pullet from your eggs that was never beaten except by one of her daughters. I showed her at Lindsay this winter, winning first prize and all specials for best female of any age. She scored 95½ points, the highest score of any hen of any breed on exhibition. She was pronounced the most perfect Barred Rock hen ever shown. I again thank you for the high quality "Ringlet" eggs you sent me. Yours very truly,

Burnt River, Ontario, Feb. 15th, 1906.

CONFIDENCE BEGETS CONFIDENCE!

Our confidence in our Chick Machinery impelled us to purchase a well equipped factory in which to manufacture the Cortland Incubator, which will hatch every hatchable egg and the Cortland Brooder which will rear every rearable chick.

We discarded the time honored, but false theories universally prevalent in Incubator construction and adopted new and proven methods which will GIVE YOU THE CHICKS.

Compare conditions as they average in the Hatching Chamber of the Cortland and under the setting hen.

	In the Cortland	Under the Setting Hen
Humidity	59	57.7
Carbon-Dioxide	20.65	24.5
Evaporation	9.7	11

Which is as close as human ingenuity has, yet, come to nature.

No. 1—150 egg size, \$20.00. No. 2—250 egg size, \$29.00. No. 3—400 egg size, \$37.00

THE CORTLAND TOP HEAT PURE AIR BROODER furnishes the chicks with plenty of heat and plenty of pure fresh air, without currents or draughts. The Heat Drum is attached beneath the Hover—NOT UNDER THE FLOOR—and warms the backs of the little fellows without roasting their legs.

DOES THE HEN CRAWL UNDER HER CHICKS TO HOVER THEM?

The entire Heating System lifts out to clean the machine. The Cortland Brooder is cheerful, wholesome and built on nature's lines—IT REARS YOUR CHICKS.

Colony Brooder	\$17.00
No. 2 Outdoor Brooder	12.00
Indoor Brooder	7.50
Heating System, complete, attachable to any house	6.00

You owe it to yourself to study the Cortland Catalogue. It describes our System, our Machines, our Factory. Read it over carefully and then send us your orders, in full confidence. You run no risk, because Cortland Chick Machinery is sold on a money back guarantee. That's the confidence we possess in what we make!

Let us assist you to succeed in the Poultry business. Your inquiries will be answered promptly and personally. Send for our catalogue TO-DAY.

CORTLAND, N. Y.

telling how to breed fowls for different purposes and giving in full the principles of the various methods of breeding employed by expert poultry men, such as line breeding, in-and-in breeding and cross breeding, etc. I want the best. 4th. Which is preferable for breeding, cockerel or cock hen or pullet? 5th. How early should the mating season begin to warrant fertile eggs?

Ames, N. Y.

W. S. M.

Answer.—1st. By making openings in each end of the building and tacking burlap or muslin over these openings. This can also be done with one or more of the windows. 2d. We are unable to say what the trouble is or give a treatment, and we never advise using a bird that exhibits any signs of disease. 3d. There is no book on the market that will give you all this information. These subjects are all treated in these columns during the year. 4th. Two-year-old hens mated with a vigorous cockerel or a two-year-old cock mated to mature pullets. 5th. March first.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following questions in your next Journal: 1st. What causes some chicks

S. C. Buff Orpington hen, first at Geneva, O., December, 1906. Owned by A. A. Lee, Painesville, O.

that are hatched in the incubator to have crooked toes and spraddle legs? 2d. How soon should chicks be removed from incubator to brooder after being hatched? 3d. Do some Black Minorca chicks have white feathers when quite young? G. E. L., Jr.

Norfield, Miss.

Answer.—1st. This is usually caused by too much heat at some period during incubation. 2d. As soon as they are thoroughly dry. 3d. Yes.

Editor American Poultry Journal.

Dear Sir: Will you please answer through your columns this question: I have a mixed lot of chickens (pullets), about 60. The roosting house is 14x14, enclosed scratching room 16x16, and outside shed 10x20. Have dust table, clean house. Have fed wheat or warm mash for breakfast, noon oats, raw potato, night corn or dry bran. They have grit, charcoal, oyster shell, milk, water, alfalfa leaves every day, green bone once a week. Seem to be hungry when fed but are in good condition when one is

killed. Have gotten one egg every other day for the last two months. Why haven't they laid more eggs? It has been cold here but not cold enough to freeze combs. M. E. H.

Helena, Mont.

Answer.—Lack of eggs is probably due to the poor quality of your stock and the age of your pullets. Late hatched pullets that are not mature when cold weather sets in very seldom lay until the following spring.

Editor American Poultry Journal.

Dear Sir: I am a reader of your paper and would like to ask a few questions: 1st. Will you please tell me what is the matter with my hens and what will cure them? They are Plymouth Rocks and are fat and their combs are red, but they have bad bowels, actions dark green and watery yellow. I have been feeding them mash mornings and corn or oats at night. They have the run of the farm. Is it contagious? I have three so afflicted. 2d. How long should hens be penned with the cock before the eggs will be fertile? Norfolk, Va. C. M. W.

Answer.—1st. This is no doubt a slight attack of liver trouble, brought about by the constant feeding of mash. Give your fowls frequent change of rations. Scatter wheat and millet seed in the scratching pens in the morning; give them plenty of green food and grit; also plenty of pure fresh water to drink. Feed very little corn and more oats and wheat. Medicine is not necessary. 2d. From seven to ten days.

Editor American Poultry Journal.

Dear Sir: Please answer this question: I set my incubator with 84 eggs; the next day set three hens on 36 eggs; all eggs from 40 hens. I have three pens, 20 hens in one pen; 2 other pens, 10 each; two males with the 20; one each in the other pens. My runs 50x100 each. I left all eggs in till the eighth

teenth day, tested out 52 infertile eggs from the incubator; two from the hens, one each only. My incubator is regulated with mercury thermometer, electrically connected, at 103. Where does it come in to test 52 out, and only one each from the hens. Eggs collected

than to put in the egg tray with heat up to 103? I. L. H.

Bartow, Fla.

Answer.—1st. We cannot say, but it is certain the incubator had nothing to do with the fertility of the eggs. 2d. For best results the thermometer should

A trio of White Plymouth Rocks. Bred and owned by J. B. Howe, Kentland, Ind.

20 to 24 a day till incubator and hens' nests filled. 2. Would it not be better to have the incubator all tested, knowing it to be right, stop the heat and let it cool off, then put in the eggs, light the lamp, raise the heat, taking, say, five to seven hours to get up the heat,

not be above 70 when the eggs are put in the machine, and heat gradually increased until it is up to 102½ or 103.

Editor American Poultry Journal.

Dear Sir: Please answer in the next issue of the Journal and oblige a sub-

WORLD'S RECORD

FOR EIGHTEEN YEARS

WIN

Bradley Brothers' BARRED PLYMOUTH ROCKS.

At MADISON SQUARE GARDEN, NEW YORK, the last 18 Years

"WORLD'S CHAMPION OF 1906." First Prize and Sweepstakes Cockerel at New York Show, 1906, nearly 500 Barred Plymouth Rocks competing.

Forty-eight Winning Males at New York Shows have been bred by us the last Eighteen years.

We have Bred and Raised More High Grade Exhibition B. P. Rocks the past eighteen years probably than any other breeder in the world.

The last Eight Years Thirty-nine birds bred by us have sold for \$100 or more each, or that price refused.

**BIRDS WE
BRED AND
RAISED
HAVE WON**

**33 1/3% More First Prizes, total,
25% More First Prizes on Pens
50% More First Prizes on Ckls.
66 2/3% More First Prizes on Males**

than any other exhibitor has won on any stock.
than any other exhibitor has won on any stock.
than any other exhibitor has won on any stock.
than any other exhibitor has won on males not our breeding.

**OUR
LEE BELLE
BLOOD**

Won First Prize in Each of the Two Largest Shows of the Season, and Again Demonstrated its Superiority. It also Won the Championship Prize in the Strongest Female Competition of the Year.

Yours of 16th at band and in reply would say, from your eggs I got 1st, 2d, 3d cockerel, scoring 93, 92½, 92; 1st pullet, 95½; 1st pen, cockerel 91, pullets 95, 94½, 94½, 94 by Judge May. Mr. May said that the 1st pullet was one of the best colored birds he ever handled. I thank you for your fair treatment and believe you gave me the best you had, as you advertised. If this is of any use to you, you are at liberty to use it in any way you want. 1907

Geo. Booth, 10 Murry St., Barre, Vt.

Stock For Sale - New York Winners and Birds Bred From Winners. Our Breeders For Sale after May 20th. Large Illustrated Circular and Particulars of \$1,000.00 Chick Hatched from Our Eggs, Free.

(From Poultry Yards of W. K. Vanderbilt, Jr.)
Bradley Bros.,

Gentlemen:—I want to tell you how well pleased we are with the stock from eggs you sent us last spring. From the 20 eggs I raised seven cockerels and seven pullets, and every one of them is a good bird. Three of the cockerels are extra good; I have been offered \$25 for one of them.

We bought 16 settings of eggs from four of the largest Barred Rock breeders, but didn't get one bird out of the whole lot as good as several we have from your eggs. Very truly yours,
1907 A. E. Wright, Mgr. Deepdale Poultry Farm, Gt. Neck, L.I. N.Y.

A COMPLETE CHICK FOOD

**Produces Flesh, Feathers, Bone and Muscle;
Aids in Preventing Indigestion and Diarrhoea**

CYPHERS CHICK FOOD IS COMPLETE

It is composed of Six Kinds of Wholesome High-Grade Grains—Free from Weed Seeds and Screenings. It is prepared with a view to promoting the greatest healthful growth in the shortest period. A pound lost in a young chick's growth can never be regained—once lost, always absent—and your chance for winners or early layers has gone.

**The Best Foods Produce the Best Fowls
For Show—For Market—For Laying**

CYPHERS COMPANY'S FOODS ARE THE BEST

For the following reasons:

1. THE members of the Company are leaders in the poultry business—experienced exhibitors and market poultrymen who know the needs of poultry. See page 7 of our new catalogue.
2. OUR mill is devoted exclusively to the mixing and grinding of poultry foods—no breakfast foods, no stock foods, no waste products. We operate the largest exclusive poultry food mill in the world—all for poultry.
3. OUR foods are scientifically mixed and balanced by automatic machinery that cannot go wrong once the proportions are adjusted—and we readjust them for every different ration.
4. EVERY Sack of Food is Sealed. Whether you buy direct or through one of our agents see that the Seal on the bag is unbroken. Our foods are too valuable to take chances of adulteration.
5. WE make a special food for every purpose: Chick Food for Chicks; Laying Food for Layers, etc., etc., every one balanced to meet requirements whether for forcing birds for market or for show, for laying, or for growth.
6. CYPHERS Incubator Company's guaranteed analysis is on every bag. Cyphers Incubator Company stands behind it, and the individual members of Cyphers Incubator Company recommend its use for best results. The leading fanciers recommend it as will be seen by reference to our 260 page Free Catalogue.

Write For Free Illustrated Catalogue of 260 pages, entitled "How to Make Money With Poultry and Incubators." It's a big one. We pay postage. It contains six of the most valuable chapters ever published on Poultry. **Chap. I.**—Magnitude of the Poultry and Egg Industry; **Chap. II.**—Review of our Great Poultry Markets; **Chap. III.**—Profit Making Broilers, Roasters and Capons; **Chap. IV.**—The Profitable Pekin Market Duck; **Chap. V.**—Successful Chick Rearing; **Chap. VI.**—Profitable Egg Farming. Also photographs of Successful Poultry Plants, both Fancy and Commercial; Photographs of Government Experiment Station Experts; America's Foremost Exhibitors, Owners and Managers; their Poultry and Duck Houses, Incubator Cellars and Brooding Houses; Our Complete line of Incubators, Brooders, Poultry Houses and Supplies. If in return for this book you will send us the names and addresses of two acquaintances who keep poultry we shall consider it a favor.

oats and corn and they have plenty of grit before them all the while. If you can, tell me what is the matter with her and cure. 2d. Please give me a cure for egg eating hens. F. L.

Pontiac, Mich.

Answer.—1st. This fowl has probably received a blow on the head, which has brought on her trouble. A bird in this condition should be killed. 2d. The egg-eating habit is usually contracted during the winter when fowls are closely confined and it is almost impossible to break them of it. A plan that we used with fairly good success was to procure a number of china nest eggs and scatter them about the pens. The hens would pick at these until they got tired and would come to the conclusion that egg shells were somewhat harder than usual.

Editor American Poultry Journal.

Dear Sir: Will you answer a few questions in your April issue and oblige: 1st. Why do hens lay soft shelled eggs when they have unlimited range? What should I do to prevent it? 2d. Is boiled or fried meat good for hens and in what quantities should it be fed? 3d. How and in what quantities would you advise feeding alfalfa hay? 4th. When do lice and mites make their first appearance in the spring? L. A. F.

Joplin, Mo.

Answer.—This is due to either a lack of shell forming material or a diseased condition of the egg passage. Give the fowls plenty of shell-forming material such as wheat bran, cut or calcined bone, broken mortar, crushed oyster shells, etc. Give plenty of green food. 2d. Boiled meat is very good; about two ounces to each fowl three times a week. 3d. Alfalfa hay should be steamed over night and fed as a mash in the morning. This may be mixed with bran and chop-stuff. 4th. Lice and mites do not wait till spring to put in their appearance; they are present at all seasons of the year, and are the cause of more sickness in the poultry yard than everything else put together.

Editor American Poultry Journal.

Dear Sir: Will you please reply to the following questions through your question and answer column: I killed one of my Black Minorca hens the other day and while dressing it I found that its liver was about the size of my hand. Can you tell me if that is a disease and if so what it is called? Can you tell me what is the cause of it? I have been feeding them a bean mash for morning and for the other two meals corn, barley, oats, wheat and crushed bone. I have been warming their feed just enough so that I could keep my hand in it without feeling uncomfortable. J. W., Jr.

Answer.—This is a diseased condition of the liver and usually caused by improper feeding and lack of green food. A fowl in this condition is not fit for market. Give your fowls frequent change of rations and stop feeding bean mash as that is not a suitable feed for chickens.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following question in your next issue? I have some Toulouse geese which are something new to me and would like some information: 1st. When are they supposed to begin to lay? 2d. How many eggs are they supposed to lay and in how long a time? 3d. When they

What Two Lice Can Do

They can virtually go right down in the poultry keeper's pocket and take the money. If left undisturbed the natural increase is so great

that they soon multiply to a swarm that will sap the life of young chicks, breed disease in the pens and ruin profit.

Instant Louse Killer

(Powder or Liquid)

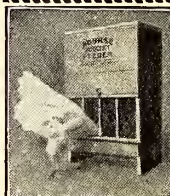

Kills lice on poultry, lice on stock, and ticks on sheep. It is harmless to use, and will effectively destroy cabbage worms, slugs on rose bushes, and bugs on cucumber, squash and melon vines. Instant Louse Killer is the original powder louse killer put up in round cans with perforated top. Look for the word "Instant" on the can—then you won't get an imitation.

are ready to set what kind of nest should I prepare for them? 4th. Should they have warm or cool place to set? 5th. How long do they take to hatch? 6th. How many eggs to a setting? 7th. At what time of the year are they supposed to be plucked, and how is it done?

Ware, Mass. J. B.

Answer.—1st. They should start to lay about the middle of March. 2d. From 20 to 40 eggs. 3d. They prepare their own nest, by plucking feathers from their breast. 4th. They will do better if you will allow them to select their own nesting place and will keep their eggs warm by covering them with feathers when they are off the nest. 5th. Four weeks. 6th. If the goose is large she will easily cover 15. 7th. Geese can be plucked twice a year if you so desire; spring and early fall. This is done by simply pulling the feathers out of the live goose. We have not the room here to go into details.

Editor American Poultry Journal.

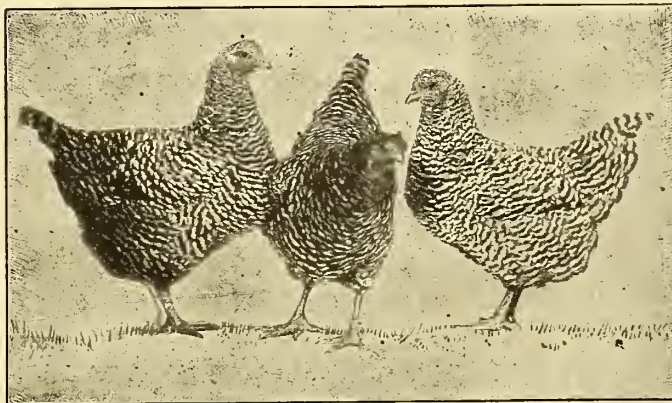

Dear Sir: Being a subscriber to your paper I would like to ask a few questions which I would be pleased to see in your department of questions and answers: I have a flock of about 30 fowls. One of them will lay five days, perhaps, and then not lay for several weeks. Sometimes one will only lay one egg and then stop. I feed wheat and oats in litter in morning, table scraps at noon and ground bone three times per week. At night if it is very cold I feed corn that has been heated. If not very cold I feed equal parts of wheat and oats. Dry mash, grit and shells and pure water are before them all the time. 1st. Is there anything the matter with my hens? They are very healthy and have bright red combs. 2d. I have a cockerel whose tail is just crooked enough to be noticed. If I use him to breed from will it have any effect on the chicks? 3d. What is ticking in the

plumage of White Wyandottes and does it ever occur in White Orpingtons? 4th. Do you think that the White Orpingtons lay as well as White Leghorns? As well as Black Orpingtons? 5th. For one season would it be advisable to mate a cockerel with his mother? H. C.

Pittsfield, Mass.

Answer.—We do not believe there is anything the matter with your fowls and as soon as the weather warms up a little they will probably shell out the eggs all right. 2d. Would not advo-

a year past, and would like to have you answer the following questions in your next issue of the Journal: (1) I am contemplating the erection of a chicken house for a number of flocks of chickens, and I wish that you would tell me whether it would be better to build the several partitions (between the different flocks) out of poultry netting or lumber? (2) In erecting a chicken house, would you advise having one or two rooms to each apartment, I have been thinking that if I could get just

Three 200-Eggers. Note the shape which means room for eggs. Bred and owned by J. W. Parks, Altoona, Pa.

cate the use of this bird as a breeder. 3d. Ticking is black fleck or specks in a white plumage and is liable to appear on any white fowl. 4th. The White Leghorn will probably lay more eggs, but the eggs are usually much smaller. 5th. Yes, if you desired to transmit some exceptionally good qualities.

Editor American Poultry Journal.

as good results from one-room apartments that I would prefer this plan rather than to have two rooms. (3) Please state whether or not you would advise feeding chickens ashes from the stove, and if so, please state whether both coal or wood ashes, or both are good for them. (4) Would you consider ashes the proper thing to put in the dust box for chickens, and if so what kind, wood or coal ashes? (5) Are ashes good for grit for chickens, or

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Eggs for hatching from my regular matings, \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100. From exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

THE NEW \$5.00 CHAMPION BROODER

Thousands of chicks are lost through improper brooding. We will show you how to raise **all** you hatch! show you how to **stop** the big **death rate** among your chicks, show you how to raise chicks without **leg weakness, bowel disease or drooping wings** and show you how to raise them **at all times** of the year **out-doors** without the use of expensive brooder houses. We can prove to you how others have done all this and more. Here's how the Champion works:

Villa Ridge, Ill. "Champion Brooder is in use and I must say it is a dandy. I never saw anything so complete. I have 15 different makes but yours is the only one my foreman enjoys taking care of."—K. H. Winters, Nashville, Tenn., "I have 2 of your Brooders that I used last year and I did not lose a chick."—F. A. Jones, Fishkill Landing, N. Y., "We think your Brooders are A1, easy to handle and perfectly safe. We have **not lost a chick** through the Brooders, and we have 19 of them, and we expect to use twice as many this season."—Haight & Knight, Seymour, Conn., "The Brooder I bought of you three years ago has been out doors all winter with chicks in it that were hatched late in the fall. The weather has been 10 degrees below zero and I never lost a chick." J. C. Holden.

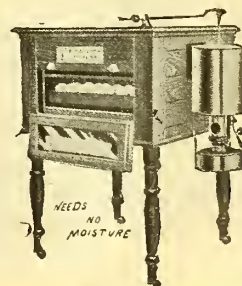

1907 Model Combined Brooder and Coop

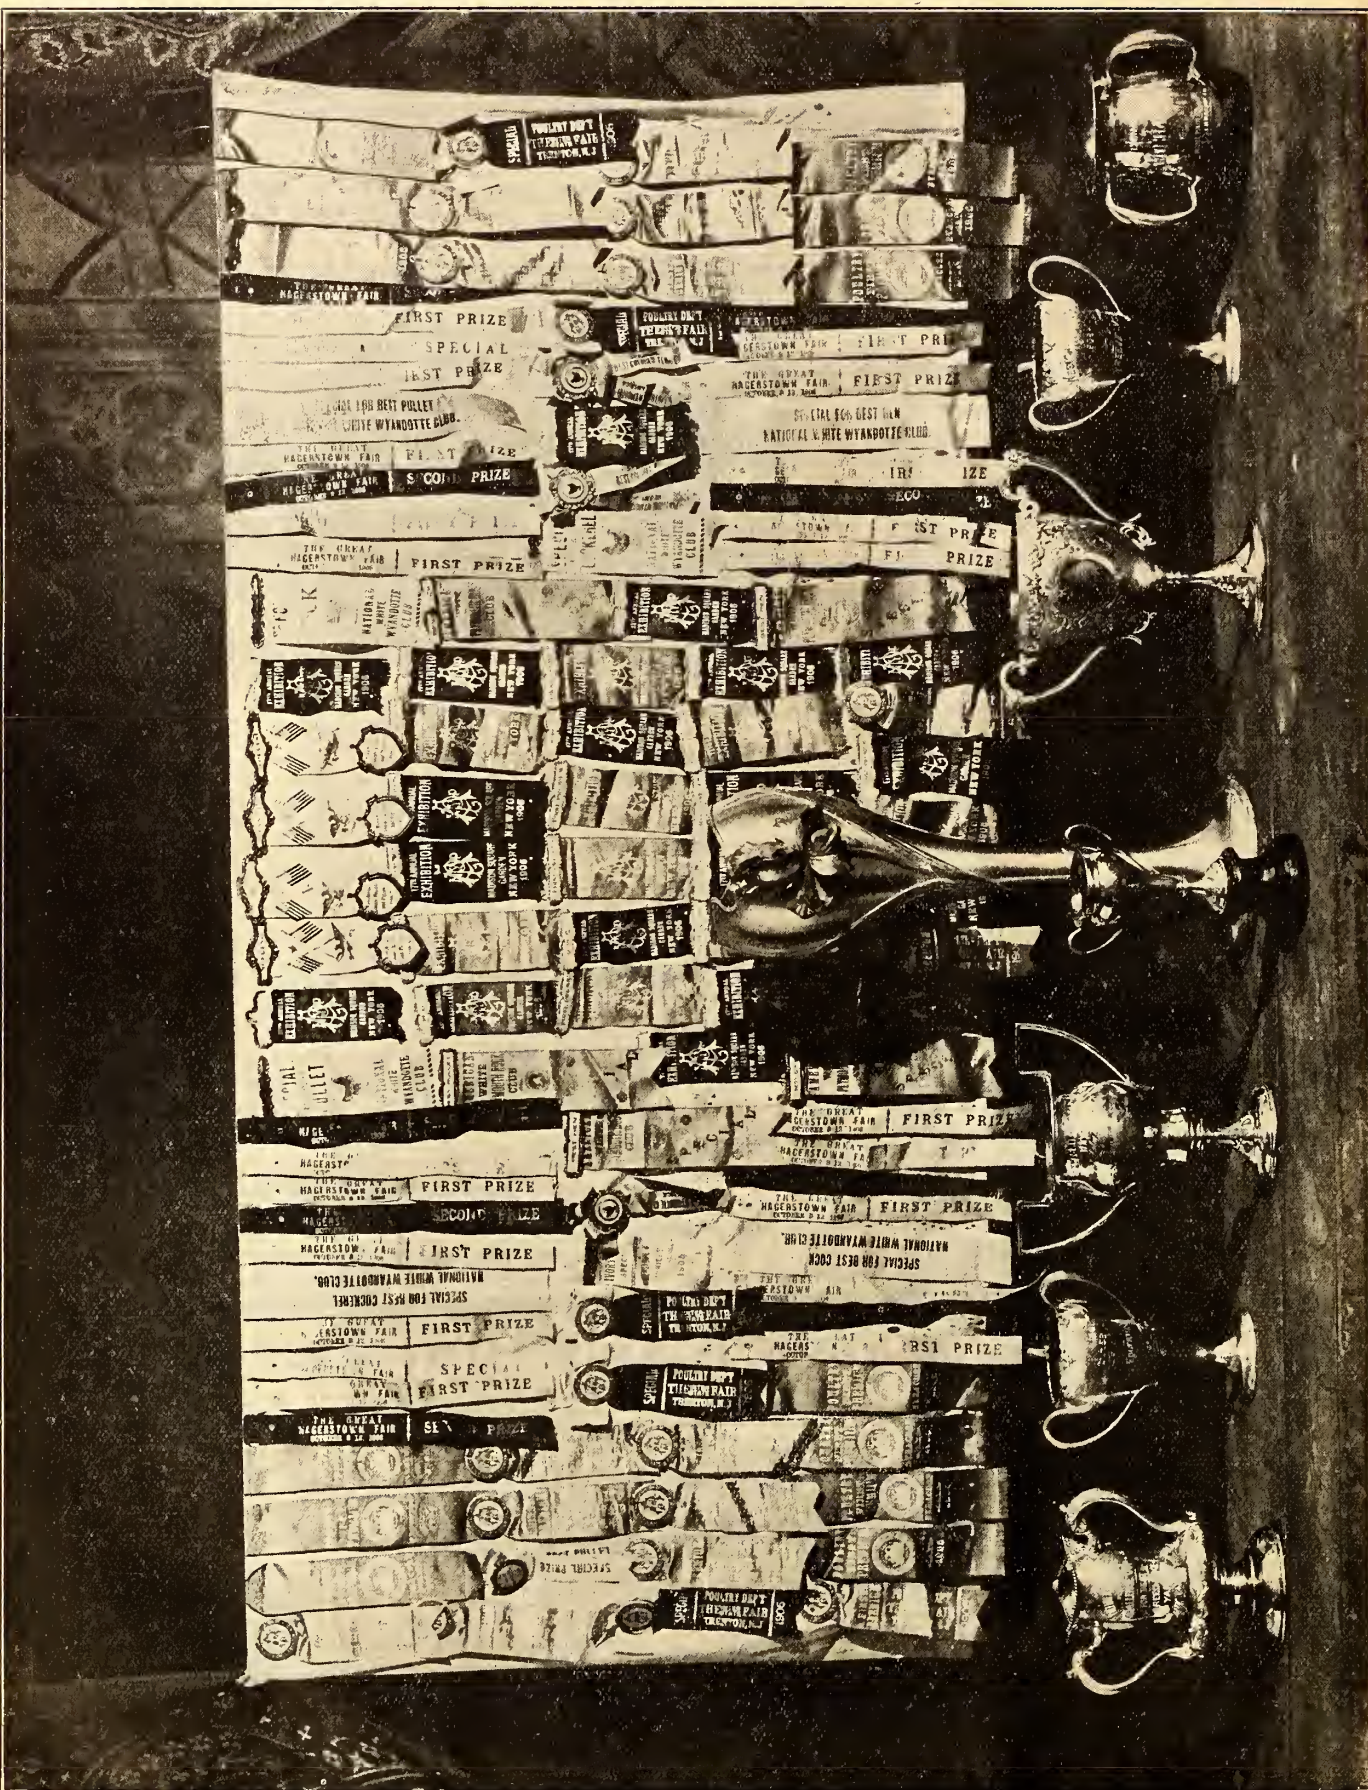

Our new 1907 model Champion can be turned into a **weaning coop** in one minute. Just lift out the heater and you have a first-class **coop** for the chicks after they are old enough to do without heat. **Coop** is large enough for 50 chicks until 10 to 12 weeks old. This is a great feature and saves you the expense of an extra **coop**. Our improved **safety pneumatic lamp** is now used in them; it cannot **explode** or **catch fire**. Needs no **water pans** or **water jackets**. Best and simplest lamp ever used in a brooder. We spare no expense to make the **Champion the best in the world**. Don't pay \$12 for a brooder which the Champion can knock clear out of sight. Don't waste your time raising weaklings—use the Champion and raise **big chickens**. The ones that weigh **2½ lbs. at 10 weeks**. The **big** kind, the kind you want, the kind your customers want and the kind the **money** is in. The Champion is a big Brooder, holds 75 to 100 chicks, is made in a big factory and sold for little money; \$5.

THE CHAMPION INCUBATOR

The Champion Incubator is a non-moisture hatcher, strictly up-to-date, automatic in regulation. Has new removable nursery chick tray. 120-egg size, price \$15. Warranted the simplest and easiest to care for. Our free "Book of the Champions" tells the rest. Send for it.

OSSINING, N. Y.

does other grit have to be provided for chickens where ashes are supplied?

Villard, Minn.

C. F. A.

Answer.—(1) To avoid draughts and prevent the male birds from fighting we would advise the use of board partitions. (2) Just as good results can be obtained from the one-room plan. (3) Ashes are absolutely of no value as a chicken feed. (4) Road dust and coal ashes are all right for the dust box; but wood ashes are injurious, as they contain too much lye. (5) Ashes are of no use as grit.

Editor American Poultry Journal.

Dear Sir: Wish you would answer the following questions in your next issue: 1st. How can you keep eggs from fancy stock sold at market prices from being fertile? 2d. How long after male is separated from hens will eggs be fertile?

E. W.

Alton, Ill.

Answer.—1st. By not allowing any male bird with the females. 2d. From one to six weeks.

Editor American Poultry Journal.

Dear Sir: As you have a Question and Answer Column in your paper, I would like to ask a few questions: (1) What class of poultry do the Faveroles belong to, and what is their color? (2) What are the Buckeye Reds, and what class do they belong to?

Milwaukee, Wis.

J. A. P.

Answer.—(1) French. Salmon color. (2) Buckeye Reds are similar to R. I. Reds, only a more pronounced red. They are an American breed, having been originated by Mrs. Frank Metcalf, Warren, Ohio. The American Standard of

Perfection will give you full information about Buckeye Reds.

Editor American Poultry Journal.

Dear Sir: As I am a reader of your valuable paper I would like to ask some questions: (1) If to White Plymouth females I put a White Orpington male would the pullets sired from these birds be good layers? (2) What kind of disease is the following: I found on a White Orpington pullet a ball about half an inch in the left side of her neck, outside, and another in the right side, but into the throat, the size of a dime. These balls are hard and of the same color as the throat.

E. C.

Muxcami, Yucatan, Mexico.

Answer.—(1) We are unable to say. (2) This is probably due to a cold which settled in the throat.

Editor American Poultry Journal.

Dear Sir: Would like to ask a few questions through your Journal, of which I am a subscriber, being only a beginner in a small way. I took off a hatch four weeks ago, raised them in a brooder and they have done fine and grew very fast until the last day or so. They seem weak in their legs, and some of their feet the toes just bend back and do not straighten out and they can scarcely walk; they look droopy and feathers do not lay well. Is this caused by brooder in any way or feed? What is best feed for little chicks? Are what the butcher calls cracklins good for laying hens?

H. H. C.

Shawnee, Okla.

Answer.—Leg weakness in little chicks is usually caused by improper distribution of heat in the brooder, or

where there is too much heat on the floor of the brooder. The floor of the brooder should be covered to the depth of two or three inches with cut clover hay and the feed scattered in this litter. Where the chicks are kept busy scratching for their feed there is very seldom any leg weakness. Medicine is of no avail for little chicks in this condition. Cracklins, in small quantities, is good for laying hens.

Editor American Poultry Journal.

Dear Sir: I enclose a list of questions which I would like to see answered in the April number of the American Poultry Journal.

First—What is the amount of house room required for 50 hens? Second—Amount of scratching shed room for same number? Third—Amount of yard room for same? Fourth—At what age will pullets generally begin to lay? Barred Rocks being meant in this case. Fifth—What is a good or the best feed for young pullets which you intend to use for winter layers? Sixth—Will Barred Rock pullets hatched the middle of May mature early enough for winter layers? Seventh—What is the proper amount of beef scraps to feed per hen? Eighth—The proper amount for young chicks? Ninth—What is the best way to feed short cut alfalfa? Tenth—Are pork cracklings as good as beef scraps for hens? Eleventh—What is the proper age at which to caponize young cockerels? Twelve—Does Chicago furnish a steady market for capons?

D. L. T.

Hartford, Mich.

Answer: First—Five hundred square feet. Second—The same amount or more if space will permit. Third—There is

WHITE WYANDOTTES

GREATEST STRAIN ON EARTH

There are some important factors to consider before placing your order for eggs or stock. 1st: Look well to the reliability and honesty of the breeder. 2d: Remember we have the whitest and best shaped White Wyandottes in America. Our Chicago show record bears us up in this statement, our winning of four firsts at Chicago show was never equaled. Also our unparalleled achievement of every 1st prize at 3 great state fairs.

We have furnished winners for some of the world's greatest shows. Many successful breeders of today owe their success by foundation stock from our strain.

Stock for sale in any quantity at reasonable prices, considering quality.

Our breeding pens this season are simply grandness, beyond words to describe. Eggs \$5 per 15, \$8 per 30, \$10 per 45, \$20 per 100. Should be pleased to mail you our egg circular free. Large illustrated catalog 10c; it is worth dollars to beginners.

CLEMENT & FIKE

Box A
H. H. Fike, Gen. Mgr.

LIBERTYVILLE, ILL.

no limit to this; but it should be at least 50x125 feet. Fourth—From four to eight months, all depending on the care and feed given them. Fifth—Wheat and oats should be the principal feed. They can also be fed corn, barley, buckwheat, green food, beef scraps, etc. Sixth—Yes. Seventh—Two ounces three times per week. Eighth—Our method is to keep it before them at all times and allow them to eat what they desire. Ninth—By steaming it over night, when it can be fed in that condition or mixed in the mash. Tenth—No. Eleventh—Three to four months. Twelfth—No.

Editor American Poultry Journal.

Dear Sir: Will you please tell me in your next issue: I had a fine large Plymouth Rock hen. She would sing around all day as if nothing troubled her; her head was blood red and had all indications of perfect health except she became daubed around the vent. I tried every means of cure to no avail, so I killed her and found her about the fattest hen I ever saw. The eggs, of which the largest was about the size of a common marble, was of various colors, from yellow white to black and filled with matterly substance. What was the matter with this hen? J. N. I.

Baker, Wis.

Answer: An over-fat condition. Old hens are more subject to this than pullets. Dieting is the only remedy.

Editor American Poultry Journal.

Dear Sir: Please answer enclosed questions in April Poultry Journal: First—Is it all right to mate line bred Barred Plymouth Rock cockerels with hens that are not line bred? Second—

Is a good light colored Barred Plymouth Rock pullet from a cockerel mating all right for a pullet pen the following year? Third—Do the best Barred Plymouth Rock breeders mark all their chickens so they know which pen they come from and select their next year pens accordingly, or do they choose them by color regardless of which pen they come from? Fourth—Is their any rule for pricing Barred Plymouth Rocks and Rhode Island Reds according to their score? If so please give general prices of each. Sixth—Is there any way to put a ventilator in the roof of an old chicken house that will not cause a draft? E. F. M.

Viola, Ill.

Answer: First—Yes, if you understand what points you are breeding for. Second—This all depends on the quality of the females. Third—The best breeders keep a careful record of their matings and mark the chicks, and in mating they are governed by this record and by the appearance of the individual specimens. Fourth—No, except that a high scoring bird is worth more than one with a low score. Sixth—Yes, various ways. One of the best is this: After making your ventilator tuck burlap over the openings. This will allow the foul air to escape without causing any direct draft upon the birds.

Editor American Poultry Journal.

Dear Sir: In February 7 number of your Journal in the question column I saw this question: Will ducks hatched in May lay during the next winter? Answer: No, not until the spring. To show you that rule is not to be relied upon, I have a drake and three ducks

hatched June 17, 1906; first egg dropped January 2, 1907. In about ten days the three ducks were laying and have continued with from two to three eggs each day to date. I have three small hatches of ducks brought out by hens within the last four weeks. I don't know what breed they are, or if they have any ancestry to be proud of. I know they are cokers to lay.

Charlie M. Nicholls.

McKeesport, Pa.

Editor American Poultry Journal.

Dear Sir: Will you please tell me how fresh beef scrap is prepared or how to prepare fresh cut bone so it will keep like that you buy, as I can buy it cheaper, fresh, in large quantities? Second—Is it true that S. C. Buff Leghorns drop their eggs anywhere when running at large, and is it the same with R. C. Buff Leghorns. Third—Will you please tell me how to prevent hens laying soft-shelled eggs? They are running at large, are quite fat, hopper fed, with mash once a day, what they will eat quickly.

Warren, O.

J. F. K.

Answer: First—We are not familiar with the process of manufacturing beef scraps. Second—We have never found it so. Third—Read answer to this same question elsewhere in this issue.

Dear Sir: Please answer in your next number: What makes little chickens die when about a week old? I gave mine sand to pick at and dry bread crumbs when about two days old. In a day or so more gave them bran, rolled oats and cornmeal mixed up for them in dry form. Sand where they could pick at generally. I understand it is bowel trouble. Have

Miller's White P. Rocks

have won this season twelve firsts, eight seconds, five thirds, one fourth and one fifth prize, besides four silver cups at three leading shows.

Wm. Miller ... Fairlawn Poultry Yards
BOX ONE, CRESCENT, ST. LOUIS COUNTY, MISSOURI

SQUARE DEAL POULTRY FENCE

1½-INCH SPACING AT BOTTOM.

Like all poultrymen you have experienced the need of something better than old fashioned netting for fencing poultry pens. We offer you the best--It is stronger, lasts longer, is closer spaced, and costs less.

Stronger. It is made with top strand of No. 11 wire, bottom strand of No. 12, and intermediate strands and stays of No. 14 wire. The lightest wire used is just four times as strong as that used in netting.

Lasts longer. Square Deal Poultry Fence is made of highest grade heavily galvanized wire. This, in connection with the much heavier wire used, makes it withstand the elements four or five times as long as poultry netting. It is not injured by stock or other excessive strains.

Closer spaced. 1½ inch for first four spaces at bottom, then gradually increasing to 4 inches at the top. We give close spacing at the BOTTOM where you need it. The stays are only 6 inches apart.

Costs less than netting. You save half the posts and need no top railing or bottom board. The post is worth 15c. and the railing and board saved on each rod is worth at least 35c., which makes it 50c. saved on each rod. That's more than enough to pay for a rod of Square Deal Poultry Fence. In other words, you spend more money for the framework than would be necessary to complete the job with our long lived, close spaced poultry fence.

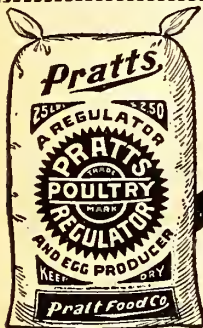

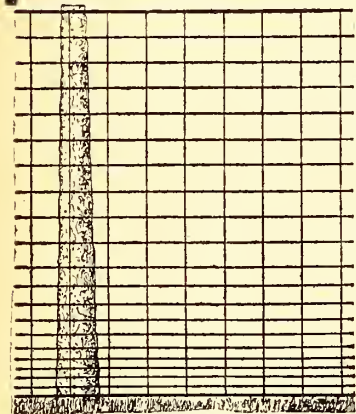

The up-to-date Fence. Our Square Deal Poultry Fence is the Up-to-date fence for poultry yards, and it is rapidly supplanting netting because it saves the users money--saves money in first cost then multiplies the saving by about 4, as it lasts fully that much longer.

Poultry netting is an obsolete, out-of-date, expensive method of fencing poultry pens. It's flimsy stuff at best. If you consider 40 to 70 per cent of your fence money worth saving, then write us today for our catalogue and prices.

KEYSTONE FENCE CO.

500 RUSH ST. PEORIA, ILL.

NOT IN THE TRUST.

How to Make Poultry

Pay

- 1st: Raise the little chicks
- 2d: Develop them quickly
- 3d: Increase the egg production
- 4th: Prevent lice and disease

That is what you are after; and to secure such results it is necessary that your stock be kept in a perfectly healthy condition. Stock is now forced to the limit and the hens must have something more than the ordinary feed to make up for the added strain, and to regulate their blood, bowels and digestive organs, so that all the food given is properly assimilated and turned into eggs, flesh and strength. To acquire this, give daily

Pratt's

Poultry Regulator

(For 35 years called Pratt's Poultry Food) mixed with the regular feed. This is a regulator, appetizer and digestive tonic, and wherever it is used you receive good results or you get your money back. It has been used by successful poultrymen for nearly 40 years. Order it to-day. Packages 25c., 50c. Sacks \$1.25, \$2.50. 100 lbs. \$9.00.

Pratt's Lice Killer

(Powdered Form)

Your hens can't fight lice and lay at the same time. Use Pratt's Lice Killer and your profits will increase. Packages 10c., 25c., 50c.

Pratt's Head Lice Ointment

One box will save the lives of hundreds of little chicks. It's a guaranteed cure. Price 25c. and 50c. a box.

Send to-day for "Rhyme and Reason." It's free.

PRATT FOOD CO., Phila., Pa.

Whenever you see a horse, cow or hog, think of Pratt's Food--an animal regulator.

Pratt's Animal and Poultry Regulators and Remedies are guaranteed under the Food and Drugs Act, June 30, 1906 Serial No. 448

had them out of cold and dampness entirely. Give water when they eat about four times. What am I doing that's wrong? Does the Douglas mixture tend to loosen bowels? W. R.

Forrest, Ill.

Answer.—Your system of feeding is wrong. Bran and rolled oats are both loosening and there is no nutritive qualities to bran. You should procure some chick grit. Sand is not much use as grit. Hard-boiled eggs and bread crumbs make a good feed for the first few days. We find that the prepared chick feeds that are now on the market is the best feed for young chicks. Douglas mixture is a tonic, but should not be given to little chicks.

Editor American Poultry Journal.

Dear Sir: First—Will you tell me in your next paper what will stop egg eating? I feed beef scraps and some green cut bone, but they eat their eggs. Second—I have one old turkey hen and an old tom and three young hens and young tom chickens from the old one. How can I mate those turkeys? Will it do to let them run together? Third—What would you advise me to feed young incubator chickens? Do you think chick food good for them? Mrs. J. M.

Hillsboro Bridge, N. H.

Answer.—First—Read answer to E. E. W. in this issue. Second—The young tom should be mated to the old hens. Third—Any of the prepared chick feed advertised in these columns will do the work.

Editor American Poultry Journal.

Dear Sir: Will you please answer these questions: First—I am thinking of going into the poultry and pet stock business. They way I am thinking of doing is to advertise in my own town and county that I will order poultry and pet stock for any one and receive the goods for them. Are there any such merchants? What are their plans of business? Do breeders pay a commission to such merchants? Second—How long will it be after penning white Wyandotte hens that have been running with other kind of cocks until they lay pure eggs? Fairmont, W. Va. W. P.

Answer.—First—We do not know of any one who is doing a business of this character, and we do not believe you could make a success of it. Second—Ten days to two weeks.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following in your question department: Some of my chickens have lost all of their feathers on neck and legs; have seen them stand and pick each other's feathers. (1) Could that be the cause of such an extensive loss of feathers, or is it lice or mites? What will break them of the habit of picking each other's feathers? (2) I have a rooster with a rattling in his throat and in trying to crow can make but a very weak noise. What is the remedy? Davenport, Iowa. E. E. W.

Answer.—(1) The loss of feathers is probably due to feather-eating. Once this habit is contracted it is almost impossible to stop it. Powdered aloes sprinkled liberally through the feathers will sometimes stop feather-eating. (2) This is bronchitis. Allow the bird to inhale the steam or vapor from boiling water to which has been added a few drops of carbolic acid.

AMERICAN POULTRY JOURNAL'S REMARKABLE SUBSCRIPTION OFFER

If your subscription has expired renew at once so as not to miss the next issue, or, if you are not now a subscriber, we want you for one and make you the following splendid offers: For 50 cents we give you one year's subscription to AMERICAN POULTRY JOURNAL and a set of four beautiful colored pictures of fowls. Or if you secure four subscribers (including your own), we will make you the cut price of 35 cents each.

A subscription to AMERICAN POULTRY JOURNAL this year will mean more than ever before. This year we shall do something no other poultry paper has ever undertaken. Every recognized variety of poultry, ducks, geese and turkeys raised in the United States will appear in AMERICAN POULTRY JOURNAL in colors, nearly 300 specimens. Think for a moment of having so valuable a collection of pictures; it is worth many dollars to every subscriber. We call your attention to our beautiful colored covers.

Remit by money order or stamps (1c stamps preferred). Send at once in order to get all the colored pictures.

Editor American Poultry Journal.

Dear Sir: As I am interested in new and less-known breeds of fowl I would like to know something about the "Campine" breed. What is its color, size, shape and markings, and in what way does it differ from the other breeds of the Hauburg class?

Nyack, N. Y.

R. H. F.

Answer.—Will some of our readers who are familiar with this variety of fowl please answer?

Editor American Poultry Journal.

Dear Sir: Will you please answer this question in your journal: I have two White Wyandotte hens that their eyes swell shut and side of face swells; stays that way for a week. I feed all dry feed, corn, oats, wheat, oyster shells and clean warm water and keep house clean. Can you tell me what is the cause and what to do?

E. I. W.

Medina Co., Ohio.

Answer.—This is roup. All birds in this condition should be isolated and your premises thoroughly disinfected with a 5 per cent solution of carbolic acid. Procure some one of the various roup cures advertised in these columns and give as directed.

Editor American Poultry Journal.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue the following: (1) I have a hen that takes short, quick steps and steps very high. She seems healthy otherwise. (2) I have a Silver Laced Wyandotte male that has red on the back part of the outside of the legs.

Telocaset, Ore.

R. H.

Answer.—This is sometimes due to defective eyesight and sometimes to a diseased condition of the muscles of the legs. There is no remedy that we know of. (2) This is not uncommon.

Editor American Poultry Journal.

Dear Sir: Please answer the following: What was the trouble with my little chicks? They would begin drooping around, turn pale, with running off at the bowels. The droppings were a brick-red color. Would only live about

a day. Would eat very hearty until a little while before they died.

Perryville, Ind.

Mrs. L. C.

Answer.—Lice and improper feeding is the cause of your trouble. Remedy these and you will have no further trouble. Medicine is of no avail for little chicks.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer in your next issue, if possible, the following: (1) What is the best method of ventilation for an incubator cellar where eight or ten incubators are used? (2) What is the best brooding system to install, individually or a long hot water pipe system? (3) What are the best months to hatch chickens in order to get winter layers? (4) Would it pay for a practical poultry man to purchase land near Chicago at \$1,000 per acre and devote part of his time to eggs and broiler raising? (5) How long would a hen be of good service as a layer? (6) Would a 300-egg incubator hatch 100 eggs as well as it would the 300 eggs? (7) What should be the height of a poultry fence to confine the Leghorn class? (8) Do the Plymouth Rocks make good winter layers?

Chicago, Ill.

D. R. T.

Answer.—A number of openings over which burlap or muslin is tacked. Also a ventilator in the roof to let out the impure air that accumulates in the upper part of the room. (2) We prefer individual brooders, but have no fault to find with the others. (3) March, April and May. (4) This all depends on the ability of the man. Some men succeed where others fail. Broiler plants have never been successful in this vicinity; but we believe that an egg and broiler plant combined can be put on a paying basis if properly handled. (5) From two to three years. (6) Yes. (7) Six to eight feet. (8) Yes.

Editor American Poultry Journal.

Dear Sir: Will you please tell me what was wrong with my Single Comb White Leghorn rooster? Was fed oats, wheat and corn. Wheat and corn be-

ing parched occasionally. General health seemed good until his comb commenced bleeding. The blood oozed out on both sides at the back part of comb. Blood ran down over the body until he looked more like a Buff Leghorn. Wattles became longer but not swollen. Comb swelled and of a bright red color near head, darker near top. He would eat but little and finally was found dead. He was not frozen any, not even the tips.

F. W. F.

Dell Roy, Ohio.

Answer.—This was due to poor circulation, probably brought about by lack of exercise and insufficient green food. When a bird gets in this condition there is no remedy.

Editor American Poultry Journal.

Dear Sir: Please answer these questions in your "Question and Answer" Department: I am going to raise Black Orpingtons this year. (1) Would I have to build a poultry house to keep chicks in or would a few brood houses be all right? (2) What size brood houses would I need? Also runs? (3) If hatched in first part of April, with good care, feeding, strain, etc., would they lay in November? (4) What size house would I want in winter for about twenty-five fowls? (5) Is sulphur in drinking water good for chickens? (6) I have some chickens now which eat all the grit in the box but don't touch the oyster shells which I have mixed; why is this?

R. T.

Windsor, Ont.

Answer.—(1) Brood coops or colony house will answer until fall. (2) We do not know, as you do not state how many you are going to raise. (3) Yes. (4) Ten square feet of floor space should be allowed to each fowl. (5) No. (6) They probably get all the lime that nature requires from the grit.

Editor American Poultry Journal.

Dear Sir: What is the cause of hens allowing other hens to pick the feathers from their throat? We have some Buff Orpington hens and they have done well all winter. Now the male bird stands and allows the hens to pick out his feathers until his throat is perfectly bare.

TO FARMERS AND DAIRYMEN

It will pay every farmer or every farmer's wife to sit right down and write for Sharples "Business Dairying." This valuable book contains information that can be found in no other book, and will help any dairyman to make his business more profitable. It tells How to Feed, What to Feed, How to Care for Feed, What Foods Produce Greatest Amount of Milk, How to Care for the Dairy Cow in the way to get best results, and the whole book is practical. To get all the good out of your milk you should of course use

THE SHARPLES TUBULAR CREAM SEPARATOR

It is not only guaranteed to more than pay for itself annually, but the ease with which you can skim, the low can, the self-oiling bearings, the simple Tubular bowl with only one little part inside to wash, the moderate price, are all points you should know about. Send today for the free "Business Dairying" and full information about the Sharples Tubular, giving number of cows you keep. Ask for booklet G. 205

Mrs. J. Renken, Trenton, Ia., says "We cleared \$100.00 in six months off seven cows."

Some of the hens are becoming the same way. We have never seen any lice around. What should we do for them?
Walkerton, Ont. A. S.
Answer.—Read answer to E. E. W. in this issue.

ROCK HILL POULTRY FARM CATALOGUE.

We have had occasion before in these columns to speak of the ever-increasing style, beauty and workmanship of the catalogues and advertising literature that the Fanciers of America are putting out. The latest to come to us is the beautiful catalogue of the Blue Ribbon Poultry, as bred on Rock Hill Poultry Farm, Ossining, New York, of which Gen. E. A. McAlpine is proprietor and F. W. Corey is manager.

We do not believe that the quality of paper in any poultry catalogue ever excelled that of the Rock Hill catalogue. The catalogue is 9x11 inches and contains 40 pages and cover. The cover is a beautiful gray deckle edge paper, neatly printed in blue.

These people have spent a lot of money in taking some magnificent photographs of the Rock Hill Farm and reproduced in the catalogue nine magnificent views of this romantic place, which is rightly named Rock Hill, then follows a large number of photographs of their splendid prize-winning fowls which consist of White, Partridge and Columbian Wyandottes, White and Silver Penciled Plymouth Rocks, Single Comb White Leghorns and Buff Cochins Bantams, besides Pekin Ducks and ornamental fowls. It also includes a complete description of their different matings, with prices of same and prices of eggs for hatching and a complete list of their Show Records from 1905. Illustrations of the Cups and Ribbons that they have won also hold a prominent position in this catalogue.

A copy of this may be secured by addressing the Rock Hill Poultry Farm and mentioning American Poultry Journal.

WEIGHT OF BLACK MINORCAS.

Editor American Poultry Journal.

Dear Sir: I have read with interest the editorial of George H. Dexter, of Everett, Mass., in regard to the present weight of S. C. Black Minorcas. I have been breeding this grand breed for some time and am heartily in favor of a reduction in weight, for several reasons. In northern latitudes it is very hard to bring them up to present standard requirements. The increased size makes them appear awkward and ungainly and is therefore a gross injustice to general appearance. Breeding for size is a detriment to their egg producing qualities, thus losing the good impression they have had with the public as a general utility fowl. I would favor petitioning the American Poultry Association to lower the weights to the old standard, namely, cock, 8 pounds; cockerel, 6½ pounds; hen, 6½ pounds; pullet, 5½ pounds.

F. C. Newcomb.

Sault Ste. Marie, Mich.

If you want to raise some exhibition White Wyandottes, send to Edward E. Ling, South Portland, Me., for a setting of eggs. Mr. Ling is reliable.

J. S. Martin, Port Dover, Ont., Canada, won several prizes at the late Boston show on White Wyandottes, including first cock. Send for circular.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

NEW BERLIN, N. Y., SHOW.

The first annual exhibition of the Unadilla Valley Poultry and Pet Stock Association, held at New Berlin, N. Y., January 29 to February 1, 1907, was a big success. There were about 700 birds of high quality. Among the leading classes were White Leghorns, 70; Barred Rocks, 40; S. C. B. Minorcas, 41; R. I. Reds, 42; Buff Orpingtons, 31; R. C. B. Minorcas, 30.

The Poultry Success Silver Cup for best cock in the show was won by a Buff Orpington.

Successful P. J. Silver Cup for best two birds was won by a pair of White Leghorns.

J. Y. Bicknell placed the awards and gave general satisfaction to all exhibitors and members of the association.

Arrangements were very systematic, and the cooping, lighting and care all that could be desired. There was nothing but praise for the manner in which it was officered and managed. The coops used are owned by the association.

The lectures in the evening by noted experts were well attended and proved very helpful and interesting. The management was well satisfied with its success from every standpoint, and is planning to make the second show in 1908 even better and bigger.

Archie E. Van Der Vort.

PROSPECT, PA., SHOW.

The first annual poultry show was held February 28 and March 1-2, 1907, on the first floor of the I. O. O. F. building, a large and commodious hall, that was lighted to perfection. The show was well up in quality, having all the leading varieties well represented with birds that did their owners justice. There were a number of birds on exhibition that had swept the deck at several other shows and this being the last show of the season at which they were again placed on exhibition for a final round-up of the ribbons. The show was judged by score card by H. A. Emmell, and his scoring was impartial and gave entire satisfac-

tion. The attendance was good, there being many visiting fanciers from nearby towns. Everyone was well pleased and went home satisfied, having had the interest created to make the next show one that will be a record-breaker, as the officers have already taken action for their next show. The Prairie State Incubators and Brooders were represented. The officers consist of the business men of the town, as follows: L. M. Roth, president; Harry Heyle, treasurer; B. L. Roxbury, superintendent; Jas. A. McGowan, assistant superintendent, and F. B. Forrester, secretary, who extend their thanks to the patrons, and also extend their invitation for their support toward making their next show one of the best in western Pennsylvania.

OELWEIN, IOWA.

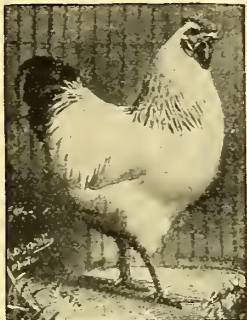

The second annual exhibit of the Oelwein Poultry Association, which was held January 28-31, 1907, was a decided success. All the cash premiums, amounting to about two hundred dollars (\$200) were paid in full at the close of the show.

The competition in most of the leading varieties was very keen, but Judge Russell placed the awards in a very satisfactory manner.

It is the intention of the association to double the cash premiums next year.

The new officers for 1907-08, elected at the last meeting, are: President, J. E. Lilley; vice-president, S. L. Johnson;

Catalogue of AMERICA'S BEST free.

A. C. HAWKINS, Lock Box 25, Lancaster, Mass.

WHITE WYANDOTTES

THAT STILL MAINTAIN THEIR RECORD OF WINNING THE BLUES WHEREVER SHOWN

EGGS From prize winning pens only, for sale. My strain is bred equally as much for utility, vigor, size and hardy constitutions as for beauty. My prices are as low as the lowest when quality is considered. A grand lot of young stock for sale. Correspondence a pleasure. Mention American Poultry Journal. ❀ ❀ ❀

D. D. SLADE 227 W. Short St. LEXINGTON, KY.

R. B. BRIDGEMAN

W. C. "BILLIE" YORK

WHITE WYANDOTTES

Winners at the leading state shows of America. At the recent Missouri State Show we made almost a clean sweep in the White Wyandotte alley. Also won the \$30 silver cup for best pen of white fowls in the show. This is merely a repetition of former great records. Show birds for any show in the world. Quality eggs for hatching. Catalogue free.

BRIDGEMAN & YORK

Box 33, FOREST CITY, MO.

GEORGE'S WHITE ROCKS

Are still winning wherever shown. Our wonderful record at Chicago, Boston and New York, prove their superior quality. We have a very fine lot of absolutely pure white, fine shaped cockerels for sale at \$5, \$8 and \$10 each. They have fine, low, even combs, nice bay eyes and yellow legs. They are show birds as well as fine breeding cockerels. Eggs from prize matings, one sitting \$5, two sittings \$8, three sittings \$10 and \$20 per hundred.

E. H. & S. H. GEORGE

Groveland, Mass.

True to Name, Birds of Quality, are Lapham's Buff Ply. Rocks.

First pullet at Detroit, score 95. My last winning at Detroit, Mich., Jan. 4 to 9, 1907, 1st pen, 1st and 2d pullet, 1st, 2d, 5th hens, 3d, 4th, 5th cocks, 3d, 4th cockerels, special for best shaped male and female, best colored male and female; also the American Buff Rock cup for best display. I will have ten pens carefully mated up of birds with a world's record, and I promise my customers more for their money than ever before, and guarantee to please or money refunded. Eggs \$2, \$3 and \$5 per 15. Write for my new catalogue, which is free on request. Show birds and breeders always on hand. Remember the name, the Gold Medal Strain. Please mention this paper.

Dearborn, Mich.

PRIZE WINNERS FOR SALE CHEAP

By the Great Central Poultry Farm

In eight weeks our birds have won 3000 prizes at state and county fairs. This indicates the quality of our stock. There is no better in the country. As breeders we fully understand our business. We ship nothing but standard birds. They are fully guaranteed and warranted to reach our customers at the nearest express office in good condition. If any fowl fails to do this we duplicate the bird. Eggs in season from all our breeds. We are now booking orders for stock, shipping daily.

We have recently purchased the entire stock of one of the largest breeders of Partridge Cochins in the United States, and we are able to furnish prize winners in this variety. Send for our special prices. We offer the following varieties to our customers:

Light Brahmas,
Dark Brahmas,
Partridge Cochins,
Buff Cochins,
*White Cochins,
*Black Cochins,

Stock—single birds, \$2.50; pairs, \$4.50; trios, \$6; pens, \$10. Mammoth Pekin Ducks: Stock—single birds, \$2; pairs, \$4; trios, \$6; pens, \$10. Toulouse Geese: Stock—single birds, \$4; pairs, \$7; trios, \$10; pens, \$16. Mammoth Bronze and White Holland Turkeys: Single birds, \$5; pairs, \$9; trios, \$12; pens, \$18. Prices for varieties marked with a star as follows: Single birds, \$4; pairs, \$7; trios, \$10.

Our prices for eggs are as follows: Eggs from all varieties marked with a star, \$2.50 per setting or \$4.50 for two settings. Eggs from all other varieties, \$1.50 per setting; \$2.50 for two settings, with the exception of the following varieties, namely, Partridge Plymouth Rocks, Silver Penciled P. Rocks, Partridge Wyandottes, Silver P. Wyandottes, Columbian Wyandottes, Golden Polish and Silver Polish. Eggs from these birds we will furnish at \$2.50 per setting. We also furnish eggs from White and Pearl Guineas at \$2 per setting of 13 eggs. Of these nine last named varieties we will sell eggs only.

We have thousands of birds bred on the same line as these prize winners. Do not hesitate to order direct from this ad. Send for our special prices, also for our free catalog. Enclose 10c stamp to cover mailing.

Write us for circulars and special prices on our improved Great Central Incubators and Brooders, the most dependable and surest hatch machine on the market. Insure your success by hatching our eggs in our incubators and raising the chicks in our brooders. This is a winning combination. Address all our correspondence to Freeport.

THE F. W. NIESMAN CO., Box 40, Freeport, Ill.

treasurer, A. H. Ford; superintendent, J. A. Eller; secretary, Dr. F. D. Miner. Judge Chas. McClave, of New London, Ohio, has been selected to place the awards at our show, which will be held January 21-25, 1908.

The management consists of conservative business men and true fanciers and they are promising the poultry-loving people something extra good at our third annual show.

All past exhibitors and many new ones are cordially invited to be with us in 1908.

F. D. Miner, Secretary.

BUFFALO, N. Y.

Please announce the following in your journal: All ye breeders of poultry, pigeons and pet stock, sit up and take notice. The city of Buffalo, N. Y., the Queen City of the Great Lakes, is no more among the dead ones. The Buffalo Poultry, Pigeon and Pet Stock Association has been incorporated with a capital stock of \$3,000, for the purpose of holding a show at Convention Hall next season, date to be announced later. Over one hundred names were added to the membership roll in two months, and this association bids fair to be one of the largest in the United States in less than two months' time. Buffalo and its surroundings are sadly afflicted with the poultry fever. The following officers have been elected for 1907: Dr. G. Lestre, president; J. Thomas Harpe, vice-president; G. J. Felluer, secretary, 37 Condon avenue.

RUTHERFORD, N. J.

The last monthly meeting of the Rutherford (N. J.) Poultry, Pigeon and Pet Stock Association was also the annual meeting for the election of officers. The reports of the retiring officers and committees showed that the year just closed has been all that could be desired. While the effort to re-elect the entire staff failed, the president and the treasurer were, however, induced and unanimously re-elected to their respective posts. The popularity of the present incumbents was proved by the enthusiastic balloting, which resulted as follows: President, W. E. French, Rutherford; vice-president, A. E. Robst, Carlton Hill; secretary, A. A. Winkler, Rutherford; treasurer, G. C. Brinkerhoff, Rutherford; auditor, F. A. Stedman, Rutherford; executive committee, E. J. Irwin, Rutherford; A. E. Robst, Carlton Hill; F. A. Stedman, Rutherford.

ANN ARBOR, MICH.

The Ann Arbor Poultry Show this year was larger and of better quality than any previous year. The midway exhibit of wild game birds and rare domestic birds was the talk of the state. The boys at Ann Arbor seem to have the faculty of getting the rare exhibits and plenty of them. The classes in the regular exhibit were very strong in the leading varieties. At their annual meeting the following officers were elected: E. W. Owen, president; A. Franklin Smith, secretary; Frank Buell, superintendent. No judges were chosen at the meeting, but the boys are awaiting terms from several of the leading ones.

Geo. R. Cooper, Secretary.

LA CROSSE, WIS.

The next show of the Western Wisconsin Poultry Association will be held

at La Crosse, Wis., December 11-16, 1907, with James A. Tucker judge.

The association has elected the following officers: President, Emil Ruprecht; vice-president, C. C. Looney; treasurer, Joseph J. Frisch; secretary, E. H. Hoffman; show secretary, S. J. Roden; directors, Emil Ruprecht, C. C. Looney, S. J. Roden, Joseph J. Frisch, C. E. Smith, O. W. Naas, E. H. Hoffman, John E. Houser and C. F. Lang.

E. H. Hoffman, Secretary.

R. C. W. LEGHORN CLUBS ATTENTION.

Hereafter there will be but one R. C. W. Leghorn Club, known as the National R. C. W. Leghorn Club. As it was resolved by the members of the American to consolidate with the National at their annual meeting which was held at Chicago, January 25, a committee was appointed to draft new by-laws for the club and all members will receive same as soon as completed; it was also decided to issue a catalogue as soon as possible. The officers of the National R. C. W. Leghorn Club for the present year are as follows: President, I. Malpress, Oak Park, Ill.; secretary and treasurer, John J. Peters, Lincoln, Ill. For application blanks, send to John J. Peters, secretary, Lincoln, Ill.

NATIONAL BRONZE TURKEY CLUB.

The annual meeting of the National Bronze Turkey Club was held at Chicago, January 25, 4 p. m. The club offers a handsome silver cup, valued at \$25.00, to any state showing ten paid up members, four special ribbons to any state showing four paid up members, to be competed for by members only. The officers for 1907 are: President, B. T. Hislop, Milford, Ill.; vice-president, O. K. Richey, Rensselaer, Ind.; secretary-treasurer, E. F. Pullins, Rensselaer, Ind.

PARTRIDGE WYANDOTTE CLUB OF AMERICA.

The annual meeting of the Partridge Wyandotte Club of America was held January 17 at Boston, Mass., in conjunction with the Boston show. The officers elected for 1907 were: President, M. H. Coffin, Whitinsville, Mass.; first vice-president, C. E. George, Union City,

Mich.; second vice-president, C. F. Early, East Palestine, Ohio; third vice-president, Wm. R. Fretz, Arkansas City, Kan.; secretary and treasurer, H. R. Hildreth, Worcester, Mass. The following were elected club judges for 1907: Geo. V.

Doolittle, Sabetha, Kan. The president-elect was authorized to make up the board of state directors. The following are the gentlemen he named to fill these places: R. T. Hack, Gorham, Me.; J. J. Croft, Burlington, Vt.; C. H. Brundage,

WHITE PLYMOUTH ROCK HEN.

A winner at Madison Square Garden, Boston and White Plains. Bred and owned by Greystone Poultry Farm, Yonkers, N. Y.

Fletcher, Belmont, Mass.; F. W. Rogers, Danbury, Conn.; E. A. Parks, Jamesville, N. Y.; Eugene Sites, Elyria, Ohio; F. A. Keller, Tionesta, Pa.; C. F. N. J.; F. H. Hodges, Red Bank, N. J.; F. A. Keller, Tionesta, Pa.; Early, East Palestine, Ohio; W. A. W. S. Davis, LaGrange, Ga.; W. W.

Keeler's White Wyandottes The World's Greatest Strain

THE STRAIN of the correct type, the winning type, the strain that breeds on and on, reproducing itself true to type. The Keeler strain is true Wyandotte and will breed you true Wyandotte shape; their ancestors have been winners at America's leading shows for the past twelve years. They are winning today and will win in the future because they have more carefully bred blood lines than any other strain in existence, setting the stakes five (5) years ahead of their closest competitors; they are in fact as well as in name,

The World's Greatest Strain

Do you want eggs from my eight (8) grand pens containing the cream of the best birds raised the past four years. They have nice curving corrugated combs, red eyes, nice arched necks, broad back, short, well spread tails, full round broad breasts, fine yellow legs and beak, standard weight or over; are white from surface to skin and will stay white in the hottest summer sun. My forty-page illustrated catalogue that shows them as the camera saw them will convince you, it's free for the asking, send for it today. Eggs from the finest of exhibition matings \$5 per fifteen, \$9.50 per thirty, \$15 per fifty and \$25 per hundred.

Chas. V. Keeler, Box 900, Winamac, Ind.

CONGO

There is nothing in Congo Roofing that will dissolve in water, nothing that will evaporate, nothing that will be effected by heat or cold, nothing that will decompose.

It is practically indestructible by weather. It is built to endure hot weather,

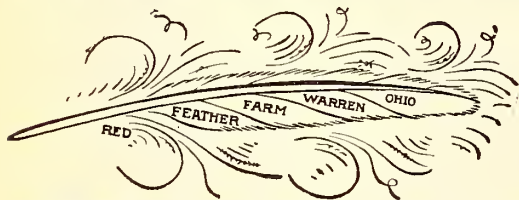

ROOFING

cold weather, wet weather. It is a valuable fire retardent.

Test a Sample of it. We will send one free on request. Try it by any experiment you please and you will understand the confidence with which we back up Congo Roofing.

Address **Buchanan-Foster Company**
Philadelphia, 1033 Monadnock Bldg., San Francisco

HOME OF THE BEST BUCKEYES in the WORLD

Forty scoring from 90 to 95, mated for the 1907 egg trade. Circular and Club Booklet free. Get the best from the originator.

MRS. FRANK METCALF
Red Feather Farm, Warren, Ohio

STANDARD OF QUALITY

Standard Special Brand Chick Feed—Standard Brand Laying Feed

Sold on its merits. Composed of selected grains and seeds, no waste, scientifically balanced. Being located in the heart of the grain and seed belt, we make a specialty of millet, sun flower, kaffir corn, hulled oats, corn, buckwheat, rape, etc. Also beef blood and bone products, grit, oyster shell, linseed meal, etc. Send for samples, prices and descriptive circular. Interesting prices on ton and car lots. Send for illustrated seed catalogue.

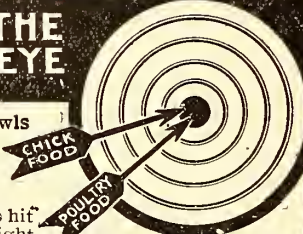

The Mangelsdorf Bros. Co., Seedsmen, Atchison, Kansas

SLEEPY EYE HITS THE BULL'S-EYE

The matter of selecting the best feed for your fowls should receive careful consideration. Poultry profits depend very much upon the feed. With the right sort of feed your chickens will prosper and you'll prosper with them. **Sleepy Eye Feeds** hit the mark. They furnish you just the right variety to keep your birds in splendid condition—healthy and happy. Feed **Sleepy Eye**—your hens will lay an abundance of eggs and your little chicks will grow fast and develop to the profitable age in shortest possible time at least expense.

**ALWAYS READY
ALWAYS RIGHT**

SLEEPY EYE Poultry Food--Chick Food

are scientifically blended from the choicest grains, seeds, etc., and need no preparation whatever—they are **right** and **ready to feed** when you get them. We mix them and save you the trouble. The **Chick Food** takes the little chick from the time it leaves the shell until it's eight weeks old when it is ready for the **Poultry Food**. Both are dry foods—the kind nature intended chickens to eat and the best that money can buy. We'd like to send you samples of both so that you can see how good they are. If you will write us today, giving us your dealer's name, mention name of this paper, and tell us how many fowls you feed, we will send you samples of the feeds, and a set of beautiful colored Indian Post Cards, **free**. Write today.

SLEEPY EYE MILLING CO., Sleepy Eye, Minn.

Sharpe, Inskip, Knox County, Tenn.; R. K. Harris, Whitewright, Texas; C. F. Early, East Palestine, Ohio; W. W. Williams, Seybrook, Ill.; Carver & Avey, Columbia City, Ind.; Dr. N. E. Mighell, Marshalltown, Iowa; C. M. Baskerville, Mt. Pleasant, Mich.; O. B. Cannon, Elsberry, Mo.; W. A. Doolittle, Sabetha, Kan.; C. M. Barney, Beaver Dam, Wis.; W. S. Snyder, Ethen, Okla.; L. E. Bukey, 100 B. F. Conlter Bldg., Los Angeles, Cal. The old board of auditors, consisting of Geo. V. Fletcher, Belmont, Mass., and J. C. Macomber, Reading, Mass., was re-elected for 1907. It was voted to hold the next annual club meeting at Worcester, Mass., dates to correspond with show dates of the Worcester Poultry Association.

It is purposed to get out a club catalogue for 1907; this to contain the by-laws, list of officers and the revised club standard.

Every breeder of Partridge Wyandottes is urged to join the club, and it is hoped if any have failed to keep up their dues, they will renew their membership. It costs \$2.00 to join the club, \$1.00 for initiation, and \$1.00 for dues, payable on or before October 1 of each year.

H. R. Hildreth,
Secretary and Treasurer.

AMERICAN POLISH CLUB.

The sixth annual meeting of the American Polish Club was held at Pittsburg, Pa., February 20, 1907, during the week of the Pittsburg show, and was only fairly well attended, most of the members sending in their votes by mail. The secretary-treasurer's report showed a neat balance in the treasury after paying for prize ribbons and cups offered at this show, as well as a number of state cups and other expenses. All the old officers were unanimously re-elected for another year, which are as follows: President, Chas. L. Seely, Afton, N. Y.; general vice-president, B. F. Bryant, Johnson Creek, N. Y.; secretary-treasurer, M. V. Caldwell, Leetonia, Ohio; assistant secretary-treasurer, W. H. Card, Bristol, Conn. Our membership list is rapidly increasing and the big list of cups, cash and ribbons offered by our club and its members was the means of bringing out the finest and best display of Polish ever seen in America at this show, there being 121 Polish shown, of gilt edge quality. The White Crested Blacks head the list with 41 birds, and a finer display would be hard to find; in fact, it is the best display we ever saw. In hens, cockerels and pullets there certainly were some hummers; for size, crests, shape and color their equal has never been shown. Plain Silvers, plain Goldens, Bearded Goldens, Bearded Whites and Buff Laced loomed up strong, both in numbers and quality. In fact, the winners in all classes had quality to burn, Plain White and Bearded Silver small classes, but very good quality. Taking the exhibit as a whole, we believe it was one of the best, if not the best, ever put up in this country, as there were certainly some stars in all classes, and a number of Boston, New York and Chicago winners were on deck to compete for the honors. Now is the time to become identified with the club, Mr. Polish Breeder, and \$1.00 will put you on the inside. Better send it today. A stamp will bring you our club catalogue.

M. V. Caldwell, Secretary,
Leetonia, Ohio.

THE WORLD'S FOREMOST WHITE WYANDOTTE BREEDERS.

Breeders of the "World's Best" Strain of White Wyandottes, Messrs. J. C. Fishel & Son, of Hope, Indiana. Hope, Indiana, a small town of about 1,500 inhabitants, situated on the branch line of the Big Four railroad between Greensburg and Columbus, Indiana, a few years ago was unknown to

the outside world, but the firm of J. C. Fishel & Son, breeders of the "World's Best" White Wyandottes, has caused the name of this little city to be put on the map in large letters and to be known the world over as the home of the White Wyandottes.

Messrs. J. C. Fishel & Son make the poultry business a business and not a side line. Mr. J. C. Fishel and his son, C. I. Fishel, devote the whole of their time to the care of their stock, also have hired help, as it takes much of their time attending to the heavy mail.

Mr. J. C. Fishel issued his first catalogue in the fall of 1882, then a breeder of Dark Brahmas; later he bred Light Brahmas and carried off some of the highest honors on the Brahmas at the Pan-American Exposition. He has tried almost every variety of fowls, his son always helping him care for the birds, making the poultry business a life-time study.

A few years ago when Mr. Fishel was in the hardware business he and his son decided to try White Wyandottes, so they purchased some very fine eggs from several good breeders and from these eggs Messrs. Fishel & Son have succeeded in establishing what is to-day the largest, as well as the best, White Wyandotte farm in the world. There has been more or less criticism of the trademark used by Messrs. Fishel & Son in their advertising, claiming their strain as the world's best. A few words in reference to this will not be out of place. When the question of giving up all other business and devoting their entire time and attention to the breeding of White Wyandottes was discussed, it was with the understanding that they were going to have the best strain of this variety known, and they proposed to keep at it until they were entitled to this trademark. Their winnings for the past two seasons have demonstrated to the world that they were not wrong in assuming this broad title, which no other brother fancier can justly dispute, as they have maintained their high record in four of the largest White Wyandotte shows held in the Middle West in the year 1906. We refer to Cincinnati, Ohio, where the American Poultry Association met in January; again at Indianapolis

You Want a Substantial Poultry Fence

One that will not yield and tear when it receives a little extra strain, which is bound to happen occasionally, especially where poultry yards adjoin barn lots. Advance Poultry fence is strong enough to turn any farm stock. Nor is this strength wasted because it means long life—4 or 5 times as long as poultry netting or light poultry fence. Considering the extra posts and railing needed for poultry netting, Advance Poultry fence costs no more than netting. To sum up, it is several times as strong, lasts several times as long and costs no more than netting. Therefore Advance Poultry fence is the most practical fence for poultrymen.

Advance Poultry fence is of the same high-grade construction as our famous Advance Farm Fence. All whole wire, no short pieces used. Our stay wire is NEVER cut, but runs continuously up and down across the fence for many rods without an end. Thus we preserve and utilize ALL the strength and service there is in the wire, fully half of which is wasted in cut stay fences—sacrificed to convenience and speed in manufacture. When fence made of WHOLE WIRE costs no more, why buy fence made of shorts?

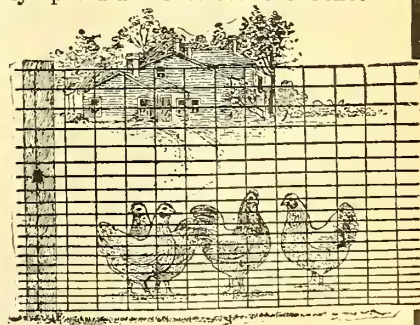

Sold on Approval. We want you to see and examine Advance Fence—to compare its construction with others. Let us ship you what you need on 30 days approval. After a careful examination, comparison and a thorough test, if you wish you may return the whole business, and it won't cost you a cent as we will pay the freight both ways and refund every cent you paid. Our long experience with Advance fence gives us the confidence to make this liberal offer.

We prepay freight and guarantee the safe delivery of your shipment. Write today for our Free Fence Book and Freight Paid Prices.

ADVANCE FENCE CO.

13' OLD ST.

PEORIA, ILL.

STEEL ROOFING \$1.50 PER 100 SQUARE FEET

Best, economical and durable roof covering known. Easy to put on; requires hatchet or a hammer. With ordinary care, will last many years. Thousands of satisfied customers everywhere have proven its virtues. Suitable for covering buildings of any kind. Also used for ceiling and siding. Fire-proof and water-proof. Cheaper and more lasting than shingles. Will not taint rainwater. Makes your building cooler in summer and warmer in winter. Absolutely perfect, brand new. \$1.50 is our price for our No. 16 grade of Flat Semi-Hardened steel roofing and siding, each sheet 24 in. wide and 24 in. long. Our price on the corrugated, like illustration, sheets 22 in. wide and 24 in. long \$1.75. At 25 cents per square additional we will furnish sheets 6, 7, and 8 feet long.

BRICK SIDING, \$1.95

Just the right thing for stores, hothouses, churches, barns, hotels, etc. Why not fit up your old building by covering it with bright, fresh brick siding! Easily put on. Made of semi-hardened steel. Looks like brick. No special tools required. Prevents decay. Decreases fire liability. Improves appearance of premises. Adaptable for buildings of all kinds. We sell immense quantities. Gives thorough satisfaction. Comes in sheets 24x58 inches. Has all good points of steel roofing. Remember we manufacture our own roofing and are the original headquarters for steel roofing.

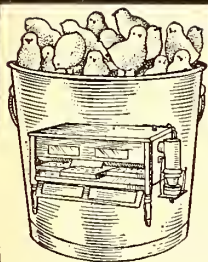

METAL CEILINGS, \$1.95

Fine steel beaded ceilings. \$2.00 per 100 square feet. Ideal ceiling for stores, offices, kitchens, restaurants, etc. No falling plaster. Always neat and attractive. Economical and n lasting. Furnished ready to put up. No special tools required. Comes in sheets 24 inches by six and eight feet long. Also used for siding.

WE WILL PAY FREIGHT ON ALL ORDERS for Metal Roofing, Beaded Ceiling and Brick Siding to points east of Col.—except in Okla., Tex. and Ind. Ter. Prices to these points, freight paid, furnished on application. We guarantee all roofing to be as represented. All kinds of roofing supplies—galvanized conductor pipe, eave trough, pipe, fittings, plumbing supplies, etc. Write for free catalog No. 96

CENTRAL MACHINERY & SUPPLY CO., 547-559 State Street, CHICAGO, ILL.

The CONTINUOUS HATCHER

Let us send you our free catalog. If in the market for an incubator—As our Continuous Hatcher possesses features that are not found in any other make of incubator. Our customers will convince you that our machine makes good all that is claimed for it in our catalog. It approaches as near as it will be possible to natural incubation. If you do not send for our catalog, you will regret it.

Following report we received from the Mich. Agricul. College. Hacker Incubator Mfg. Co., Agricultural College P. O. Mich. St. Louis, Mo. Sept. 11th 1906.

Gentlemen—In reply to your request of 24th regarding the Continuous Hatching Machine used here at the college; I would say that the man that ran the machine is now absent from the college and a more detailed report will be sent you as soon as we can secure it from him. He gave me a verbal report in which he stated that the machine did very good work.

Yours very truly, Jas G. Halpin.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks it has no equal. No mashers or cooking feed under this great system. Broilers go 1½ to 1¾ lbs. in seven weeks on it. No science required to feed my system. Failure impossible. Start right. Circular and testimonials free. Write today and stop that big feed bill.

EDGAR BRIGGS, Box A

NEW ROCHELLE, N. Y.

Give me Darling's Chick Feed and I can raise 95 per cent of all the little chicks I can hatch. I have proved this.

JAMES GAGE,
Elgin, Texas.

What % Do You Raise

It is no trouble to hatch chicks. All the trouble lies in the raising.

They die of bowel trouble, of sleepy disease, and other causes. The cause of these complaints, and the real cause of the enormous death rate, is improper feeding.

No question about it—90% of all the deaths among little chicks is due to improper feeding.

The real need among poultrymen is for a feed that the unused stomachs of little chicks will stand,—a feed to save their lives.

Darling's Chick Feed

Is a Feed that is Adapted to Little Chicks' Needs

It is a scientifically balanced food, composed only of selected seeds and grains. Properly screened and cleaned and reduced to the proper size.

A feed that the chicks can digest. Not sweepings or waste from some mill.

We are not in the milling business and we are not making breakfast foods. It is not a by-product from any manufactured article, but prepared specially and solely for feeding little chicks.

It procures a rapid growth, gives a good, strong framework, and makes larger and better market fowls and laying hens.

Your order is solicited on a trial shipment. With the results it gives, you will find it the cheapest chick food you can buy.

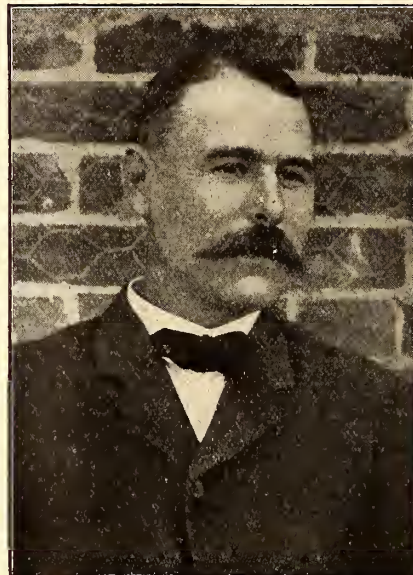

Price \$2.50 per 100-lb. Bag, F. O. B. Cars, Chicago or New York. Cash with order.

Darling's 100-Lb. Bag Line

Prices f. o. b. cars. Cash with order. Our catalog gives particulars on feeds and feeding and lists a full line of up-to-date supplies. Write for copy.

DARLING & COMPANY, Box C, Long Island City, New York. Box C, Union Stock Yards, Chicago.

in February, 1906; the Indiana State Fair, September, 1906; and the Great Tennessee State Fair, held in Nashville, Tenn., October, 1906. In these four exhibitions the Fishel White Wyandottes won more first and second prizes than all exhibitors combined, and their stock

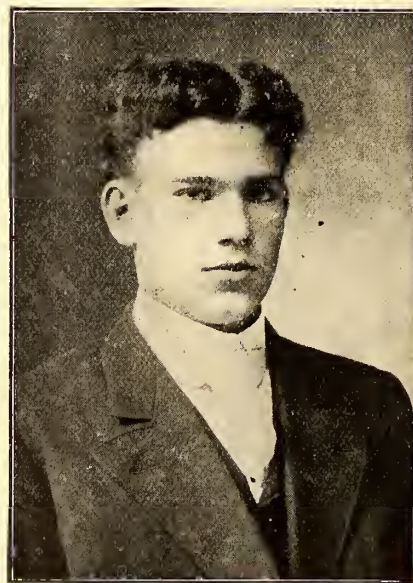

J. C. FISHEL,

Member of the firm of J. C. Fishel & Son, Hope, Ind.

was in competition with the best breeders from all sections of the country, East, West, North and South.

They are justly entitled to their trademark, not only from the quality of the birds they are breeding, but from their individual efforts in pushing this, the most important of all the Wyandotte family, to the front as they should. They

CHARLES I. FISHEL,

Member of the firm of J. C. Fishel & Son, Hope, Ind.

have spared neither time nor money to get their birds to sustain their claim of the "World's Best" which they have done. From a small plant of less than two acres of ground, their breeding yards now cover something like twenty

acres and preparations are being made to take in additional space in order to handle their fast growing business. They built several new houses this winter, one of which was 150 feet long.

As to the quality of their stock, their show record proves their claims of superiority, but in looking at the quality of one year ago, they have undoubtedly made an improvement of twenty-five per cent in shape and more than that in color. They have a right to claim a stay white strain of White Wyandottes as their birds are absolutely white, showing no signs of brass, and particularly no signs of cream in under-color, and in bringing up this high standard of color on plumage they have done so without a loss of color in eyes or legs. Their birds, taking their flock all through, are better in this respect than ever before and as good as the average White Rocks in the country. As to shape, Messrs. Fishel & Son have always fought for a bird with curves. They are in strict accord with the standard makers and believe that the standard wording for shape is the correct one and every Wyandotte breeder, no matter what the variety, should conform to it. They have demonstrated clearly that they are able to produce size in cocks and hens and still hold the short necks, short backs, and short bodies demanded by the standard.

Push and push hard has been their motto. Spend money where it is necessary, not alone for good stock, but in telling the people of the country what they have to sell, has brought Fishel's White Wyandottes so prominently before the country that no matter where you go, when White Wyandottes are discussed, the name of Fishel is mentioned.

Their business is growing rapidly, which is producing evidence to prospective buyers that they have what they claim, and they intend to keep the "World's Best." They now have about 500 early hatched chicks, some of them hatched the last of January and are promising chicks for the early fairs.

There is no time in the year, if you would call at Messrs. Fishel & Son's office, at the east side of Hope, Indiana, but what you would get a hearty welcome and find them busy looking after the interests of their flock, answering their mail and filling orders. There is not a bird shipped without first being inspected by Mr. Fishel or his son.

We wish to say to our readers who are interested in White Wyandottes and are looking for quality, it will pay you to correspond with these enterprising poultrymen. Write them for their catalogue, which is full of valuable information not only for the beginner but for the older breeder as well. While there are breeders who may be jealous of their success, it is a noted fact that J. C. Fishel & Son have done and are doing more to promote the interest in this variety than any other ten men in America, and they are doing it at their own expense, not only in advertising but in showing their stock, and are entitled to the consideration and patronage of every breeder of this variety who is in need of stock or eggs. They have fifteen yards mated with their very best birds and are in position to supply the egg trade with eggs that will produce the very best quality that has ever been offered in this variety.

The American Poultry Journal compliments Messrs. Fishel & Son on their enterprise and push.

HOW TO START WITH BANTAMS.

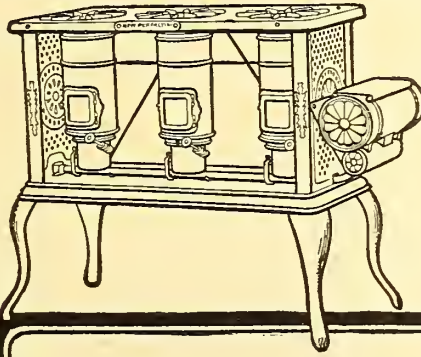

By E. J. W. DIETZ, DOWNERS GROVE, ILL.

This is a problem which confronts everyone when taking up a new variety of fowls, and it also applies to bantams. The question is—shall we buy eggs or fowls?

There are only a few bantam fanciers who offer eggs for sale, and when they do, usually refuse to give any kind of a promise or guarantee that they will

hatch. The reason for this is that bantam eggs do not hatch like big chickens. They usually require more moisture. The only 100 per cent hatch of bantam eggs in our town last year was a hen which stole her nest under a leaf and she faithfully set the twenty-one days regardless of a couple of severe thunderstorms.

The bantam fancier hesitates about selling eggs because he usually has only a few hens in each pen, and as he is interested in seeing the result of his matings, he prefers to hatch out and

The New Oil Stove

Different from other oil stoves. Superior because of its economy, cleanliness, and easy operation. The

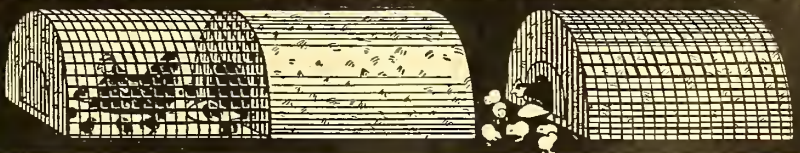

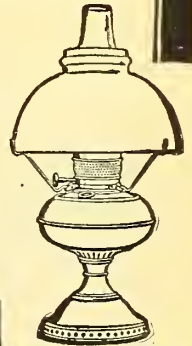

NEW PERFECTION Wick Blue Flame Oil Cook-Stove

saves fuel expense and lessens the work. Produces a strong working flame instantly. Flame always under immediate control. Gives quick results without overheating the kitchen. Made in three sizes. Every stove warranted. If not at your dealer's, write our nearest agency for descriptive circular.

THE Rayo Lamp

is the best lamp for all-round household use. Made of brass throughout and beautifully nicked. Perfectly constructed; absolutely safe; unexcelled in light-giving power; an ornament to any room. Every lamp warranted. If not at your dealer's, write to our nearest agency.

STANDARD OIL COMPANY

IDEAL TRAP-NESTS

SHOW WHICH HEN LAID THE EGG

INSTALL A FACTORY

Weed out the drones. Get more eggs with less feed. Know the chick's dam. The "IDEAL" turns out true answers. No watching. Convenient, compact, accurate, inexpensive; 10 in use to 1 of any other. 8th year; endorsed by all who know. Plans, Traps, Bands, Record Sheets. Write for prices and "Symposium of Evidence." F. O. WELLCOME, York St., Yarmouth, Maine

keep to maturity all he can so he may be guided in his future selection.

Many do not know or appreciate the care necessary to produce fine fowls successfully for a period of years. One of the first bantam books I ever read told about a successful exhibitor who for twenty years had not gone outside of his own flock or their offspring in his matings for his breeding pens. He did, however, occasionally buy back single birds from those to whom he had sold a pair or trio and often gave them for this one bird as much as they had paid for the pair. This new purchase was put back in his own flock with success.

We are always happy when we achieve something. When we get the idea to buy some bantams we usually hope to achieve success in rearing their offspring. Now, success in bantam culture is not only in the number raised, but the quality—a few good ones are always more pleasing than a number of scrubs. Therefore, the best way is to send to a breeder for a mated pair or trio. Do not get a printed description of the variety you want and copy it into the letter. I have had boys write me for birds and describe their characteristics so high that I have often thought if I could get such an ideal bird as described I would trade my whole flock for it. But rather write the breeder and tell him what you hope to do and about how much you can afford to pay for a pair of the kind you want. The true bantam fancier is not a Shylock nor a Robin Hood, but generally is a kind-hearted man, and if you can gain his confidence you will gain more than by haggling over the price. When you get from him a mated pair—that is, a male and female so selected that a majority of their offspring should be fit to show and pass the judge's criticism—you are taking up the subject at a point it has probably taken him years to gain. When you pay the price he sets he respects and esteems you and in most cases stands ready to give you such advice as you may need in your future breeding operations.

There are many little hints for the handling or care of birds which fanciers jealously guard, but if you have gained his favor he will help you from time to time.

POULTRY COMFORT ROOST.

Not only for the comfort of poultry, but also for the comfort of my tallow poultrymen, I desire to give my experience in addition to W. S. Crandall in March American Poultry Journal, page 313. I have used moth balls in nests with the same good results, and my roosts are 2x4 with holes bored every eight to ten inches, deep enough to hold a moth ball. Have used the same building for years, and am willing to wager that you cannot find any lice on any of my fowls or mites in the building at any season of the year. J. F. KALE.

Warren, O.

William Miller, Crescent, Mo., has some well-bred fox terriers for sale. Every poultry man should have one of these rat exterminators.

James Workman, French Village, Ill., breeder of White Wyandottes, has several pens mated up for best results. Send for circular.

Send to A. B. White, Nichols, Mo., for a setting of Black Langshan eggs. Mr. White is one of the foremost breeders in the country.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

IN TIMES OF NEED.

A Michigan woman who is often called upon to address representative bodies of thinkers, chose for the subject of a recent talk, given at a series of state Farmers' Institutes, this thought provoker: "What would you do if ———?" She spoke of the sudden emergencies which come to every woman, bringing with them the need for quick action and a cool head. Her subject is one which should receive the thoughtful attention of every woman in the land, and should be especially enlarged upon in homes where there are children. The various possibilities of accident should be talked over, so that in case of emergencies the children will know instinctively what to do. In this way many precious moments may be saved, and perhaps even life itself.

Her subject was divided into two parts; the supreme emergencies, in which knowing how to do the right thing at the right time may save a life, and the less strenuous occasions which affect, in a more or less trying way, the every day life, and which are, after all, the great tests of character. Two rules of action were quoted which apply to both kinds of emergencies, which were summed up in the words, "Keep cool," and "Think."

In these days of multitudinous household magazines, it is not a difficult matter to find a solution for almost every possible question, large or small, that may come up in the home life. A scrap book in which these clippings can be placed will prove invaluable, if the clippings are carefully classified and indexed. The more important matters should be studied until every member of the family is familiar with them. There are countless minor questions which arise almost daily, and such a book would fill a much felt want in this connection.

One bright western woman writes that she has an improvement on the somewhat cumbersome scrap book, which she has adapted from the filing case system in use in offices. She has cut stiff paper into sheets which fit into a stout box, about five inches wide and four inches high, the length of the box being immaterial. She pastes her clippings on these sheets, and separates the different classes of material by means of pasteboard slips, cut the size of the sheets, with a projecting tab, similar to card indexes, on which she writes the general name of each division. In this way she can turn, at a glance, to whatever section she desires. Part of her box is devoted to classified recipes, one section contains laundry hints, and others have proved their worth in case of sudden

sickness, or accident. The idea is so practical and at the same time so simple, that it should be carried out in every household.

We take pleasure in presenting our readers with two beautiful winter scenes, taken on the Delavan Poultry Farm at Delavan, Wis. The first is a group of Pekin ducks and the second a flock of splendid Toulouse geese. We are indebted to Mr. F. E. R. Goetz, the proprietor of the Delavan Poultry Farm, for these excellent and interesting views. Many pleasing scenes of a similar nature

may be witnessed by visiting his poultry farms, where he is engaged in breeding all the popular varieties of pure bred poultry, including chickens, turkeys and guinea fowls. He will be glad to correspond with any one interested and may be reached by addressing Mr. F. E. R. Goetz, proprietor of the Delavan Poultry Farm, Delavan, Wis.

GARDENING TIME.

If you have not yet planned your flower and vegetable garden, there is still time. Spend your first free hour with a pencil and paper, laying out

little care, but those named above are enough to make a fine showing through the entire summer. One of the prettiest vines for covering old fences and dilapidated sheds is the variegated Japanese Hops, which is a rapid

grower, and has beautiful mottled green and white foliage. A large package of seeds can be bought for five cents. Everyone knows and likes the old fashioned morning glory, and the ornamental gourds make interesting as well as pretty climbers.

The vegetable garden must depend entirely on individual taste, but should be planted in such a way that there will be room for a succession of seeds, resulting in continued fresh vegetables throughout the summer. Few people realize the benefits to be obtained from a bed of old time herbs. Set

aside a little space this summer for roots of sage, summer savory, lavender, thyme, dill, coriander and parsley. It will prove its worth many times before the season is over.

A NEW OMELET.

Cup omelet is a little out of the usual run of omelets, and will be a favorite if once tried. Butter individual cups and fill lightly with soft bread crumbs, mixed with any cold meat chopped fine. Add plenty of seasoning, using sage, or other herbs

to taste. For six cups, beat three eggs, add a cup of milk and pour into the cups, using more milk if it is too quickly absorbed. Set the cups in a pan of hot water, and bake in the oven until hard in the center.

SOME GOOD DESSERTS.

Sago with Dried Fruits—When evaporated fruit is used in combination with sago or tapioca, it should be first thoroughly soaked, then slowly cooked in a double boiler in plenty of water until thoroughly tender. Skim out the fruit, and for each cupful of liquid add one tablespoonful of fine tapioca and a pinch of salt. Cook until the tapioca is transparent and very tender; then sweeten to taste and pour it over the fruit, arranged in serving dish. This desert should be thoroughly chilled before serving, and is usually accompanied by a pitcher of cream.

Prune Tapioca—Soak twelve large prunes in three cups of water for a day. Drain from water, slip out stones and cut the prunes in halves. To the water add one half cup minute tapioca. Place on stove and cook until clear, add scant half cup of sugar and juice of one-quarter lemon. Remove from fire, and add prunes and mould. To be eaten cold with cream, either plain or whipped.

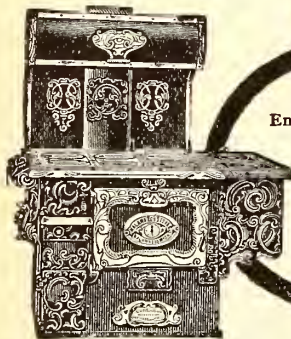

Cinnamon Turnovers—Roll out rich puff paste, a quarter of an inch thick, and cut it with a sharp knife into neat squares; place in a mixing bowl a quarter of a pound of butter, a small cupful of powdered sugar and a few drops of lemon juice, blending with a wooden spoon until soft and creamy; then add a heaping tablespoonful of ground cinnamon. Arrange directly in the center of each square a tablespoonful of cinnamon cream, wet the edge slightly and turn the paste over in triangle shape, crimping the edges. Place the turnovers in rows in a shallow baking pan, brush over with white of egg, sprinkle with sugar and bake in quick oven.

Raisin Fritters—Here is a dainty for the little folks which is always hailed with delight, and gives as much pleasure as those delicacies which their more wealthy companions enjoy. Into four teacupfuls of flour scatter a teacup of raisins; moisten with half pint of milk, and two beaten eggs—the whites beaten separately. Mix well, and drop a tablespoonful at a time into boiling lard. They will set crisp at once, and should be drained before the fire, piled high on a plate, and sprinkled with fine white sugar.

Fruit Snow—Drain the syrup from a quart of canned fruit, bring it to a boil and add two level tablespoons of cornstarch, then beat in the pulp of the fruit, and lastly the well beaten whites of two eggs. Pour into a mold, cool and serve with whipped cream. It is even more delicate if half the whipped cream is folded in before serving. And fruit can be used.

EXPERIENCE DEPARTMENT.

Mrs. Mary Smith of Roswell, N. Mex., writes: "I want to add my bit to the Experience page, from which I have in turn received many helpful hints. One of the things which seems simple, and yet has its difficulties, is dish washing. I have found that if I

Lest You Forget--We Say It Yet Do You Know The Potter System

of selecting laying hens—the greatest discovery of the century in the poultry world? It is a simple, natural and scientific method of picking out the layers from the loafers. You keep only layers in your flock when you use the Potter System. Figure out in dollars and cents your saving and added profit. Our system is used and recommended by prominent judges, editors and thousands of breeders. Write us today and learn what they say about it, and a dozen ways of making more money on your poultry. You can keep fewer hens, get more eggs and make more money if you know the Potter System.

DON'T BUILD THAT NEW HEN HOUSE

or think of fixing up the old one until you have seen our large new 64-page catalog on Poultry House Fixtures. The biggest and best ever issued; over 50 illustrations showing hen-house fixtures in three styles and 12 sizes. Also "Simplex" trap nests; W. P. attachment, etc. No poultryman can afford to be without this book. For eight years we have manufactured this line of goods. Thousands of poultry houses in every section of the country are equipped with the Potter Fixtures. You can have convenient and sanitary quarters and you can save time, worry and money by using them. Our Catalog tells you how to keep free forever from those pests, LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for one red stamp, to cover postage. Write us today for free circular on the POTTER SYSTEM and our new catalog. They will please and interest you.

T. F. POTTER & COMPANY
Box A - - Downers Grove, Illinois

use a little ammonia in the water in which glass is washed, it will make it sparkle like cut glass. Of course I never put hot water on tumblers which have held milk until I have given them a good rinsing in cold water. The cloudy look of tumblers is often caused by lack of this knowledge. A small amount of milk added to the water in which silver it washed will help to keep it bright, and there is no better way to restore the original shine to discolored silver than to plunge it into sour milk and leave it there for several hours. When cleaning steel knives, mix a small quantity of baking soda with the scouring brick and they will be more easily polished. Some of the preparations which are now sold at all grocery stores are just as good for scouring as the old fashioned scouring brick, and can also be used so easily for scouring sinks, bath tubs, pots and pans that there is no longer any excuse for the thick, black coating on the bottoms of kettles. My last hint is this: If there is too much bluing in your rinsing water on wash day, put in a little household ammonia."

Mrs. A. J. Berry of Bayonne, N. J., writes: "There is always a time in the early spring when oranges are so cheap that they are within the reach of everyone. We consider them especially wholesome, and like to cook them in a variety of ways. The children think that mother's orange tarts are delicious. I make them by beating together three quarters of a cupful of sugar, a tablespoonful of butter, the juice of two oranges, and the grated peel of one. Stir in a teaspoonful of cornstarch, wet with the juice of half a lemon, beat thoroughly, and bake in patty pans lined with a rich pie dough or puff paste. Oranges cut in small pieces and placed in a pretty glass dish, and covered with a custard made by cooking together a pint of milk, the well beaten yolks of three eggs, a little cornstarch, a pinch of salt, and sugar to taste, afterward pouring the hot mixture over the stiffly beaten whites of the eggs, adding flavoring and allowing it to get very cold, makes a dish fit to set before a king. Orange tapioca is good. Boil together pint of water and halfcup of 'minute tapioca,' which cooks in half the time required for the old kind. Pour over sliced and quartered oranges, sweeten to taste and serve with cream and sugar. Orange pie is one of our specialties. Make a custard by beating the yolks of three eggs with a cup of sugar, add a teaspoonful of butter, the pulp and juice of two oranges, the grated rind of half an orange and a cup of milk. Bake in a deep pie dish lined with pie dough, and when done, cover with a meringue made by beating the whites of three eggs and three tablespoons of sugar."

Mrs. C. L. P., Racine, Wis., gives the following excellent recipes: For a breakfast variation mix graham flour in boiling water, just as you would oatmeal, and after salting it, cook it thoroughly. It is as good as any of the new cereals, and is so simply prepared that it is a favorite with me. Another nice breakfast dish can be made while getting dinner the day before. Boil a pint of milk, add two tablespoonfuls of cornstarch mixed to a smooth paste with a little cold milk, one well beaten egg, and a pinch of salt. Let the other ingredients

boil up before adding the egg, but do not let the mixture boil after that is in. Pour it into a wet mould, a square tin being the best. When cold, cut in slices, roll in flour and fry. This is delicious with maple syrup. We are very fond of a quickly and easily prepared dessert, which is made by stirring into the left-over cream of wheat half a cup of sugar, and enough cocoa to make it quite strongly flavored. Pour this into either a fancy mould

or separate cups, to harden, and serve cold with cream. It is still better if you add dates, raisins or figs, cut in strips, and we sometimes stir in half a cup of nut meats, for variety.

IN THE KITCHEN.

Grease the upper inside edge of the pan in which chocolate is being made and it will not boil over.

Cockerel in my display pen at Madison Square Garden, N. Y., and Boston, declared by the leading judges to be the finest they had ever seen.

At Madison Sq. Garden, N. Y.

1905, 1906, 1907, and Boston, 1906 and 1907, birds I bred and raised won nine 1sts, three 2ds, two 3ds, four 4ths, one 5th and one 6th. A record equaled by no other breeder.

JNO. L. DAKIN

Roxbury, Mass

in a cloth wrung from hot water and keep in a cool place.

When wiping china dishes do not pile them together while hot. This has a tendency to crack the glaze.

A good cover for irons when being heated on a gas or gasoline stove is an old tea kettle with the bottom cut out.

Dishes which have become brown and burnt from baking in the oven may be easily cleaned after they have stood awhile in borax water.

Add a few drops of lemon juice to eggs while being scrambled. It will improve the taste.

A little sugar added to the water used in basting roast improves its flavor.

The odor and taste of onion can be removed from silver by rubbing it with a slice of lemon.

A few grains of rice put in the salt cellar will keep the salt moving when being shaken and avoid its caking.

Setting dishes in the oven to warm often results in their cracking. Warm them by pouring hot water over them and there will be less chance of breakage.

Eggs are more nourishing when cooked by being covered with boiling water and allowed to stand for five minutes than when boiled for three minutes.

Coffee grounds kept in the sink strainer will catch grease and thus prevent clogging of the pipes if all greasy water is poured through the strainer.

IMPROVING THE BREED.

A very important element in poultry raising is to select one breed or two at the most and then endeavor to improve the breed each year. But the question the amateur asks is, "What breed shall I select?" To my experience, however, it is not the all important question. The question should be: "What breed can I study to make more perfect each succeeding year?" Some amateurs, I think, make the mistake of imagining that they must secure some breed that was never seen or heard of in the community. They affirm that they will have a better opportunity of selling eggs and poultry at fancy prices. But to my knowledge this is a wrong way of thinking. To succeed in poultry raising improve your stock should be the motto of every fancier. But some one says: "Everybody keeps Plymouth Rocks." We will admit that the Rock is a favorite and universally recognized as a standard among poultry. Nevertheless there are very few flocks on the farms or in the community that could be classed as strictly high bred and up to the standard. Therefore I would say that if your fancy turns to the Plymouth Rock start in with that well known breed which has merited the high place that they hold among poultry.

However, the object of this paper was to speak of the merits of the White Leghorn as a suitable fowl for the amateur, for the farmer or for the fancier. As a breed they are exceedingly useful on the farm as they desire to rove and wander when the opportunity is permitted. There are some farmers who only keep the White Leghorn fowl, high bred and pure bred, and they pay well, yet the Leghorn can be kept in confinement in the village and will do exceedingly well if cared for properly.

They will prosper and thrive in a

HAZELMERE POULTRY YARDS Knightsville, Cranston, R. I.**WHITE P. ROCKS @ M. B. TURKEYS**

Have been breeding the above two breeds since 1899. I have mated up ten yards of White Rocks for my egg trade, and they are by far the best that I have ever owned. Eggs from all of these yards \$2.50 per 15, \$5 per 35, \$12 per 100. If selected from two very best yards \$4 per 15. Incubator eggs from large white stock, \$6 per 100, \$50 per 1000. Turkey eggs from well marked hens weighing up to 24 lbs., and mated to 40 lb. toms, \$4 per 11. You can buy higher priced eggs than mine, but you cannot buy eggs that will produce you any better results. 200 White Rocks and 50 turkeys yet for sale. Egg circular free for the asking.

J. T. THOMPSON,

Box 10, Hope, Ind.

small yard or park. While not naturally so tame as other and larger breeds, yet they will become very tame, gentle and docile if treated properly. Give them a chance to scratch in the soil; see that they have an abundance of fresh water once or twice a day.

The White Leghorn seems to be an intelligent, active, busy bird and an indefatigable layer of good-sized white eggs. They are a handsome bird and taken in a flock of fifteen to twenty. I know of no other superior for beauty of carriage and plumage. I have been astonished at the large number of eggs I gather day after day from a small flock of Leghorns. Receiving twenty and twenty-one eggs from a flock of twenty-five pullets many times, and keeping track of feed each month, they more than double the price of their feed, valuing their eggs at market prices only.

The White Leghorn matures early also for one who desires to raise broilers for market, and when young are tender and delicious.

The White Leghorn hen is a good brooder and cares for the chicks, rearing her flock with due consideration. It is better to keep the mother hen in confinement while the chickens are young as she may wander away too far from home.

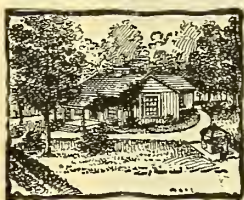

The White Leghorn eggs are very easy to hatch in the incubator as every one knows who has made the experiment. Therefore, all things considered, the White Leghorn fowl has many noble qualities and characteristics which no other breed contains.

Louis A. Pierson.

Buff Wyandottes

Eggs and Stock. Ten years experience with this variety.

W. R. WOODEN, Battle Creek, Mich

Among the leaders of up to date poultry journalism, guiding the thought from an early time to the present, instructing and imparting knowledge of advanced ideas for the ever betterment of this great industry, none have been more helpful than this American Poultry Journal.

Among the new departures for the easier and more complete control of poultry and pigeons is color banding. The banding of poultry and pigeons with colored bands is really an innovation of such practical worth the wonder is that it has not been thought of and worked out before. While the colored bands have not been very extensively advertised they are now in use by many breeders in every section of the country. The ability to identify a bird at quite a distance by the color of its band results in a great saving of time and labor. These bands are made from a material similar in appearance to celluloid, but in some essential features better, in a large variety of colors and combinations, reinforced with metal, which protects the colored material and makes a band of sufficient strength to withstand the wear and tear of use. There are various methods of using, each breeder generally adopting a way that will best meet his individual requirements, but, of course, the main object is to be able to identify the birds for any purpose desired without the trouble of catching them.

Breeders of the Leghorns with their nervous temperament will fully appreciate this. There are times, and often, when for various reasons a breeder of any variety will esteem this way of identification. By banding each pen of fowls with a different color or combination of colors if they get mixed in any way they are easily noticed. In keeping track of different strains of fowls they are very valuable, also in line breeding they have their special use. Often a band of different colors on each leg of the fowl is of advantage, one to indicate its age and the other the strain or any other purpose desired. Breeders of pigeons, especially those raising squabs for market, find in the colored band the only means by which they can identify every bird in each and every pen at sight regardless of numbers.

The usual method of banding squab breeding pigeons is to band each nest mated pair alike, cock on right leg and hen on the left; band the birds in pairs alike, but have no two pairs wear the same combination of colors in the same pen. Records are kept by the colors and all detailed memoranda made same as with plain aluminum bands, this being possible by the large number of different combination of colors used in the making of the bands.

Beverly, Mass.

Arthur P. Spiller.

MISTAKES.

Yes, our lives are full of mistakes; but we all learn more from our mistakes than from our successes. Thirty years ago, when "me and my John" went to housekeeping, we thought we would show our neighbors a few things about poultry raising; we sold off all of our common stock of chickens and intended to buy some fine blooded stock, when, to our surprise, we found that no one in our part of the country had high-grade stock for sale. The next best, and the only thing for us to do, was to get back some of the same mixed sorts we had turned

down. We could raise a few more chickens every year than we needed to consume on the farm, but for several years we did not get many eggs to sell.

We were all the time trying to get new stock, and we had quite a medley of the different breeds. We built a stone house for our chickens, something like a bank barn, three sides stone and the southeast side boxing; this is the first or basement story; the upper story is pine boxing and a good roof. All the nests are in the upper story, which is entered from the upper side of the hill. The excavation was about four feet, striking a limestone floor, and then filled in on the northwest, making an easy entrance to nest room, also turning the water away from the wall. After struggling along in a half-hearted way for several years we heard of the Black Langshan chickens and decided to get

Money in Poultry.

Those interested in poultry and incubators will find it to their advantage to obtain Foy's new book "Money in Poultry," advertised elsewhere in this issue. It is one of the finest and most valuable books ever published. It is finely illustrated and contains a very large amount of practical information about the poultry business in general and is valuable as a reference book, telling the beginner how to start on a small or large scale, and how the largest pure bred poultry business in the world has been built up from a small beginning. Tells how to start right; how to make money raising fowls on the farm; how to line breed; how to win at shows; how to prevent and cure diseases; how to run an incubator and manage a brooder. This is the most valuable book for the beginner in poultry raising ever published. Revised and enlarged edition just issued. This book will be mailed for 4c, by addressing Frank Foy, Box B, Des Moines, Iowa.

some of them, but we did not venture to sell off our old stock as before, but bought a cockerel and half-dozen young hens and commenced to breed for the Black Langshan pure. In about three

me to keep any, but have taken great pleasure in reading in the American Poultry Journal what others have done. This fall I determined to get a few chickens and if I found it impossi-

placed a window, half glass and half muslin. I would say, however, that with the exception of three days the whole bottom or end of box stood open daily throughout the winter. On the 11th of November I procured nine White Wyandottes—three yearling hens, five pullets and a cockerel, hatched the 30th of May. The farmer from whom I got them was at the time getting one and two eggs a day from a flock of seventy hens. My hens commenced to lay the latter part of November, the pullets the second week in December, in which month I got 116 eggs, in January 172 and February 117. They are at present laying as heavy as in January. These are the first chickens I ever kept, and I attribute my success to the knowledge I have acquired through the columns of this paper.

C. W. Crawford.

A NEW POULTRY BOOK.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

We want everyone to read this book, therefore we are offering it at the

CUT PRICE OF 25c.

Congress Park Poultry Yards,
Congress Park, Ill.

A brood of pedigreed White Plymouth Rock chicks. Bred by Victor D. Caneday, Box A, Taylors Falls, Minn.

years we had weeded out nearly all of the mixed flock and had a goodly number of fine black chickens, of which we were very proud. We have been raising the Black Langshans about fifteen years and have never tired of our glossy black birds. Since beginning to raise them we have never been without eggs, and most of the time lots of them; they are the best winter layers we have ever kept. Now we have learned to depend on the eggs for all our groceries and many other things, too. I have sold a good many eggs to neighbors for setting, but few have raised them exclusively. I have never used an incubator, except a home-made one. I did not like it; it was a hot-water machine. We raise the Bronze turkeys, and I find in them a nice supply of pin money.

Mrs. S. J. Hughes.

Willard, Mo.

American Poultry Journal:

Living where space is very limited, although a lover of fine poultry, I have always felt that it was impossible for

Will You Raise Them Or Bury Them?

Why let that common disease—Gapes—take its usual percentage of your profit when it can be so easily prevented, or cured, if taken in time?

CONKEY'S GAPE REMEDY

is a wise investment for the poultry raiser. Have it on hand, give it at the start and you need not lose a chick. Gape worms locate in the wind-pipe and ordinary remedies fail to touch the spot. We return your money should it fail to satisfy you. If your dealer does not have it, 50c will bring it postpaid.

Send 4c in stamps and names of two others for book on poultry no poultryman should be without.

ble to keep them, could at least eat them. Hoping that my experience may be of some interest if not of use to others in my position, I will, with the Editor's consent, give it. I procured a piano box, covered the top and sides with tarred paper and in the bottom

First Columbian Wyandotte hen at Boston, 1907. Special for best hen; special for best head; special for best color and shape; special for best wing—nine ribbons in all. Bred and owned by Hazelmere Poultry Yards, Knightsville, Cranston, R. I.

WYANDOTTE WHITE OIL.

There are no doubt a great many of our readers who do not know what Wyandotte White Oil is. If they did we feel sure they would no longer use the ordinary kerosene oil in their incubator and brooder lamps, and also in their homes. The Wyandotte Production and Refining Company, Cleveland, Ohio, have a large number of testimonials from such breeders as J. C. Fishel & Son, Hope, Ind.; Sure Hatch Incubator Company, Indianapolis, Ind.; Ira C. Keller, Prospect, Ohio; U. R. Fishel, Hope, Ind., and many other breeders of prominence, who have used this oil, and proclaim it to be the best they have ever used. Better send to them today for full particulars and mention American Poultry Journal.

HOW TO KEEP EGGS FRESH.

There is no poultryman or farmer living but what could make more out of his eggs if he had a good egg preserver. Good eggs always bring good money, but there are times when they bring a good deal better money. The only trouble is to preserve eggs strictly fresh until that time comes.

The secret of preserving eggs as worked out by the Willett Company is the very best, simplest and cheapest method known, and is doing much for all of its users. It costs but a trifle to preserve eggs by the Willett formula, and they can be kept for almost an indefinite period. Willett's Water Glass Preserver accomplishes exactly the two things required of an egg preserver, namely, preserving eggs really fresh and with a fresh laid appearance. Immense quantities were sold last year, and it gave perfect satisfaction everywhere. It is highly recommended by the United States and German governments, and it

is also guaranteed, if used as directed. Willett's Water Glass Egg Preserver is for sale by most of the reliable dealers, and is regularly advertised in this magazine. If your dealer cannot supply you, write direct for particulars and prices. Willett's Water Glass Egg Preserver Co., box 56, Anderson, Ind.

Dr. Bennett claims that the Barred Plymouth Rock cock shown in this issue is without question the champion Barred Plymouth Rock male of the world, and gives as his reasons the fact that he not only won first cockerel, best colored and championship male at Chicago, 1906, and first and special cock, 1907, but that he sired the first cockerel, best colored and championship male at Chicago, 1907. This is a record he believes has never been equaled by any Barred Rock male in the world. Dr. Bennett & Co.'s complete winnings were 1-3 cock, 1-5 hen, 1-4 cockerel, 2-4 pullet, 1-3 pen, championship male, championship female, best colored male and female, best display, best two males, best two females, best two males and two females, the American Plymouth Rock Club national cup, two other silver cups and fourteen specials.

John L. Dakin, Roxbury, Mass., who has furnished many winners for the Boston and New York shows, states that he will sell only two settings of his White Wyandotte eggs to one customer. The pen of birds he had on exhibition at New York and Boston were the talk of the shows. He was offered a large sum for this pen, which was promptly refused.

Harmon Bradshaw, Lebanon, Ind., the well-known Single Comb White Leghorn breeder, has five grand pens of his noted prize winners and is prepared to fill orders for eggs on short notice. Send for a copy of his 1907 mating list, which gives prices and particulars about these pens. Mention American Poultry Journal.

Robert Larmer, Ravenwood, Mo., the Buff Plymouth Rock specialist, has just issued a very neat four-page mating list which he is desirous of placing in the

hands of all those interested in Buff Plymouth Rocks. Send for one today; it's free for the asking. Mention American Poultry Journal.

Dr. O. P. Bennett, Washington, Ill., breeder of Barred Plymouth Rocks and Scotch Collie dogs, has issued a neat circular, which should be in the hands of every fancier. Dr. Bennett is the owner of the mother of J. Pierpont Morgan's famous \$5,000 dog, Piccolo, also a full brother of the latter.

E. L. Delventhal, Warrenton, Mo., has bought the entire stock of Buff Plymouth Rocks of B. Johnson, Kirkwood, Mo. This makes Mr. Delventhal one of the foremost breeders of Buff Plymouth Rocks in the world.

T. E. Applegate, Spicard, Mo., breeder of S. C. and R. C. Brown Leghorns, has several fine pens mated up for the egg trade. Mr. Applegate makes a specialty of breeding for exhibition.

John A. Flick, Ravenna, Ohio, is one of the foremost breeders of Columbian Wyandottes. Send for his egg circular. His Chicago and Cleveland winners are in his pens.

Bridgman & York, Forest City, Mo., breeders of White Wyandottes, have issued a neat circular describing their winnings and matings. Send for one.

Send for a bag of the old reliable Chamberlain's Chick Feed.

Our Claims Confirmed

The 1907 Prairie State Incubator is more than making good our claims. It has even exceeded our own expectations in the hands of its users. And that's the test of all tests. That's what determines the value of an incubator. It's how well it meets the purchasers requirements that counts.

The 1907 Prairie State will be found equal to the highest anticipations of its purchasers. It will even surprise you with the unusually large, strong, vigorous chicks it brings out. Early in the winter we sent a large number of these incubators to the principal Experimental Stations north, south, east and west. We wanted them put to the severest tests and knew that at these

Stations nothing but an impartial, honest report would be given. In every case they have given excellent results. The reports are particularly good on size of chicks, vitality and low percentage of fatality, being far better in each respect than any other machines used. They also bring off the greatest number of chicks.

In buying an incubator it is to your interest to get the machine that will produce the greatest number of chicks—the largest chicks and the kind that are hatched strong enough to insure that they will live. You'll not be disappointed if you get the 1907 Prairie State. Send for catalog and learn why it hatches the kind of chicks that pay.

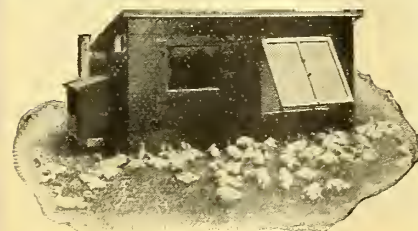

BROODERS that RAISE the MOST CHICKS

The right brooder is just as important as the right hatcher. Too much care cannot be given to the selection of the brooder you buy, because so much depends upon the chicks you raise as to the success of your undertaking. There are many decided reasons why the Prairie State Colony House Brooders for out-door use will raise the highest percentage of chicks. They afford the greatest adaptation to the varying physical natures of a brood of chicks. They are roomy, well ventilated, dry, easily regulated, have over-head heat and can be run successfully in the coldest

weather. The open front adapts it to summer use with or without shade and chicks are protected from rain and storms at all times.

The Lamp Will Not Blow Out

The lamp being specially protected with a lamp box cannot blow out and the arrangement makes it particularly convenient to get at for filling, trimming, etc. These Brooders are made in three sizes and meet the need of the large or small poultryman better than any other made. Last year a great many bought these brooders single, but this year they are re-ordering in lots of 50 at a time. That proves their practical and satisfaction-giving qualities. Send for our Brooder Catalog today.

We give with each brooder our book, "Artificial Rearing of Chicks" which covers every point of artificial rearing.

Lambert's Poultry Farm, Apopka, R. I.

HOW A BIRD'S NEST SUGGESTED A GREAT INVENTION.

Sometimes it's a very trivial thing that suggests the thought which germinates and grows into a reality that shall benefit mankind beyond measure.

The story of how a bird hatching her brood suggested the thought and theory that finally developed into the New Method Incubator makes a very interesting story. It is more than merely interesting; it is instructive—full of facts gathered from nature and her method of hatching, as demonstrated in the bird's nest in the bough of a tree near the window of an observing man.

This interesting story, which every poultry raiser will want to read, is published in the handsome new catalogue recently issued by the New Method Incubator Company, Morrow, Ohio, who will be glad to send a copy free to all those interested in incubators who will write for it.

Besides the story of the bird's nest the book describes how the new method has been applied to an incubator, describes the machine and shows why it is nearer nature's way of hatching than was ever accomplished before. Send for the book and kindly mention this paper when you write.

The Bent-Croissant Company, of Antwerp, N. Y., now announce that they are prepared to furnish Bent's Milk Albumen in two grades, No. 1 containing 43 per cent protein and No. 2 containing 90 per cent protein. The former is made from whey and the latter direct from skim milk, containing the same elements in different proportions, No. 2 being practically clear protein, with 6 per cent fat. It is the richest and most concentrated protein food known, and neither grade causes bowel looseness, and both are especially adapted to chicks. Two pounds No. 2 equal five pounds No. 1 in feeding value, being sufficient for 100 hens per day. While necessarily costing more, it is really cheaper than the original product. Poultry keepers would do well to write for particulars and special trial offer.

The Springtime issue of The Separator News, the big semi-annual publication of The Sharples Separator Company, West Chester, Pa., is now being sent to readers.

The News consists of six pages, standard newspaper size, illustrated in colors, and is packed full of facts and information about tubular separators and the dairy business—a big feature being the testimony of tubular users.

The News circulation for the present issue is 600,000 copies, sent all over the United States wherever dairymen live, and the mailing out of which keeps a big force of people busily engaged for a month. A postal request addressed to The Sharples Separator Company, West Chester, Pa., will bring The News to the homes of those interested within the United States. Free.

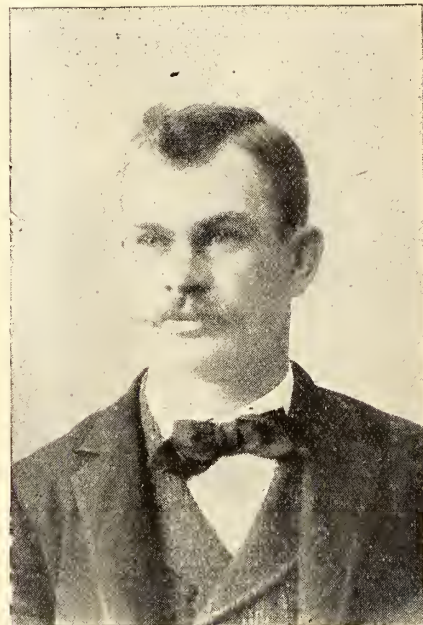

Send to Glendale Poultry Farm, Old Orchard, Mo., for a setting of White Wyandotte eggs.

Send to Mrs. W. S. Robison, Fayette, Mo., for a setting of Buff Plymouth Rock eggs.

A PROMINENT POULTRY MAN.

Mr. F. W. Niesman, whose portrait we show herewith, is one of the most prominent poultry men in the vicinity of Freeport, Ill. He is at present the proprietor of the Great Central Poultry Farm.

For many years Mr. Niesman has made a specialty of poultry breeding. He was for some time previous to embarking in business for himself connected with Mr. J. W. Miller, another of Freeport's prominent poultry men. Mr. Niesman has had an experience reaching over a period of over twenty-five years, and the stock of the Great Central Poultry Farm includes more than half a hundred varieties of fowls, embracing not only the more

popular breeds, but also many of the rarer breeds known more especially to fanciers.

Mr. Niesman devotes his entire time and energies to the breeding of poultry and supplying the wants of his customers in that line. Particular attention is paid to quality and breeding, and a visit to the Great Central Poultry Farm reveals the fact that the stock is well housed, carefully handled and free from disease. An evidence of the excellence of his birds is shown by the fact that in eight weeks' time birds from his flocks won 3,000 prizes.

Mr. Niesman's policy in the conduct of his business has always been to render any assistance possible to his patrons. All inquiries in regard to the care and management of poultry are promptly answered and any needed information is cheerfully given. Prompt service, careful shipments and square dealing are the motto of this concern. When writing address F. W. Niesman, proprietor Great Central Poultry Farm, Freeport, Ill.

TRENTON INCUBATOR CO., TRENTON, N. J.

(SUCCESSORS TO THE PERPETUAL HEN CO.)

Manufacturers
of the

NATURAL INCUBATORS & BROODERS

The best machine made because nearest to nature. Made of paper—best non-conductor of heat and cold. Lighter than wood, fully as strong and far more durable. Will not warp or shrink—no seams to open. Not subject to climatic changes, tons of fresh air. Natural air conditions. Having natural air conditions overcomes the moisture troubles and no artificial moisture is required. The NATURAL will produce the strongest, healthiest and most vigorous chicks possible.

The NATURAL BROODER, constructed on the same principles, will raise the chicks. No fumes or gases in hover room, and air conditions are right. Hover is so constructed that crowding is impossible. Chicks get the warmth from the top, the same as under the hen; no floor heat to cause leg weakness.

COMBINATION BROODER AND COLONY HOUSE. Chicks are put in this house from incubator, and need not be moved until put in their laying and winter quarters; it can be used as a laying house as well if required. This overcomes the trouble of teaching young chicks to a new house, which is often troublesome. The brooder house is transposed into a colony house by removing inside fixtures only.

Prices cheapest, consistent with excellency of product. Machines are result of twenty-five years' practical experience. **WRITE FOR CATALOGUE AND PRICES.** Information free on all poultry matters. Address

R. N. OLIPHANT, General Manager

::

12 Escher St., TRENTON, N. J.

**SUNCREST POULTRY FARM—
HOME OF RUSH'S S. C. W.
LEGHORNS.**

A plant devoted exclusively to the production of high class S. C. W. Leghorns. Situated on the Holland interurban car line, but a few minutes' ride from the city of Grand Rapids, Michigan, it has an ideal location. The home place consists of ten acres, devoted entirely to the poultry, with the exception of the small portion occupied by Mr. Kramer's beautiful country home.

Mr. Kramer has put many years of practical experience into the building of this plant, and by joining forces with Mr. Rush, under the firm name of Rush & Kramer, it gives them, without doubt, the largest and finest exclusive fancy S. C. W. Leghorn plant in the West.

Rush's White Leghorns are well and favorably known, years of careful line breeding having developed a strain of superior excellence. They have been heavy winners, both in his and customers' hands, in the largest shows, including Chicago National and Detroit.

They excel in size, type, station, plumage and detail points that mark the bird of choice breeding. That the best specimens are the best layers is now a well established fact. Nothing establishes and fixes the laying habit from one generation to another as quickly as careful line breeding. As we permanently fix in our strain the shape and breed characteristic of our ideal (standard of perfection), so do we stamp the laying habit throughout the flock.

Owing to extensive additions to the plant Rush & Kramer did not show this year, deciding it the better policy to give all birds a good rest, thus having them in fine fettle for their extensive egg trade.

Ten superb breeding pens are now mated for this trade, every one of which is mated for exhibition quality, and all contain birds that have "delivered the goods" at New York, Boston, Chicago, Detroit and Grand Rapids.

Visitors always welcome. A cordial invitation to inspect the quality in these yards is extended to all interested.

TRUTH IN INCUBATOR ADVERTISING.

Poultry raisers will do well not to take too seriously all the claims made in incubator advertisements. Such statements as "it gives absolutely perfect results," "needs no attention whatever," "always gives 100 hatchings," etc., are hardly warranted in any case.

The poultry business is like any other legitimate calling. Conducted rightly it yields profitable returns. But it requires some time and attention and only reasonable things must be expected.

The Racine Hatcher Company, Racine, Wis., have the good fortune to have a thorough poultry man who observes, and experiments, and improves, and has been doing these things month after month for upward of twenty-five years. His work has served a great purpose. All his efforts and his discoveries have gone into the favored Racine Incubator.

This man has written an incubator book not given to exaggeration. It deals with actual experiences, from his first incubator made in 1881 down to the present. It gives all the facts any poultry man cares to know, it deals with all machines, and gives facts instead of theories. It is an excellent book to get the truth from without undue coloring. A

copy may be had free by writing the Racine Hatcher Company at the address as given in their advertisement in this paper.

A very interesting mating list is that of Wm. Miller, Crescent, Mo. It is he who bought the best seven Plymouth Rocks in the country for \$1,750. The writer has seen Mr. Miller's breeding yards. They actually show breeding and the matings are perfect. One of his pens headed by Prince of Indiana, the famous \$800 cockerel, is mated to eight pullets larger than

sent free to the readers of the American Poultry Journal. We guarantee Mr. Miller.

B. S. Hume, French Village, Ill., breeder of White Wyandottes, is doing a flourishing business in eggs, having sold \$170 worth to one person. This shows that the quality of his stock is all he claims for it. Mr. Hume is absolutely reliable in his business dealings. Send for catalogue.

Peter S. Hurt, Thorntown, Ind., the Single Comb Buff Leghorn breeder, has just issued a 4-page mating list, which gives

WHITE PLYMOUTH ROCK COCK.

Winner of first championship and color special at Madison Square Garden, 1907. Bred and owned by Greystone Poultry Farm, Yonkers, N. Y.

the largest and absolutely white. It is a pleasure to handle these birds, neat, low comb, good bay eyes, yellow legs and the best of Rock shape. Mr. Miller is very careful in his matings. There is no guesswork at all. In some pens you will find only one female, in others four and six. All in all, there is system. If you are in the market for eggs or stock do not fail to get Mr. Miller's mating list, which will be

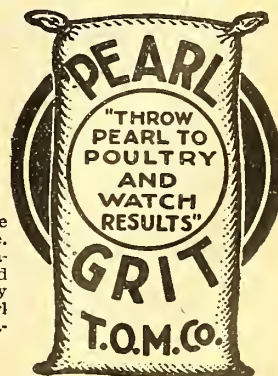

his matings for this season and the prices he is selling eggs for. Don't fail to send for this circular if you are interested in this variety. Mention American Poultry Journal when you write Mr. Hurt.

Send to Joe Coleman, Belleville, Ohio, for a setting of Black Orpington eggs. Mr. Coleman is secretary of the Black Orpington Club.

Pearl Grit
Saves You One-Half

Remember this the next time you buy grit and it will pay you when you figure up costs and profits. You get double value when you buy Pearl Grit. It's a grinder and it's a shell builder. No other shell making material is required when you feed Pearl Grit. We grind it in suitable sizes for little chicks and adult fowls. It makes the little fellows thrifty and the older ones vigorous and productive. We guarantee it to absolutely take the place of shells and grit combined and it has been proved by chemical analysis that it contains the elements needed for egg-making, growth of plumage and strengthening of muscle, bone and sinew. It retains its grinding properties down to the smallest particle. Its chemical properties are assimilated by the bird's system and supply nourishment for the body. If you want strong, vigorous, prolific fowls, "Throw Pearl to Poultry and Watch Results." Write for prices and our free booklet, "True Grit." It is full of valuable information and explains the importance of good grit. Write to day.

THE OHIO MARBLE CO., Box 209, North Wayne St., Piqua, Ohio.

THE WELD "PITTSBURGH PERFECT" THAT HELD

POULTRY AND GARDEN FENCE

The only absolutely perfect Poultry Fence—Because

- 1.—Extra Heavy top and bottom Galvanized Wires.
- 2.—Heavy Galvanized intermediate Wires.
- 3.—No smaller wire in stays than in intermediate line wires.
- 4.—Square meshes—meshes very small below, where needed.
- 5.—Stays and strands electrically welded—no separation.
- 6.—Ample provision for expansion and contraction.
- 7.—Stretches up perfectly even all over.
- 8.—Stays tight in summer.
- 9.—Adjusts itself perfectly to uneven ground.
- 10.—Not a flimsy hexagon netting, which is dear at any price.
- 11.—No top or bottom board required.
- 12.—Meshes fine enough to turn all poultry, wires heavy enough for stock.
- 13.—No wraps to hold moisture and cause rust.
- 14.—Stay wires, on account of electric weld, cannot be spread.
- 15.—Low in price.

Made in five heights, viz: 25, 35, 46, 52, & 58 inches

Made in two weights out of Heavily Galvanized Wire, as follows:

REGULAR—Top and Bottom Wire No. 10—All other wires No. 13.

HEAVY—Top and Bottom Wire No. 9—All other wires No. 12.

Electric Welded Fences for All Purposes are made by

PITTSBURGH STEEL CO., Pittsburgh, Pa.

Write for booklet and your dealer's name

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

THOS. F. RIGG, IOWA FALLS, IOWA

\$8 SPECIAL \$8

Twenty Thoroughbred Chicks and an All-Metal Hatcher or Brooder.

The machines are made entirely of metal and are strictly fire-proof. They are the only machines of the kind on the market. Each machine is equipped with a Hydro safety lamp and a double wafer self-regulator, which makes

hatching or brooding easy with a Cycle machine. They are next to the old hen and will hatch more chicks than any other incubator on the market. In order to introduce the Cycle Hatchers and Brooders I am giving 20 thoroughbred chicks, hatched in a Cycle machine and a Cycle Hatcher or Brooder for the small sum of \$8. Order at once. Catalogs free. The Cycle Hatchery, 879 N. Leavitt St., Chicago

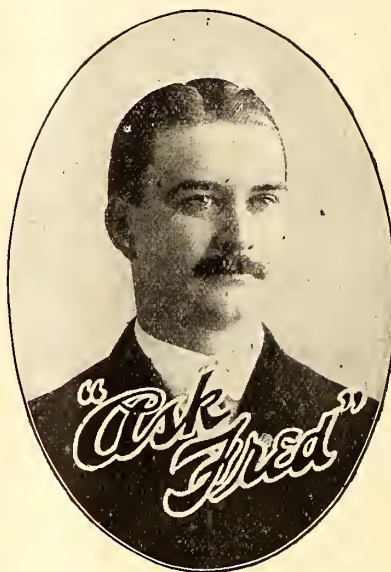

CHAMBERLAIN'S PERFECT CHICK FEED.

The World's Chick Feed of Today—
The Only Original Dry Chick Feed.

It breathes a pure and superior atmosphere of its own and claims no relationship with any of the so-called chick feeds on the market. The reason that sales of Chamberlain's Perfect Chick Feed grow year by year, while the price is higher than other chick feeds on the market, is because it is better. You get full value received for every ounce. You might just as well try to make a stream run up hill as to expect cheap chick feed to give you the same results as Chamberlain's Perfect Chick Feed, which has been used by the most successful poultrymen, and in increasing quantities, so many years. Good goods command good prices; this is true of everything that is sold. Poor and cheap feed means poor and unhealthy chicks; good feed means healthy and vigorous chicks.

Are you among those who wonder why their progress and gain is not as great as it might be? Why not stop and investigate the cause. Get to the bottom of it and then don't be satisfied with having found the error, but remedy it at once. In other words, begin to go forward instead of standing still. No matter how

great your success to date you cannot stop improving and expect to continue succeeding. How many experienced breeders, many noted for their ability to solve wonderful commercial problems, leave a small but very important one in the poultry business unsolved; or, worse still, find something they think answers the purpose and leave it at that. In view of the above we desire to call your attention to the following: After a successful hatch get a brooder for a newly hatched bird, for (don't put the baby in the bed or the man in the cradle) the first three weeks of the chicken's life is the most critical stage. After passing this danger line you will not have near the trouble. The brooder we use and recommend for this purpose is the Rouse Perfection. A brooder true to its name, and, further still, its use is true economy. You will also find it both a money and time saver. The former because it can be run with less oil than any other brooder and will accommodate as many chicks as is advisable to put in any brooder, no matter what size. A time saver (and that is money) because it can be cleaned in less time than it takes to say it. Now that you know of this perfect wooden mother, do not expect it to raise your chicks without your using proper feeds. Don't think from this that the best feed fed in a slipshod manner will help it much. If you are at all interested in your flock, then write for our valuable booklet "Feeding and Care of Chicks," which is yours for the asking if you mention the American Poultry Journal, and will help you raise 95 to 98 per cent of your chicks. Chicago Poultry Supply House, Inc., "Everything for the Poultry Men," 409 Dearborn street, Chicago, Ill.

A FEW QUESTIONS FOR POULTRY-MEN.

If your fowls are ailing, can you determine from their actions just what the trouble is?

If you can, do you know of a remedy that is absolutely reliable every time?

Can you tell just what causes that particular ailment, so as to prevent its recurrence?

Do you know that you are entitled to just so much profit from each fowl, whether you own three or three thousand?

Do you fully understand how to house them, feed them, treat them, breed them and raise them, to fully realize the greatest profit?

How would you like to have, right at your hand, the condensed opinions, the consensus of opinion, of the most successful poultry raisers of the country, as your daily guide in poultry culture?

How would you like to have this opinion of the most successful, indexed and condensed, so that you would not have to wade through volumes to get at the meat of the question you may have in your mind?

How would you like to know at once the best form of house, the best breed of poultry for a given purpose and a given locality and climate, the best appliance for a specific purpose, the best of interest for the poultryman?

As this is the season for gapes, what do you know about the matter? What causes this disease? What will you do to cure it absolutely? What will prevent your fowls from having it again? What will cure it without all the trouble and uncertainty of fumes, extractors and all that nonsense?

This is how: Look up the G. E. Conkey's advertisement in this issue and note the conditions for obtaining Conkey's book on Poultry Diseases free. It has been selling for 25 cents and is worth dollars. Send today.

If you contemplate going into the poultry business for profit, or if you are already in business, you are no doubt considering the advisability of buying an incubator. There are so many offered on the market that it is a hard matter to decide which incubator to buy. Your experience in buying other articles, of course, warns you it is poor policy to buy cheap machines, but if you can buy one of the best machines on the market at a reduction, it seems as though that should be an inducement for you to buy that particular make. In order to avoid the dull season a little later in the spring, the manufacturers of the Queen Incubator have decided to announce their summer prices early. If you consider buying an incubator, it will pay you to send for a Queen catalog and special price list which they are now putting out. There is no question as to the value of a Queen Incubator. It is as well built as an incubator can be made, has all the modern improvements and some special features that are not found in other incubators. The catalog describing the Queen is the most complete of any issued this season. The information contained in it is of much value to any one interested in the poultry business. The large facilities of the Queen factory permit the immediate shipment of incubators and brooders. If you order a Queen Incubator or Brooder, it will be sent to you without delay. This alone is of much value owing to the fact that the season is getting late. Write at once to the Pinkerton Manufacturing Company, 1021 North Fourteenth street, Lincoln, Neb., and get their beautiful catalog, which fully describes the Queen and tells you how to make a success of the chicken business.

J. H. Jackson, Hudson, Mass., the man who knows how to produce prize winning White Wyandottes, has taken up the breeding of Columbia Wyandottes in connection with his White Wyandottes, and we predict that he will make his Columbian as famous as his Whites. Send for his large 4-page circular and mention American Poultry Journal.

Archie Davis, Tremont, Ill., is sending out his 1907 circular and mating list and anyone who is interested in White Plymouth Rocks, White Holland turkeys, Embden geese or Pekin ducks should send for one and get his prices on eggs. He guarantees satisfaction with every order. Write him today and mention American Poultry Journal.

S. C. W. Leghorns

That are winners at Elgin, Jan., 1907. 1st cock, 1st hen, 2d chl., 1st pen, and are also winning in my customers' hands, scoring 95½ to 96½. If you want stock or eggs from these blue ribbon winners address **W. L. FERN, Elgin, Illinois**

Why 1907 Owen Farms Chicks Will Win

1st New York, 1906; 1st Boston, 1906

Blood will tell. **Unbeaten winners**, properly mated for best results, will produce unbeatable chicks. At Madison Square Garden, N. Y., in 1905-6-7, and at Boston in 1906, our birds won 48 firsts and cups out of a possible 67. This record has never been approached on our varieties in such tremendous competition.

These **unbeaten winners** are properly mated, and they will breed the finest chicks we ever raised. New mating list for 1907 now ready. Eggs from our best are \$5, \$10 and \$20 per 13. Eggs from well mated pens are \$3 per 13. Eggs from thoroughbred utility pens are \$6 and \$10 per 100.

Good to fine breeding birds, carefully mated for best results, and also bred from our **unbeaten winners** are yours at low prices for blood lines and quality. Let us quote you and judge for yourself. Our breeds are:

**Buff and Black Orpingtons,
Barred, Buff and White P. Rocks,
and White Wyandottes.**

Illustrated catalogue tells the story. We want you to read it and it will be mailed free if you will ask

OWEN FARMS, Box A, Vineyard, Haven, Massachusetts
WM. BARRY OWEN, Proprietor - - - MAURICE F. DELANO, Manager

WE WIN!

At the late Madison Square Garden Show, New York, in the S.C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

"Natural and Artificial Duck Culture."

By James Rankin, So. Easton, Mass.

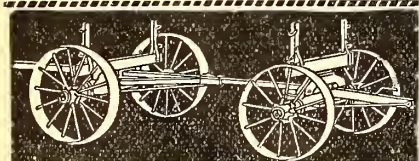

We have just published the fifth edition of our book, "Natural and Artificial Duck Culture," enlarged, revised and illustrated, describing the growth and management of the little birds, from the time they leave the incubator until they reach the market. It includes food formulas to meet the different stages of growth, also the construction of buildings and management and care of incubators during the process of incubation, as well as our experience for the past thirty years in the business. Mailed to any address on receipt of 50c.

ONE MINUTE

Imperial White Wyandottes

16 pens mated scoring from 93 to 96 with 200 egg laying records, which gives us a great combination strain of utility and exhibition stock, which are second to none. Show records this winter in very large competition at East St. Louis, Ill., won first on cockerel, scoring 95 by Judge Ross Hallock. At the big St. Louis Show won 1st on cock, scoring 95, and first on pullet, scoring 96 by Butterfield. Stock and eggs very reasonable, quality considered. Our plant is the largest exclusive White Wyandotte plant in the West, located 8 miles from St. Louis. Prospective buyers welcome, as stock must be seen to be appreciated. Satisfaction guaranteed. Write for catalogue.

GLENDAL POUULTY AND SQUAB FARM Old Orchard, Mo.

WHAT DO YOU SAY?

Several hundred thousand farmers say that the best investment they ever made was when they bought an

Electric Handy Wagon

Low wheels, wide tires; easy work, light draft. We'll sell you a set of the best steel wheels made for your old wagon. Spoke united with hub, guaranteed not to break nor work loose. Send for our catalogue and save money.

ELECTRIC WHEEL CO., Box 191, Quincy, Ill.

THE HANDY HATCHER.

Until the advent of the Handy Hatcher all incubators operated on practically the same principle. And all were about equally successful or unsuccessful, according to the person operating them, because they differed one from the other but slightly.

But this new hatching machine came upon the market and set up a new standard. The inventor declares that it is not enough to hatch a batch of chicks—the successful machine must do more than that; it must put life, vim and vigor into the birds; it must hatch chicks that will live and grow—chicks that will develop and mature.

The makers of the Handy Hatcher claim that the ordinary incubator does not hatch enough of that kind of chicks—that it does not hatch birds of even vitality. Some are strong, some weak. They say the reason for this is that the principle of the ordinary incubator is wrong.

The Handy Hatcher copies nature's way—it hatches like a hen. They assert that the same conditions exist in the nest of the hatcher that actually exist in the nest under the hen, and that this is the first time on record, in the history of artificial incubation, where this condition has been entirely duplicated. Some other manufacturers have recently been experimenting along this line, but they stopped short when they found that the change in their machines would necessitate an entire reversal of their old methods. So their new machines are not much of an improvement over their old ones.

It is really an interesting story to read how the Handy Hatcher operates, to learn how simple it is and to note where in it differs from any other incubator ever devised, and it will pay every poultry raiser to read a complete description of it before buying a new incubator. Write to Handy Hatcher Company, Roseville, Ill., mentioning this paper, and they will take pleasure in sending you their handsome new catalog free.

On another page will be found the advertisement of Coburn's Mammoth Poultry Farm, which is located three-quarters of a mile from the city limits of St. Louis, Mo. On this farm will be found several varieties of land and water fowls. Mr. C. H. Coburn, the manager, states that he has about 1,000 birds and that he has in operation eight incubators with a capacity of 2,100 eggs. His specialties are young chicks and eggs for hatching. He states that another year he will be obliged to double his capacity to keep up with his rapidly growing business. All pens are carefully mated with high scoring birds and a visit to this farm will convince the visitor that they have exactly what they state they have in their annual catalog for 1907, which is now ready and will be mailed for the asking. Visitors to St. Louis could not spend a few hours to better advantage than to visit Coburn's Mammoth Poultry Farm. Street cars direct to farm from all parts of the city. R. R. No. 29, St. Louis, Mo. Long distance telephone Forest 7588.

The proprietors of Oakwood Poultry Farms, Marshall, Ill., are making very easy prices on eggs from their Single Comb White Leghorns, when the high quality of their stock is considered. Their Leghorns are noted for their extreme whiteness, beauty and as layers. They are not hothouse birds but enjoy a wide, free range in summer and are kept in roomy, well ventilated houses in winter. They are not often exhibited, but when they are they never fail to get first on something. A few years ago they won first cockerel at Paris and in 1906 first cock, first cockerel, first hen and first pullet at Mattoon. Any one desiring eggs from a great strain of merit will do well to look up their advertisement in this issue of the A. P. J., or write for terms to Oakwood Poultry Farms, Marshall, Ill.

Jos. Fattig, Baltimore, Ohio, breeder of Rose Comb R. I. Reds exclusively, won at Lancaster, Ohio, Poultry Show, January, 1907, in competition with 97 head of Rose Comb Reds, first cock, first and fourth hens, second cockerel, first pen and first special for five highest scoring R. I. Reds on exhibition. Mr. Fattig's birds are strong in type and color, especially strong in under-color. The judges pronounced his birds correct in under-color. Get his egg circular. It's free.

Makes harness proof against heat and moisture. Gives a glossy black finish. Prevents rot. Imparts pliability, strength and durability to leather. Saves bills and mishaps. PAGE Poultry Fence

Strongest, best on the market. Fences poultry in, stock out, and lasts. Costs less erected than common netting, because it requires no boards at top or bottom and so few posts—one every 50 feet. You can't afford to buy poultry fence without investigating Page. Write for descriptions.

Page Woven Wire Fence Co. Box 586, Adrian, Mich.

ACID WEAR WATER-PROOF ROOF

Hot Coals Do Not Set Fire to No-Tar Roofing—A Wonderful Product, of Which Samples Are Sent Free.

No-Tar is the name of a roofing made by the Heppes Company in Chicago. The owners of this concern invented many of the roofings now in use, and the product they are making and selling under the name of No-Tar is in their judgment the most remarkable, the best, the cheapest by the year, and the most satisfactory of any they have ever had anything to do with.

No-Tar, as its name implies, is made without tar. Hot coals placed upon a piece of No-Tar roofing will die out without setting fire to it. No amount of water will soak through this material. Acids do not affect it. It is so tough that it is practically wear-proof and will last an ordinary lifetime. It is flexible and easily applied.

While it was originally made as a roofing material, it is used by a great many people for siding.

It never rusts out like iron or steel roofing, and costs a little over half what shingles do. For all outbuildings there is no roofing material on the market today that has so many points of excellence.

This paper is authorized to notify every one of its readers to send to the Heppes Company, 2431 Filmore street, Chicago, Ill., for a generous sample of this No-Tar roofing, which will be mailed anywhere free. This gives the purchaser an opportunity of thoroughly investigating the product before he invests a penny.

With the free sample of roofing will be sent the most valuable and sensible roofing book ever printed. It shows how to lay roofing—how to cut it for the top, or sides of any building; how to fix the roofing around chimneys so that there can never be a leak; how to turn corners; how to lap roofing; and generally contains information that every farmer ought to know. Buildings of different shapes have the roofing placed on them in different ways, and this book sent out by the Heppes Company tells the right way to put it on.

The Heppes Company desires every reader of this paper to write for a sample and the book, with the understanding that there is no obligation to buy.

E. J. Fish reports surplus stock all sold except a few extra choice breeders, which he is offering at half price to close them out. Mr. Fish has mated sixteen of his best females to his winning males at Cleveland, Ohio, and offers eggs for sale. At the Cleveland, Ohio, show he won in competition with Chicago, Boston and New York exhibitors, first and third cocks, fourth and fifth hens, second, third and fourth cockerels, first, third, fourth and fifth pullets; silver cup for best display, in one of the best and largest exhibits of thirty Buff Cochins brought out this season. See display ad and if interested in the grand old fowl write him at Strongsville, Cuyahoga county, Ohio.

Elsewhere in this issue will be found the illustration of the White Wyandotte cock Regal III, owned by John S. Martin, Port Dover, Ont. The following is his record to date: First Canadian national cockerel, 1904, first Canadian national cock, 1906, first New York State Fair cock, 1906 (in competition with the winner at Madison Square Garden, 1906), sire of "World's Champion" Regal IV, first prize and sweepstakes at Boston, 1907. Send for Mr. Martin's 1907 mating list and mention American Poultry Journal.

Winter Eggs. How To Get Them.

Are you getting any eggs this winter? If not let us show you where the trouble lies. While you are keeping chickens through the winter you may as well make a profit on them. Our method makes them more than pay for their feed in eggs, even when grain is high and green food scarce. Everybody's chickens lay eggs in warm weather. We show you how to get eggs in winter, even from late hatches—and you can prove it at our expense. You know that some fowls lay eggs all winter. If yours don't, why not find out the reason.

Coop poisoned fowls cannot lay eggs at any time, neither can a sick fowl. With our method fowls are kept absolutely free from lice, colds, roup, diarrhoea and cholera. We have something for coop poisoned flocks, too. We show you how to get weight and size in exhibition poultry, and how to raise all little chicks and turkeys that can be hatched. We can help you, but you must write us first. Send a postal card today. We will send you free receipt by next mail.

516 Monroe Street - - - Toledo, Ohio**

ELECTRIC HANDY WAGON ON AN AFRICAN DESERT.

It represents in part a great caravan crossing the Nubian desert from the valley of the Nile to the western oasis in upper Egypt. It was the first wagon train that ever crossed this desert, and was the forerunner in opening up to civilization a vast territory not yet on the maps of the world.

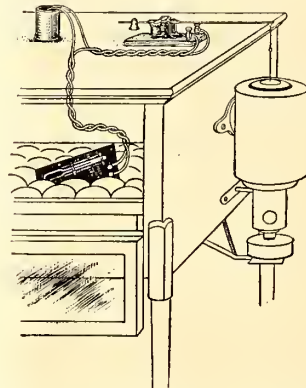

The caravan was in charge of Mr. James S. Grey, formerly of Lima, Ohio, who represents a large English corporation in making drillings in Egypt. The picture was taken early in 1906. Of course only camels could be used for drawing the wagons in that climate. Mr. Grey had made a former attempt to cross the desert, starting with ordinary wagons and carts, manufactured of wood, but they failed to stand the evaporating power of the desert sun and all gave out.

This illustrates very forcibly the sterling character of the Electric Handy Wagon. It should serve as a useful hint to wagon buyers at home. These wagons are not specially made for desert work. They were the regular pattern wagon, secured from stock kept in Pittsburgh, Pa., and fitted with electric steel wheels. These wheels can be made to fit any wagon. They served admirably under the heavy loads in the trying journey over the hot, dry, trackless desert. There is no question about their excellence for use in any climate. But the great point is their convenience and labor saving in the farm work. With the low wheels with which they are usually made, they are nicely adapted to all sorts of farm jobs. They are guaranteed to carry a load of 4,000 pounds over any kind of road. In last-ling qualities they are far ahead of the wooden wagon, which always has a train of such incidents following as tire setting, rattling spokes, loose felloes, breakdowns. In almost every instance, too, the draft is lighter than on the narrow, high, wooden wheeled wagons. Everything considered, it is certainly entitled to be called the wagon of economy.

For particulars in regard to the above expedition and detailed information in regard to the Electric Handy Wagon or Electric Metal Wheels write direct to the Electric Wheel Company, box 20, Quincy, Ill.

THE UNIVERSAL REGULATOR.

The above illustration will give our readers an idea of how the Universal Regulator operates. These regulators have been thoroughly tested and are now being used by several of the leading incubator experts of the country, and are giving entire satisfaction. They will be pleased to send their booklet to any of our readers on request.

which we think will convince them that this regulator is worth their careful attention. In the words of J. H. Drevstedt, "the Universal Regulator is one of the latest, and if we are not greatly mistaken, the most valuable invention of the twentieth century in controlling the temperature of the egg in the incubator." They guarantee every regulator to give perfect satisfaction or refund the money. Send for their booklet and mention American Poultry Journal.

J. B. Howe, Kentland, Ind., the White Plymouth Rock specialist, is selling eggs from some very choice matings this season. Mr. Howe has had twenty-five years' experience in breeding chickens and knows how to mate his birds to produce the good ones. Look up his ad in this issue and write him for full particulars.

THE CORTLAND INCUBATOR & MFG. CO., OF CORTLAND, N. Y.

The Cortland Incubator & Manufacturing Company, of Cortland, N. Y., has begun business under extremely favorable circumstances.

They stepped into a well equipped woodworking plant, ready for business, when they purchased the buildings and machinery of the Reeve Manufacturing Company, which made kitchen cabinets and sleeve boards.

Mr. L. H. Hewitt, president of the company, as well as Mr. Fred Tyler, vice president and treasurer, are well known business men of Cortland, who possess ample capital and unbounded enthusiasm in the future of the poultry business.

Mr. H. G. Guimaraes, secretary and manager of the company, also treasurer of the Incubator Manufacturers' Association of America, is an old hand in the incubator field and is the inventor of one of the standard incubators on the market.

He was first to advocate moisture in the incubator—first, last and all the time—and exhaustive experiments recently concluded at the Ontario College of Agriculture, Guelph, Canada, and at the Utah College, Logan, Utah, fully bear him out in his contention.

The Cortland Incubator is a high-grade machine, made of chestnut, paneled, cabinet finished, and waxed in old mission style.

It is a moisture machine with a tight bottom and possesses many improvements not found in any of the other incubators of the present day. It is a combination right and left hand machine, made with double doors, and the thermometer in the egg chamber can be seen without opening the inner glass doors. The chicks and ducklings are taken out from both sides of the incubator.

The Cortland Illustrated Catalogue, just from the press, fully describes this perfected machine and you cannot afford to be without it. It will be mailed you free for the asking, provided you mention this paper.

The Cortland Brooder is a roomy, cheerful, fresh air machine; the heat comes in from the top, there being no bottom heat whatever; and this is the only system by which chicks can be reared successfully.

The Cortland Brooder Lamp is smokeless and blowoutless and is so arranged that the fumes cannot enter into the brooder chambers.

The Cortland catalogue fully describes this new, improved brooder, as well as Cortland coops, portable houses, poultry farm appliances and foods.

Do not fail to send at once for the new Cortland catalogue.

There is no occasion at this day to argue the necessity of spraying. But there is need of more thorough and more systematic spraying. There is need, also, for a better understanding of spraying appliances. We are persuaded that if the spraying devices in ordinary use could be exchanged for the up-to-date spraying machinery manufactured by The Deming Company, Salem, Ohio, there would be more incentive to spray, there would be actually a far greater number of sprayers, the work would be more thoroughly done, and the results would be infinitely better than they are. Send for their book, entitled "Spraying for Profit," and mention American Poultry Journal.

Fred E. Wright, Monmouth, Ill., the Single Comb Buff Orpington specialist, reports the following winnings on his birds at the Monmouth, Ill., show January, 1907: First, second and third cock; first, second, third and fourth cockerels; first, second, and fourth hen; first, second, third and fourth pullets; first, second and third pen. The cockerels competing against a \$50 imported cockerel.

S. C. Rhode Island Reds, owned by the De Garff Poultry Farm, Amsterdam, N. Y., have won during the winter the following prizes: Five firsts at Johnstown, N. Y., five firsts at Auburn, N. Y., five firsts at Schenectady, N. Y., besides nearly all club specials and ribbons offered on this breed.

Charles C. Reid, Delaware, Ohio, breeder of Rhode Island Reds, has several fine pens mated up for best results. Mr. Reid's winnings are too well known to require mentioning.

A BIT OF INCUBATOR HISTORY.

The above is the heading of a very interesting chapter in the late catalogue of The Petaluma Incubator Company, Petaluma, Cal. Any one reading it will learn something which, very likely, he did not know before—namely: that the Petaluma Incubator was one of the very first incubators that proved a success and was offered to the poultry raisers of the country in a commercial way.

The Petaluma was at the first, and has always remained, a business incubator. It has always had men behind it who were enthusiasts and eminently successful in the poultry business. They chose the redwood of California for their wood material. There is nothing known to the lumber trade that is any better for the purpose. The plan and the devices are of the best. Their nice control of the heat and ventilation has always been the wonder of poultry men. It is claimed that in holding to a uniform temperature under all conditions it stands among the very first of all incubators. The results are uniformly high, which, of course, is the highest test of any incubator.

The Petaluma Company maintains an Eastern branch at Indianapolis to facilitate distribution of their machines. They pay freight all over the country. No one need be deterred from getting the famous Petaluma on account of freight charges. The catalogue reveals the fact that the price is not greater than other leading incubators and brooders, and these prices mean for the goods delivered at the buyer's station. Write to the company either at the Petaluma or Indianapolis address if you are interested in incubators or early incubator history. The advertisement elsewhere gives particulars of address.

RIGHT CHICK FEEDING.

In these days people don't have so much trouble with the hatching of chicks as with nurturing them along to maturity. Incubator building has been reduced to a science. The machines as a rule do not require any particular skill in operating. The makers have succeeded in making them to a marked degree automatic, which enables the inexperienced operator to get in most cases as good results as the old hand at the business.

When it comes to the brooding of the chicks, however, the real difficulty arises. The losses the first few weeks after hatching may well distress the beginner. Probably not over half of the chicks hatched reach maturity. To raise all the hatch, or nearly all, is counted a rare gift among poultry men and women.

A good many regard the matter of temperature as the chief thing in successful chick raising. This is a great mistake. Keeping up a uniform temperature, providing a hover, keeping chicks dry—these are all important, of course, but not any one of them, nor, in fact, all together, is such a vital matter as what the chick takes into its stomach. The real difficulty is in the proper feeding. Most of the ailments are traceable directly to what the chick is given to feed upon. The real difference between the one who raises all or nearly all the hatch and the one who loses half is that the former appreciates the need of feeding the right food and does feed it, while the latter goes at it haphazard.

This suggests the necessity of getting in touch with some concern which has made a specialty of the matter of supplying chick feeds. Among those best known and considered most reliable in this line may be mentioned the firm of Darling & Co., of Chicago and New York, who are specializing on their chick feed at this time. They manufacture a full line of poultry feeds, all of high quality, but their large chick feed advertisement in this issue is most timely. They state the claims of their feed in strong terms, but they seem to be warranted in so doing by the testimonials from users which they show. The Darling Chick Feed, as well as all their other feeds, has a good reputation. We vouch for the firm's being a reputable concern. Readers of their ad in this issue will want to have the Darling catalogue for this year and further particulars. It will come promptly on request and it is a good book for poultry raisers to have on hand. Before writing for it consult the advertisement for details of address.

METHOD VS. PROFIT IN THE MANAGEMENT OF POULTRY.

Poultry keeping has been passing through a rapid evolution toward better things. The old-time way of allowing fowls to forage for themselves in summer and to be fed largely on corn in the winter time has rapidly given place to a far more rational method, which is producing greatly improved conditions in the flocks and a much larger percentage of profit to their owners.

Along with this improvement in the matter of feeding there has also developed a systematic way of selecting the laying birds and determining which are yielding the greatest number of eggs.

The selection of layers is a highly important matter, because in order to develop a heavy laying strain a man must breed only from his best and most prolific birds. Of course, it is possible to do this simply by observation or the trap nest, but a far better "system" has been devised which eliminates a great deal of the difficulty and trouble experienced by the man who tries to select his laying hens by watching or trapping them.

By the Potter "system" it is possible to easily separate the layers in your flock; pick out hens that are laying now, and also to tell those birds that will begin to lay in a short time. To be able to do this is a great advantage and is worth considerable money to the poultry man who is producing eggs for market, as it enables him to tell readily which birds are yielding him a profit and which should be disposed of as unprofitable. As an instance of how perfectly the "system" works the following experience is given by a poultry man who is familiar with and uses the "system." A crate containing twelve birds which had been purchased to kill and dress for market was examined, according to the "system," and it was found that nine out of the twelve were not in a laying condition. Of the remaining three the "system" showed that one was laying right along, another was either laying or about to lay, and the third would probably lay in the course of a month. After the birds were dressed an examination was made to see how far the "system" had been correct in its application, with the following result: In the first bird was found a fully shelled egg. In the second there was a large number of eggs, some as large as an English walnut, and the hen had very likely laid within a day or two. The third bird was full of eggs, in size from a pea to the head of a pin, showing the "system" had forecasted correctly in her case. The remaining nine birds showed no sign of eggs. This practical demonstration of the working of the "system" shows how very accurately it works out in practice, and, while it is simply one instance, it proves its value to any one who is engaged in poultry raising for profit.

The Potter "system" is a very complete and accurate method and it would pay any poultry man who is not familiar with it to send for circulars and particulars, which will be furnished free by addressing T. F. Potter & Co., Downers Grove, Ill. When writing kindly mention this paper.

RIGHT PRICE ON INCUBATORS.

Poultry raisers have no occasion any longer to complain of exorbitant prices charged for incubators and brooders when such a reliable machine as the Belle City Incubator is selling for \$7 and the Belle City Brooder at \$4.50. These Belle City machines are made on approved plans of the hot water type and are justly regarded as among the very best machines made by the very large number of poultry people who believe that hot water carries with it the true method of heating for incubating and brooding chicks.

The regular price of these two machines is \$22, almost a 50 per cent cut. The offer is a limited one as to time. It may not appear in our paper again. A dollar saved is a dollar earned. It would certainly seem that right now is a good time to buy.

The Belle City machines are manufactured by the Belle City Incubator Company, Racine, Wis. The company's book, "Hatching Facts," gives full particulars and is gladly mailed free to any one writing for it.

Send to Charles Hawison, Sandwich, Ill., for a setting of Buff Wyandotte eggs.

S. C. BLACK AND BUFF ORPINGTONS

Willow Brook Prize Winning Strain

Eggs—Blacks, \$5 per 15; Buffs, \$3 and \$5 per 15. Fertility and quality guaranteed. Place your order today if you want something fine.

Box 238 - Washington, Tazewell Co., Ill.

Wm. Cook & Sons

(Established 1873)

Originators of all the Orpington Fowls

Box A, Scotch Plains, New Jersey

As usual, we secured another unbeaten show record at Madison Square, 1907, winning twice as many first prizes as any other Orpington breeder. Twenty-one prizes including 10 firsts and six seconds. We have secured 58 first and 41 second prizes in four showings at Madison Square. These facts show we have the best, but that is only natural, as we are their originators. We keep all ten varieties. Send for our illustrated catalogue. Free. Containing full history of the Orpingtons.

EGGS from the finest Orpingtons that exist, and our winners, at \$10 a setting; from grand birds \$5.00 a setting. All eggs guaranteed fertile. Stock for sale. Write requirements.

Inspection of our poultry plants cordially invited. Trains met. Advice free.

Editors and Publishers of the Orpington Poultry Journal

Laying White Wyandottes

Bred for eggs and beauty. Get the strain that will shell out the eggs. **Trap Nests** used for years and none but heavy layers bred from. Eggs \$2.50 per 15. Incubator eggs \$6 per 100.

Your Name Will Get \$2 Eggs For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the world. I keep 2000 of the celebrated Chamberlain laying strain on my Experimental Farm, and to increase the sale of my Perfect Chick Feed, I will send to any one who will send me their name so I can send them my Perfect Chick Feed Catalogue, 2 sittings of Single Comb Brown or White Leghorn Eggs for \$1 for the 2 sittings. Only 2 sittings sold to one person. White or Barred Plymouth Rock, or White or Silver Laced Wyandotte Eggs \$1 per sitting. This is a rare chance to get a start of extra fine stock. Send money and have your orders booked at once. W. F. CHAMBERLAIN, (The Perfect Chick Feed Man) KIRKWOOD, MO.

Start Right DO IT NOW

The Acme Poultry Account Book is a book gotten up by a practical poultry man, as an aid to busy poultry people. It consists of 12 pages to be used as a daily egg record, with columns for daily total, monthly pen total, daily pen total, monthly total for all pens, pen average and average for all pens. It has pages devoted to hatching and rearing records, and 12 pages with Dr. and Cr. columns, so that you may know your expenses and receipts to the cent.

In addition it contains a number of fattening ratios, feeds, etc., and items of usefulness which the busy man has no time to memorize, but which he will find use for a hundred times a week. Price, complete, 25c in stamps or money order. Address all mail to

or more have a chance of getting a premium. Our space is too small here to explain all we give to everyone who helps us. Send today for our offer, it will explain all. Do not miss sending for it; the \$100 may be yours by so doing. Those who have already received our premium list send for the Grand Prize Offer.

American Poultry Journal Publishing Co., - Room 510, 325 Dearborn St., Chicago, Ill.

Why should you not be the winner this year? See what he says about how easy it was to get \$100 cash:

Dear Sir:—Received your check for \$100.00 for which please accept my thanks. It certainly is a pleasure to work for American Poultry Journal; the paper sells on sight to parties interested. Have worked only 4½ days to secure the subscriptions that have landed me the prize. Wishing you and the Journal success, I remain Very truly yours,
S. M. YODER.

You can be still luckier this year, for you can not only get the \$100 cash, but

CAN YOU ANSWER THESE QUESTIONS?

In what position should eggs be placed in an incubator tray?

What makes crippled chicks at hatching?

When should you commence turning eggs in an incubator?

How often should they be turned?

How long should an incubator be run before you put in the eggs?

When is the best time to test out eggs?

Where is the best place in which to set an incubator?

What is the best way for keeping eggs for hatching?

How should young chicks be fed?

What are the most profitable breeds of poultry?

These and a thousand other questions of practical value concerning the care and breeding of poultry are all answered in the thirteenth annual edition of the Successful

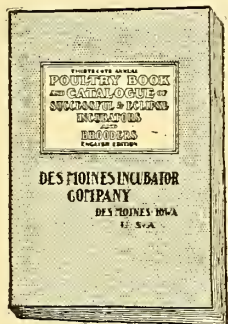

ing this severe weather and eggs hatched fine. I wish you could step in my brooder house and see my 1,500 young chicks and see them grow on this feed at 10 cents per bushel. You would say, 'You have solved the problem;' and my chicks run 150 to 300 in a pen 6x8 outside of hover. My book is having a wonderful sale and everyone pleased with it. I am satisfied I can put any plant in this country on a paying basis, no matter how big a failure it has been in the past. I wish everyone who is not making a success would write me for my free circular and testimonials and mention American Poultry Journal."

Ira C. Keller, Prospect, Ohio, reports that he is well prepared to take care of his customers in the egg trade, and assures us that his customers will get eggs from the same pens that he uses for his own hatching. He also says that he has several hundred fine birds yet to spare that he will let go at bargain prices. He also has some very fine Collie pups. Mr. Keller is

At any rate let Mr. Greider send you his handsome catalogue. It gives a world of information about different breeds that no lover of poultry can afford to miss. Drop a line to B. H. Greider, Rheems, Pa., enclosing 10 cents, and this valuable book will be sent you. Mention American Poultry Journal.

Economy in feed and labor is one of the main roads to success in the poultry business. H. A. Nourse, C. St. Anthony Hill Station, St. Paul, Minn., has perfected a poultry feeder that saves labor and feed and prevents disease from improper feeding. Every reader of American Poultry Journal should be interested in this device and should send for a circular, which will give them full information. Write for one today and mention American Poultry Journal.

In this issue will be found several illustrations of Barred Plymouth Rocks from the yards of J. W. Parks, Altoona, Pa. These are fair examples of the type of

Poultry Book, an immense volume of 128 pages, fully illustrated with scenes of poultry farms and descriptions and pictures of all leading breeds of fowls.

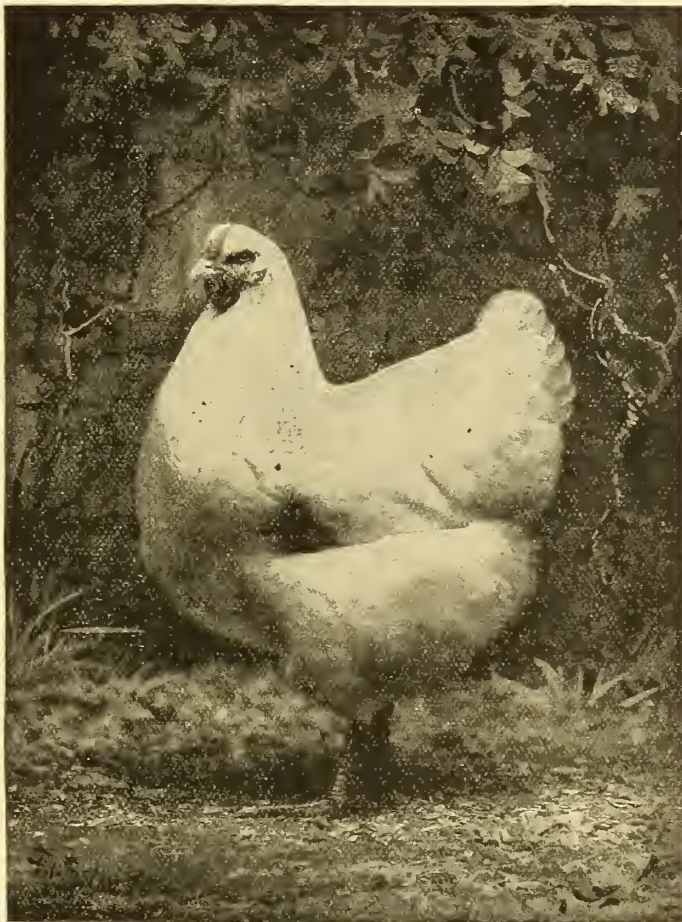

It contains a number of prize articles on incubation, together with the experiences of hundreds of poultry raisers who have used the Successful incubator.

It's one of the most valuable poultry books we have ever seen and we know our readers will not only be interested in it, but will find it of real help in making more money from their fowls. It is published by the Des Moines Incubator Company, one of the leading manufacturers of the country, and indorsed by Gov. A. B. Cummins and Congressman J. A. T. Hull.

Don't fail to get a copy. It is sent free if you mention this publication. Address Des Moines Incubator Company, Des Moines, Iowa.

Dalley & Douglas, Flat Rock, Mich., in recent communication to us, say: "It gives us pleasure to advise you that we have just acquired property adjoining our ranch which gives us in the neighborhood of 150 acres—fifteen acres being in orchard, where our young stock and breeders are confined. Our eggs are testing to a very high degree of fertility and we will raise in the neighborhood of 5,000 White Rocks this spring. We will book orders for only fifty more settings of eggs, and we know positively that our eggs at \$4 per setting would not be duplicated by any other White Rock breeder for less than three times the money. We are giving our customers eggs from our best pens, as we realize that this is not a business of a season, but one of years, and the satisfied customer is the best medium of advertising a company can have. You have not heard a very great deal about Dalley & Douglas until recently, but if you could see our breeding pens and general care and attention given to our flock, you would feel that too much could not be said in favor of the Dalley & Douglas White Rocks. Our flock is not a mixture of all strains, but comes from the best White Rock blood in America. They are pure white, have the winning White Rock shape and we don't believe you would find ten birds in our whole flock that have poor eyes, and we have one of the largest flocks in the country."

Edgar Briggs, New Rochelle, N. Y., informs us that his system of feeding is still giving him the wonderful results we observed when at his farm last summer, which goes to prove that his system of feeding is all that he claims for it. He says: "During February here, with mercury from zero to 20 below, my hens have not failed to shell out from 50 to 70 per cent egg yield and their main feed cost but 10 cents a bushel. Eggs ran 90 per cent fertile dur-

"PRINCESS QUALITY."

A New York winner at Madison Square Garden, January 1 to 5, 1907. Bred and owned by Edward E. Ling, South Portland, Me.

one of our oldest advertisers and is too well known as a Wyandotte breeder to require further comment by us. Look up his ad in this issue and write him for what you want. Mention American Poultry Journal.

In our March issue we called our readers' attention to the ad of Mrs. J. H. Orebaugh, Batavia, Ohio, and said that she was desirous of closing out her stock, as she intended to engage in the millinery business. Mrs. Orebaugh says this is a mistake. It is her husband who desires to change the location of his business, and she will probably continue to breed pure bred fowls, no matter where they locate.

Paul T. Hobart, formerly of Roscoe, Ill., is now located at Dickey, N. D., where he will continue to produce the blue ribbon winners in Single Comb Brown Leghorns. Write to him at his new location and mention American Poultry Journal.

Anyone interested in poultry, either as a pastime or business, should see the model poultry farm of H. B. Greider, Rheems, Pa.

Rocks produced by Mr. Parks. These are the egg laying type and this strain is famous for their great laying qualities. Write Mr. Parks for his circular and prices and mention American Poultry Journal.

One of the neatest and most artistic mating lists that has come to our desk this spring is the one sent out by Ira B. Sleet, Warsaw, Ky., the White Wyandotte specialist. Everyone who is interested in this variety should write Mr. Sleet for a copy and mention American Poultry Journal.

Charles D. Cleveland, West Orange, N. J., the White Wyandotte specialist, is offering eggs from his prize winning pens at very reasonable prices, and our readers will make no mistake if they order from him. Write today and mention American Poultry Journal.

Nate K. Cornwall, Thamesville, Ont., Canada, breeder of "Canada's best Buff Leghorns," has gotten out a very neat circular describing his 1907 matings, and we ask our readers to send for a copy and mention American Poultry Journal.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word** each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings**. No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** is furnished every advertiser during the time his ad is running. **Sixty thousand per month.** We guarantee an average monthly circulation of 60,000 copies of **AMERICAN POULTRY JOURNAL**. When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

"DUKE OF KENT" STRAIN of S. C. Black Orpingtons. No strain of Black Orpingtons in the world stands higher. Season, 1907. There isn't a state in the Union where, in the shows of the present winter, a splendid list of first prizes have not been carried off by cockerels and pullets hatched from eggs shipped from my yards last year. One customer writes: "I got three cockerels out of the setting, and this week, in hot company, I took first, second and third prizes at our big show. The judge said the first prize bird was the best Orpington he had ever handled." Eggs now ready; \$4 for 13; \$7.50 for 26. You cannot get any higher grade eggs, even at \$10 per setting. Last year I could not supply half my orders. Fifty prize winning cockerels for sale at \$10; others cheaper. Write postal for chromo of "Duke of Kent." Sent free. D. N. Foster, Ft. Wayne, Ind., State Vice President of American Orpington Club. 2-4

SINGLE COMB BUFF ORPINGTONS. England and America's best blood. Four prizes on three entries at Chambersburg. Eggs, \$1, 13; \$2, 30; \$5, 100. J. W. Tedrick, Williamson, Pa. 2-3

L. P. CLARK, Supt. ROSEMARY FARM
Huntington Long Island, N. Y.

1 FOOD FOR THE 2

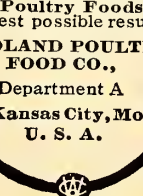

LITTLE FELLOWS

Nursery chicks need especially good food—it must be adapted to their delicate digestive organs. Maybe that's why so many of your chicks die. They won't if you feed the baby chicks **No. 1 Midland Poultry Food** from the first feed until they are two weeks old. By that time they will be ready for **No. 2**, which will keep them growing. These two foods will insure you raising a greater percentage of your chicks this spring than you ever raised before. Just try it and see.

Midland Poultry Foods

are fed in mash form. The fowls therefore get all the elements we blend in the food to make a proper scientifically balanced ration. Cannot eat the parts they like best and leave the parts they need most. There are many advantages in mash foods, but if you prefer a dry chick food we can supply you the best one made in our **Midland Chick Food**—all food—not two-thirds broken rocks and cheap grits with a few seeds. **Midland Foods** are used by more successful poultrymen than any other food. Why? Because they have proved their value as money-makers. Write today for our two poultry books, "The Science of Poultry Feeding" and "Poultry Fattening Perfected." They will be worth dollars to you but we send them free and tell you how to buy and feed **Midland Poultry Foods** for the best possible results.

MIDLAND POULTRY FOOD CO.,
Department A

**200 Egg
Incubator
\$12.80**

**THE
WOODEN
HEN**

At \$12.80 the Wooden Hen is the best 200 Egg Incubator on the market—the remarkably low price being made possible only by the immense production forced by the constantly increasing sales of this perfect hatcher. Substantially built and thoroughly finished throughout, it solves every problem of ventilation, moisture and heat—practically runs itself and requires but five minutes' time daily while in operation. The Wooden Hen is not only the best of incubators and the most economical to operate, but it also hatches the greatest proportion of fertile eggs. Send for free catalogue, illustrated in colors, containing full information regarding Incubators and Poultry Appliances.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes, 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.

Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Pembroke, Maine

DIRECT \$4.88 TO YOU 4 AND UP

This means we save you the agent's profits. You buy direct from the manufacturers at factory price. That is why we can sell you one of the best incubators built at such a low figure. The

GEM INCUBATOR

is a well built and guaranteed hatcher. Has a Removable Chick Tray and Nursery and other desirable features. Write for our free money-saving catalog. Remember you get 2 hatches free and we give 5 years guarantee. **GEM INCUBATOR CO., Box B, Trotwood, O.**

Our Claims Confirmed

The 1907 Prairie State Incubator is more than making good our claims. It has even exceeded our own expectations in the hands of its users. And that's the test of all tests. That's what determines the value of an incubator. It's how well it meets the purchasers requirements that counts.

The 1907 Prairie State will be found equal to the highest anticipations of its purchasers. It will even surprise you with the unusually large, strong, vigorous chicks it brings out. Early in the winter we sent a large number of these incubators to the principal Experimental Stations north, south, east and west. We wanted them put to the severest tests and knew that at these

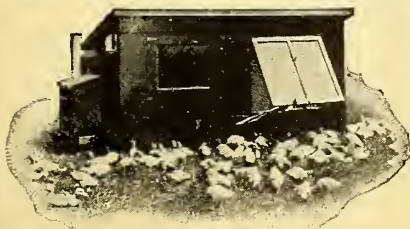

Stations nothing but an impartial, honest report would be given. In every case they have given excellent results. The reports are particularly good on size of chicks, vitality and low percentage of fatality, being far better in each respect than any other machines used. They also bring off the greatest number of chicks.

In buying an incubator it is to your interest to get the machine that will produce the greatest number of chicks—the largest chicks and the kind that are hatched strong enough to insure that they will live. You'll not be disappointed if you get the 1907 Prairie State. Send for catalog and learn why it hatches the kind of chicks that pay.

BROODERS that RAISE the MOST CHICKS

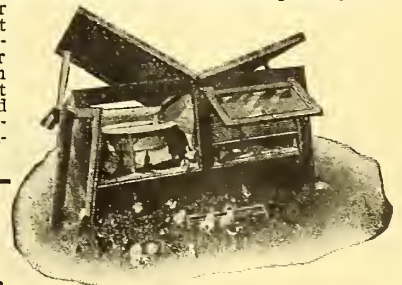

The right brooder is just as important as the right hatcher. Too much care cannot be given to the selection of the brooder you buy, because so much depends upon the chicks you raise as to the success of your undertaking. There are many decided reasons why the Prairie State Colony House Brooders for out-door use will raise the highest percentage of chicks. They afford the greatest adaptation to the varying physical natures of a brood of chicks. They are roomy, well ventilated, dry, easily regulated, have over-head heat and can be run successfully in the coldest

weather. The open front adapts it to summer use with or without shade and chicks are protected from rain and storms at all times.

The Lamp Will Not Blow Out

The lamp being specially protected with a lamp box cannot blow out and the arrangement makes it particularly convenient to get at for filling, trimming, etc. These Brooders are made in three sizes and meet the need of the large or small poultryman better than any other made. Last year a great many bought these brooders single, but this year they are re-ordering in lots of 50 at a time. That proves their practical and satisfaction-giving qualities. Send for our Brooder Catalog today.

We give with each brooder our book, "Artificial Rearing of Chicks" which covers every point of artificial rearing.

**PRAIRIE STATE INCUBATOR CO.,
468 Main Street, Homer City, Pa.**

POULTRY CUTS

Our new catalog now ready; latest and best designs; all varieties; send for it today. Also poultry post cards; sample of your variety for stamp. **Chas. L. Stiles, 42 E. Gay St., Columbus, O.**

F. H. DAVEY, Manager - YONKERS, NEW YORK

You Need Protection So Do We — That's Why

Cyphers Poultry Foods Are Sold Only In Sealed Bags.

Refuse all bags from which the seal has been removed.

What's the use of putting your valuables in a bank unless they are under lock and key? What's the use of asking you to Buy the Best Poultry Foods unless we guarantee them to be The Best? And what's the use of attempting to Guarantee them to be The Best unless we **protect ourselves in their sale and protect you in their purchase** by placing them Under Seal?

NOBODY—not even one of our valued 7,000 Agents—can buy Cyphers Poultry Foods from Us in Bulk. Its reputation is too Valuable for us to risk adulteration. It is therefore Sold Only in Sacks of 50 and 100 pounds—**Every One Sealed**. First we buy the **Pure Grains Unmixed**; Then We Remove All Weed Seeds; Next the grains are **Scientifically Balanced** for our several foods, which are then weighed, sacked and Sealed.

Cyphers Chick Food **QUICK-GROWTH HEALTH-GIVING** Is By Us So Protected From Adulteration

because we want your trade. We want you to know that when you buy it you are getting value for your money. **Cyphers Chick Food Makes Chicks Healthful** because it is scientifically balanced; it is so blended as to furnish food for muscle, food for feathers and flesh-forming food. Avoid indigestion, diarrhoea, and consequent mortality by using it as the following breeders have:

Winners Raised On Cyphers Chick Food

Chicago Winners.

At Chicago show my second prize pen, first and fourth prize hens, second and fourth prize pullets and third prize cockerel were all hatched in a Cyphers Incubator, brooded in a Cyphers Brooder until they were six weeks old and were fed almost exclusively on Cyphers Foods until over three months of age. F. C. Shepherd, Toledo, Ohio.

Never Lost a Chick from One Hundred.

Your Chick Food is the best food for little chicks that I have ever used. I used it for the first three weeks on one hundred chicks and never lost one. They were entirely free from bowel trouble. I would not be without it for twice what it costs. R. F. Fieldhouse, Hurley, S. D.

"Used Many Tons of It."

Can heartily recommend your Chick Food, as I have used many tons of it. It possesses all the necessary ingredients for promoting growth in little chicks, and is a food which does not cause diarrhoea or other bowel troubles so common to the little chick. In short, it is a perfectly balanced ration.

C. E. Hamilton, Chazy, N. Y.

Laid Within Five Months.

Your Chick Food fills the bill. Chicks (White Leghorns) hatched February 25th, raised on Cyphers Chick Food, laid first eggs July 6th.

Wm. T. Gillespie, Rising Sun, Md.

New York and Cincinnati Winners.

At the great New York show last month I won 2nd cockerel, 3d cock and 4th breeding pen, and at the American Poultry Ass'n show held at Cincinnati I won 2nd pen, 3rd and 4th cocks, 3rd and 4th hens, 3rd and 4th cockerels and 3rd and 4th pullets on our Partridge Wyandottes, and these prize winners were all hatched in the Cyphers Incubators and reared on Cyphers Chick Food.

H. B. Hark, Hartman Stock Farm, Columbus, Ohio.

New York Winners.

I have used Cyphers Chick Food for two years with record-breaking results. All my New York winners were reared on this feed, and I shall never attempt to raise chicks without it. C. H. Welles, Stratford, Conn.

No Drooping nor Stunted Chicks.

Your Chick Food proves very satisfactory to me. My chicks thrive on it for a longer time than they possibly could on any other single diet. **No drooping nor stunted chicks are found while fed on it.** Many others as well as myself are beginning to see the value of such a scientific food. Samuel Dowds, Dunbar, Pa.

I Have Not Lost a Chick Since Using It.

I bought a sample of your wonderful "Chick Food" and at the time had a couple of broods of White Wyandotte Chicks. Year after year I lost a great many small chicks but since using your wonderful "Chick Food" I have not lost a single chick.

A. J. Seits, Philadelphia, Pa.

The Largest Poultry Food Mill in the World

is our Kansa City Mill where we manufacture **nothing but poultry foods and clover and alfalfa products**—no breakfast foods nor ordinary stock foods. From us every customer will receive absolutely sound, cleanly cut, dust-free grains; not by-products, waste materials and sweepings that remain after putting the better parts of the grains and seeds into other foods. The following is our list of Balanced Poultry Foods. Every sack contains a 16-page booklet "Foods and Feeding" telling how to feed:

**CYPHERS LAYING FOOD
CYPHERS DEVELOPING FOOD
CYPHERS SCRATCHING FOOD
CYPHERS FORCING FOOD**

**CYPHERS CHICK FOOD
CYPHERS SHORT-CUT ALFALFA
CYPHERS SHREDDED ALFALFA
CYPHERS MEALD ALFALFA**

Six Places of Business and Over 7,000 Dealers—To save customers time and money, to lessen the freight charges, and insure quick delivery, we maintain six branch houses whose addresses are given below. Goods will be shipped from the branch nearest to you, if you write to that branch. Ask your local dealer for Cyphers Foods and accept no other. If he doesn't keep them please write our nearest branch for **Free Samples** of either of the above Foods.

Our 1907 Catalogue, entitled "How to Make Money With Poultry and Incubators," will be mailed Free to all who mention this paper and send us the addresses of two neighbors who are interested in poultry for profit. It has 260 pages, and contains A Large Amount of Valuable Information, including Six Chapters on Poultry Raising for Profit, the Raising of Broilers, Roasters, Capons and Ducks for Market, Poultry-keeping on the Farm, Photographs of America's Leading Successful Poultrymen, and Illustrations of the Largest Poultry Plants in the World. King's Barred Rocks

Have justly earned their way to championship honors by making almost a clean sweep at three Illinois State Shows, 1904, 1906, 1907. Winning every first prize and a grand total of 48 out of a possible 60 regular prizes and every special offer on the entire class for three years but one, including the Barred Rock Club State Cup for best Cockerel, Hen, Pullet and Pen. Contemplate the above winnings and you should be convinced where a few of the good ones are produced. Eggs from these winning kind only \$6.00 per setting. Large testimonial sheet, egg circular and latest show record free. It should interest you.

O. L. KING, Walnut Grove, Illinois

**Keeler's White Wyandottes
The World's Greatest Strain**

THE STRAIN of the correct type, the winning type, the strain that breeds on and on, reproducing itself true to type. The Keeler strain is true Wyandotte and will breed you true Wyandotte shape; their ancestors have been winners at America's leading shows for the past twelve years. They are winning today and will win in the future because they have more carefully bred blood lines than any other strain in existence, setting the stakes five (5) years ahead of their closest competitors; they are in fact as well as in name,

The World's Greatest Strain

Do you want eggs from my eight (8) grand pens containing the cream of the best birds raised the past four years. They have nice curving corrugated combs, red eyes, nice arched necks, broad back, short, well spread tails, full round broad breasts, fine yellow legs and weak, standard weight or over; are white from surface to skin and will stay white in the hottest summer sun. My forty-page illustrated catalogue that shows them as the camera saw them will convince you, it's free for the asking, send for it today. Eggs from the finest of exhibition matings \$5 per fifteen, \$9.50 per thirty, \$15 per fifty and \$25 per hundred.

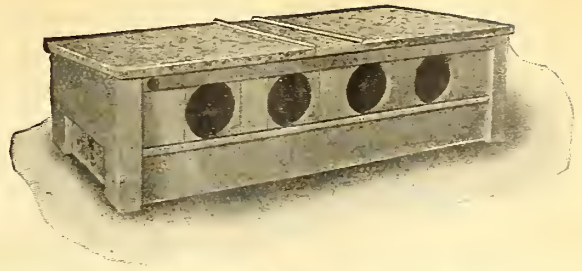

SPECIAL NOTICE Having hatched all the chicks that my winter houses will accommodate I will sell eggs from my best birds after May 10th for \$3 per fifteen, \$5.50 per thirty, \$10 per sixty and \$15 per hundred.

Chas. V. Keeler, Box 900, Winamac, Ind.

ROOT BROODERS

BRING SUCCESS

NO poultry appliance is more important than the brooder. On it depends the life and growth of the chicks. And no poultryman's success is certain if his work is handicapped by faulty, inadequate brooders—brooders that do not do their work well, no matter how hard you work. Indeed there is a big difference in brooders—the chicks show it. But there is no question about the "Root." When I started out nine years ago to make the "Root" I said that it must be right before we would place it on the market, and it was. The following letter tells the story—it is a story well worth while:

GALA POULTRY PLANT

Breeders of the Established
Gala Strain of Standard
Bred-and-Bred-to-Lay White
Wyandottes.

Benton Harbor, Mich., Apr. 10, 07

The Root Incubator Co.,
Cleveland, Ohio.

Your kind favor of the 5th inst. to hand and I am glad to learn that you are about to place on the market a new colony coop. If it is as practical as your Root Brooder it is sure to bring success.

Here is a record of the results that we have had with the Brooders this year: On March 7th we took off our first hatch; we placed 74 of the chicks in one of our No. 2 Root Brooders, the rest were put in other styled machines. When the chicks in the "Root" were five days old they weighed just 16 lbs. We weighed the lot again on March 19th and they weighed 40 lbs., 20 ounces, and again this morning they weighed just a little over 91 lbs. In the whole lot we have only lost 3 chicks thus far. This is the most remarkable record that any brooder has made on our plant in all the years of our experience.

In regard to the chicks placed in the—and—brooders, well they haven't developed near as fast and the death rate has been over 13 per cent.

Send us eight (8) more of your Out-Door, 100 chick capacity machines. Check attached herewith.

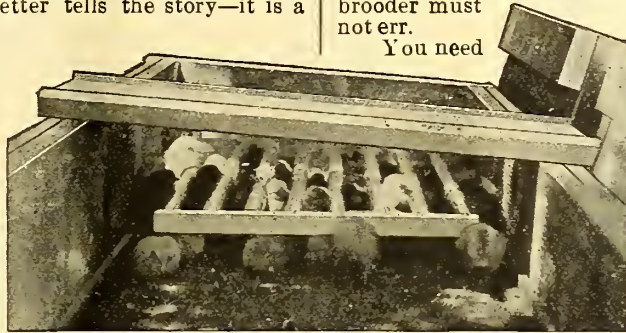

Very truly yours,
Fred J. Wehrmeyer, Mgr. GALA POULTRY PLANT.

This letter gives a record of the results of a competitive test. It tells what Root Brooders are doing on one of the biggest money making plants in the west.

NOTE—When ordering be sure and state what style machines are wanted, whether Indoor or Outdoor, your order will be shipped the day it is received or day following.

It tell the story of success. And YOU can do as well. The same rapid growth can be made on your farm. You can figure your profits on the same basis, for Mr. Wehrmeyer's record does not surprise me. I knew that Root Brooders would bring sure results for they give the chicks the same warmth by CONTACT that they get from the hen, and allow an unobstructed current of COOL, FRESH air at all times. And these are the conditions that are so necessary to the chick's life, activity and growth, they are NATURAL conditions.—Such a brooder must succeed for Nature does not err.

You need

95 chicks in a 100 chick capacity Root Brooder. Price \$12—freight paid

with the assurance of fair play. Prices:

40 Chicks (In-Door or Out-Door)....	\$ 8.00
100 Chicks (In-Door or Out-Door)....	12.00
150 Chicks (In-Door or Out-Door)....	15.00

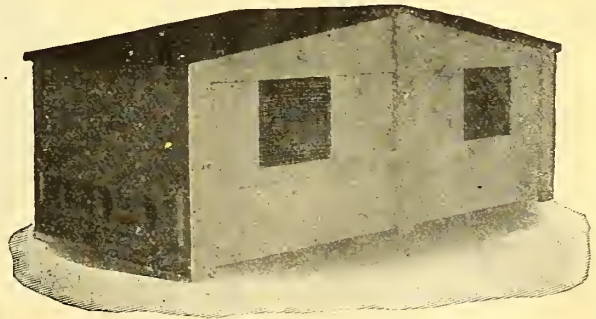

These prices are not marked up for the purpose of quoting discounts and are exactly what the machines are worth. They include the payment of freight in U.S.A.—as Root Brooders are shipped freight paid. And remember, we guarantee the "Root" to be all we say (you be the judge) or the machines may be returned at our expense and your money refunded in full. That makes a fair offer, doesn't it? Our complete Brooder Catalogue is Free.

THE ROOT COLONY COOP—Something Practical

The Root Colony coop contains some new and practical features not found in other coops of this class. I am proud of these novel features and they make the "Root" by far the most successful colony coop ever placed on the market. The ordinary coop does very well as a house for the chicks, but the experienced poultry man knows that just a "coop" is most unsatisfactory—chick nature demands more. And as a result the chicks are bound to crowd.—That means over-heating at night and a chill in the morning. What is more dangerous? It is the cause of half-grown chicks "going off their legs", of colds which may develop into roup—of slow growth, which means dwarfed, stunted fowls, instead of vigorous, sturdy stock that make good layers and breeders. Think of the cost of losing your chicks after they have been so well hatched and so carefully carried over the critical period? And yet this is the aggravating experience of many a poultry grower and all because the youngsters crowded. But these little fellows are not to blame; it seems their nature to huddle together. The fault lies in the ordinary colony coop. The "Root" was made to correct this fault and does it.

In the Root Colony Coop the chicks roost upon slats. Directly below these slats is a $\frac{1}{4}$ inch mesh wire screen, and the slats and screen are elevated from the floor so as to allow for a dropping pan. The droppings fall through the screen into this pan and it can be removed and cleaned in a moment.—The "Root" is a cleanly coop.

This picture shows why the air in the coop is always fresh and continually changing. (See the openings at the end.) It shows how much light and sunshine is admitted. It shows its general appearance, but it cannot show of what good materials it is built. Our FREE CATALOGUE tells this; also explains the non-crowding plan in detail and gives illustrations.

THE ROOT COLONY COOP, Size 3x6 feet.

It tells the advantages of Individual Coops, rather than the long house system and will interest YOU. It is Free. Write for your copy to-day.

GUARANTEED
BEST HATCHER

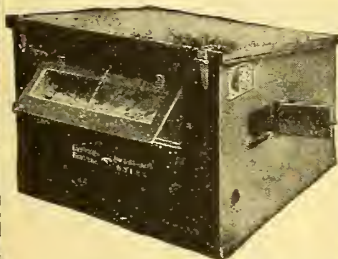

240 and 390-Egg Standard Incubator (made in two sizes) possessing every patented improvement including chick drawers and drop-bottom.

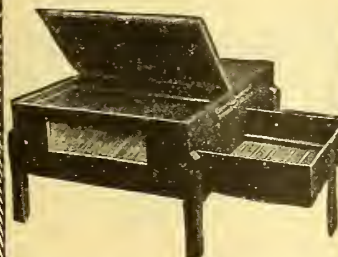

Cyphers Self-Regulating Combination Colony Coop and Outdoor Brooder, 6 ft. x 3 ft. Heat automatically regulated as in an incubator.

Cyphers Unequalled Style A Outdoor Brooder, 6 ft. x 3 ft. Superior light and ventilation. Larger and better even than last year's well-known type.

Cyphers Storm King Outdoor Brooder, 3 ft. x 3 ft. Just as good but smaller.

Cyphers Improved Hygienic Indoor Brooder and Chick Run, 3 ft. 6 in. x 2 ft. 8 in. Diffusive ventilation, double diaphragm roof. Patented principle.

CYPHERS INCUBATOR COMPANY MANUFACTURERS OF INCUBATORS BROODERS ETC. EVERYTHING FOR POULTRY-KEEPERS

THE BEST BROODER IS NECESSARY TO YOUR SUCCESS

It seems foolish to go to the trouble of hatching chicks and then "lose out" in the brooding of them. Many people are unsuccessful in raising poultry just because they think it is "all in the hatching" and that chicks can be raised in any old brooder. The tender life of the newly hatched chick cannot withstand the ill effects of drafty, cold, poorly ventilated, poorly heated brooders—that is why Expert and Successful Poultrymen Use and Recommend

THE GREATEST OF ALL BROODERS— "THE CYPHERS" MADE IN FOUR SIZES—FOUR STYLES

Just as we guarantee our incubators to hatch larger, stronger, healthier and more chicks or ducklings than any other make, so have we the evidence that our brooders will raise more and stronger chicks than other makes. For example—Read the following extracts from letters recently received:

"The Cyphers Brooder has 'smashed all records.' Out of fifty Barred Rock chicks which we put into it we raised forty-eight to maturity. Out of another lot of fifty Buff Plymouth Rock chicks we raised forty-seven. This brooder stood out of doors under a simple shed roof, without any front, back or sides and was therefore exposed to all kinds of weather."

A. C. HAWKINS, Lancaster, Mass.

"The chickens hatched in your incubators and reared in your brooders are so thrifty that in less than three weeks two brooders are required for the chickens taken from one incubator."

MRS. F. E. McKEEL, New Brunswick, Can.

"The Style A Brooder is an ideal device. I had it out in all the cold and rainy weather (and it rained almost every day) in February and March, and the chicks were as comfortable as could be. I have not had a diseased chick in all that have been hatched thus far."

STEPHEN BARKER, Gilroy, Cal.

"In my opinion, the Cyphers Incubators and Style A Brooders are simply perfection and I have not lost a chick. The Cyphers Chick Food is the only food and I shall use no other from now on. The chicks have more than doubled in size in three weeks and I would not take \$50.00 for them today."

W. A. MOORE, Reno, Nevada.

White Plymouth Rocks

Fifteen eggs \$2.50, thirty, \$4.50, forty-five, \$6.00, one-hundred, \$10.00.

C. C. FAIRBANK, Box A, SAYBROOK, CONN.**S. C. BROWN LEGHORNS** NON-EXCELLED STRAIN

Eggs for hatching from winning stock. Eggs that are fresh and fertile, from stock that has won at Iowa State Fair, Cedar Rapids, Davenport and Chicago. Eggs \$1.50 to \$3.00 per fifteen, \$5.00 per hundred. Mating list free.

A. E. BANTA**Box 23, Wheatland, Iowa****Ring's White Rocks**

Four 1sts, a third and fifth, at Chicago on five entries, nearly a clean sweep at Detroit, and again at Chicago with more prizes than all the competitors, including Silver Challenge Cup for best display. Every one of the above winnings made with birds of my breeding. It settles the question of their top notch quality beyond dispute. The winnings of my customers furnish additional proof of this quality, and convincing evidence of the value and treatment given for their money. "Hendryx" 96%, the highest score ever given to a White Rock cockerel in competition, was raised from eggs bought of me last season and now heads my first pen. His sire heads another. My customers get the best I have, line bred through generations of winners at the largest shows, and are enabled to win in the strongest company. Send for my mating list and special prices this month. Bargains in stock of both sexes.

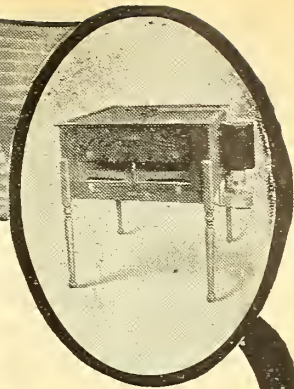

CHAS. H. RING, R. F. D. DECATUR, MICH.**GOLD IN THE GRIT BAG**

Here is what the miner would call "pay dirt" for it will put money in the poultryman's pocket. It's nature's own product made from the natural rock and ground to the proper sizes for feeding all kinds of poultry.

LOPEZ GRIT

contains valuable mineral properties which enter into the fowl's system and assist the digestive and egg-making organs in the production of eggs and vigorous growth. Turkeys, ducks, chickens, geese, little chicks and pigeons thrive on it. It's a most economical and profitable grit; just what you are looking for, 50 and 100 lb. bags. Car load lots if desired. Send for free sample. Agents wanted.

LOPEZ SANDSTONE CO., Box B, Wilkes Barre, Pa.

MODEL

Incubators and Brooders.

C Commercial poultry raising without incubators and brooders would be like trying to carry on transcontinental traffic with a prairie schooner.

Buying your incubators and brooders of a manufacturer who does not know the poultry business would be like buying a watch made by the town blacksmith.

I manufacture and sell Model Incubators and Brooders, but I also use them, use large numbers of them; in fact, am the largest poultry raiser in the world.

C At the Model Farm I have more growing chicks than any other five poultry farms. This is a Commercial Poultry Farm—a poultry farm that is a money-maker. Am working in a large way, and accomplishing some things heretofore not attained.

I am now raising thirty thousand layers. The Model Incubators are producing splendid hatches. Most of the 30,000 layers will be grown in Model Colony Brooders. The large brooding systems which hold fifty thousand chicks will be used at their fullest capacity, raising broilers and roasters, but for laying stock no other brooder will grow such a vigorous bird, and in so large percentages, as the Model Colony Brooder.

C The Model Equipment will hatch and rear chicks for you in profitable percentages. Poor hatches make low profits,—too many dead chicks, a dead loss. **Model Customers Increase Their Flocks,** and have successful years. Why not you?

I know the poultry business, and have proven my knowlege. I made the Model Farm pay running expenses and show a handsome profit in the first six months. The successful results I have accomplished for myself, and have helped others to, I can help you to, whether your plant is large or small. In buying the Model Incubators and Brooders you buy a claim on my time, and I will stay with you until your plant is a Commercial Success.

Send in your order now! I will make prompt shipment by fast freight.

Catalog mailed on request.

OAKWOOD POULTRY FARMS

MARSHALL, ILLINOIS

There's Money in Poultry

Not everybody makes it, but not everybody uses good judgment in outfitting for the business. Don't expect to make money out of poultry if you cannot hatch dependably, at all seasons, in all climates, under all conditions, upwards of 90% of your fertile eggs. Not all incubators will do this. Show your good judgment by selecting one that will.

Raising all the chicks you hatch is just as important. Just any sort of a box for a brooder will not do. See to it that you get the best possible substitute for the hen to mother your chicks.

You will start out right in the poultry business and go a long ways toward assuring your success if you outfit with

SUCCESSFUL Incubators and Brooders.

They are machines that have been proven. Many thousands have been in use for many years. They can be relied upon for uniform good results. Every user testifies to their perfect self-regulation, their dependableness and their uniform good results under all conditions.

Successful Incubators and Brooders for years have been, and now are, sold with the positive guarantee that, under like conditions, they will hatch as many and as strong, vigorous chicks from a given number of eggs, and will brood as many to maturity, as any other incubator and brooder in the world.

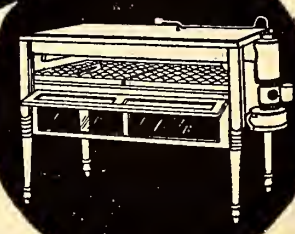

This guarantee protects you. Start right with proper machines. Incubator and Poultry Catalogue Free. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

No. 2. 232 Egg CORNELL INCUBATOR.

Cornell Chick Machinery

CORNELL INCUBATORS Portable Poultry Houses PEEP-O'-DAY BROODERS

If you are a beginner in the poultry business it is important that you start right in order to secure the best results. We start you right. We have thousands of testimonials in our files. Here are a few samples:

Twenty-Seven Years' Experience

Minisink Farm Company, E. Stroudsburg, Pa., Aug. 8th, 1906.
Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—Yours received and in reply to how I like the Peep-O'-Day Brooder, would say that I have used it three seasons in company with many other different makes, but **it always comes out ahead**, with the best chicks and the largest number; easiest to operate and keep clean, and properly ventilated and well built. I have been in the poultry business twenty-seven years.
Yours truly, GEO. T. GOODE, Mgr.

100 Per Cent of Turkey Eggs

Romulus, N. Y., October 1st, 1906.
The Cornell Incubator Mfg. Co., Ithaca, N. Y.
Dear Sirs:—I have operated a No. 2 Cornell Incubator the past season and consider it a **perfect machine**, being particularly pleased with its hatching 100 per cent of fertile turkey eggs. I am perfectly convinced that if people fail with a Cornell, it is due either to a lack of common sense or proper care on the part of the operator.
Yours truly, EMMA L. VAN VLEET.

First Experience 85 Per Cent

Orlando, Fla., September 15th, 1906.
Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—Have had but one season's experience with an incubator—a No. 2 Cornell. I had from **75 to 85 per cent hatches**, which I think very good for one having no previous experience.
The **regulator works fine**, in fact could not work better, as it keeps the temperature just right. The table top is a great convenience in testing and cooling the eggs and also as a protection for the regulator.
I also have a No. 2 Peep-O'-Day Brooder. **Am well satisfied** with both incubator and brooder. Wishing you continued success, I am.
Yours very truly, H. E. RACE.

Better Percentage, More Even Temperature, Less Oil

Belle Vista Poultry Farm, S. C. B. Orpingtons, Paw Paw, Mich., Oct. 22, '06
Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—It gives me pleasure to inform you that I have had splendid success with your No. 2 Standard Cornell Incubator during the past season. I find that I get a **better percentage of hatches, a more even temperature, with less oil** to operate than another make I have. The chicks are healthy, strong, and all that could be desired by the most exacting poultryman. It is sure to hatch all the fertile eggs. I consider it nearest to Nature's methods.
Very truly, R. F. WALTON

Fifteen Years' Experience.

Coniscliff Poultry Farm, L. B. 19, Tenafly, N. J., Aug. 7th, 1906.
Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—The season just ended was my first season running a Cornell machine, and to say that I was pleased with the results would be a mild way of expressing it. I have been operating incubators for over fifteen years, but I have yet to see a machine that is **so easily regulated** and holds the temperature to a fraction of a degree like the Cornell; it is a safe assertion to make to say that anybody who has "horse sense" can operate them successfully. My hatches for the season **averaged over 90 per cent**.
Yours very truly, NORBERT K. PENDERGAST.

Best Results From Cornell Machines

Sidnaw, Mich., October 3d, 1906.
Cornell Incubator Co., Ithaca, N. Y.
Gentlemen:—Your letter of the 27th is received. We had two other makes of incubators working alongside of the Cornell and got the **best results from your machine**. I have just completed a poultry house 576 feet long, and will endeavor to get a picture of it for you within two or three weeks.
Note:—We have, since the above, equipped Mr. Prickett's plant with No 3364-egg Cornell and Peep-O'-Day Brooders.
Yours very truly, WALTER S. PRICKETT.

200 Prize Winners From Peep-O'-Day Brooders

Annapolis, Md., October 11th, 1906.
Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—I have used your Brooders for the past six years and have found them so successful that I have no thought of any other. My chicks raised in the Peep-O'-Day have won me over 200 prizes. The heating and ventilating system of your brooder is so perfect that I have no trouble to raise healthy, strong fowls that weigh over standard weight.
Respectfully yours, C. H. STAUNTON.

Simply Fine and All That We Claim

White Lake, N. Y., September 15th, 1906.
Cornell Incubator Mfg. Co., Ithaca, N. Y.
Gentlemen:—I take great pleasure in recommending the Brooder Colony Houses you manufacture. Last spring it seemed almost impossible for me to raise my chicks in the long piped brooder house that I used for several seasons with very fair success. When I heard of your Brooder Colony Houses I ordered fifteen of them from you. They are **simply fine** and do all that you claim for them, and I think it more than likely that I shall order some more of them from you next spring.
Yours truly, The Sloane Farm Egg and Poultry Co., R. F. Sloane, Treas.

We are anxious to assure your success; we can and will, if you will favor us with your order for 1907 Standard Cornell Incubators and Peep-O'-Day Brooders. We make immediate shipments, all orders being filled promptly upon receipt of same. Our complete 1907 catalogue contains a mine of practical poultry information, fully illustrating and describing the complete line of Standard Cornell Chick Machinery. A copy will be mailed you **FREE** on application. Ask for it today.

OUR SILVER JUBILEE

Shipments made same day order is received.

This year marks the Silver Jubilee of the "Reliable" Incubator. For twenty-five years they have stood the severest tests under all conditions, and have demonstrated that Reliable machines are thoroughly practical and satisfactory in every respect. Today, the demand for Reliabilities is greater than ever. They are scientifically constructed along the most practical lines. They employ those principles of hatching which have been proven to be correct. The double heating system, perfect ventilation, even temperature and the absence of draughts produce the highest possible number of chicks from any given quantity of fertile eggs. The **Reliable Incubator** is cheaper to operate, requiring one-third less oil than any other. We guarantee it to do as we claim or money refunded. Silver Jubilee Catalog free. Get our prices on pure bred poultry and eggs.

RELIABLE INCUBATOR & BROODER COMPANY, Box A-1, QUINCY, ILL.

Price \$2.50 per 100 lbs. everywhere

Who Is The Judge?

This feed will raise more chicks, better chicks, stronger chicks and quicker and costs no more. If your store keeper does not handle the Steinmesch Specially Prepared Chick Feeds, write us. On all orders for 200 pounds or more, we will pay the freight to any part of the United States.

STEINMESCH'S Extra Quality CHICK FEED

is prepared entirely with a view of offering poultry raisers the very best feed for the rearing of chicks. A practical experience with chickens for 20 years, backed up with the experience of the best authorities in the country on raising chickens, justifies us in saying that no chicken feed is complete without grit. **No balanced ration for poultry is complete without grit**—we use the very best grit that money can buy—5 pounds of grit to 100 pounds of feed. We use pin-head oat meal, cracked grains and seeds, beef scraps, bone, charcoal, etc. 20 different kinds. Our feed is free from dust and dirt. It is all feed—no waste—therefore, economical, and chicks if properly fed will eat every particle of it, including the grit. We sold 1,000,000 pounds last season and we are going to sell 2,000,000 this year. It is used by William Ellery Bright, Waltham, Mass., the Barred Plymouth Rock and S. C. Brown Leghorn King of the Country; by O. L. King, Walnut Grove, Ill., and R. W. Wales, Iowa City, Iowa the Barred Plymouth Rock Kings of the West; by Mrs. Della Maxwell, Fayette, Mo., who has won more and larger prizes on Barred Rocks than any other lady in the country; by J. A. Vannatta, Vandalia, Mo., the S. C. White Leghorn King; by C. A. Morton, St. Louis, and Henry P. Mason, Fayette, Mo., the Buff Rock Kings of the West; by Bruce Bros., Crescent, La., and H. W. Blanks, Columbia, La., the biggest poultrymen in Louisiana; by William Miller, Crescent, Mo., the White Rock breeder, who paid \$1750.00 for 7 White Rocks; and by hundreds of poultry fanciers and experts who cannot be fooled with the feed that contains no grit. Over 500 dealers are handling the Steinmesch Extra Quality Chick Feed. If your dealer is not one of them, give us his name or send to us direct and we will ship promptly, and on an order for 200 pounds or over at a regular price of \$2.50 per 100 pounds, we will pay the freight to your door—any part of the United States. Send for our catalog of other supplies anyway. It is free. Every chicken man ought to have it. We are general Western agents for the Cornell Incubators, Peep-o-day Brooders, Mann Bone Cutters and Empire Coops. We have 1,000 head of fancy poultry on our farm, all varieties. We sell eggs for hatching. Every good thing for the poultryman—Steinmesch has it. Address,

STEINMESCH FEED & POULTRY SUPPLY CO.,

No. 301 Market St., St. Louis, Missouri.

WINNINGS WON BY DUSTON'S WHITE WYANDOTTES

The story of the winnings this season would occupy a good share of this paper this month. A pair sent out to compete at a BIG show won 1st ckl., 1st pullet and silver cup for whitest bird. Another ckl. and hen won 2 firsts, beating out celebrated winners of two other shows that had been sold for big money. My policy is well known, that I do not tell where my birds win; according to my custom I show a few testimonials—FRESH ones.

New York, Feb. 21, '07.

Dear Sir: Beg to advise that the two hens arrived and am very much pleased with them indeed. Have three good pullets from setting purchased of you last season, which gives me quite a nice little flock, etc.

Oregon, Jan. 31, '07.

Dear Sir: The cockerel arrived January 23rd O. K. Please accept thanks for your choice selection, etc.

West Virginia, Feb. 18, '07.

Dear Sir: It will certainly interest you to learn how the ckl. fared at — show. He scored 94 by T. E. Orr—1½ points more than 2d ckl. My winnings were 1st ckl., hen and pen, 3rd pullet, 2nd cock. It is useless to tell you that I am more than pleased, etc.

New Jersey, March 1, '07.

Dear Sir: The bird reached me yesterday in good condition, and I want to say that he is in every way satisfactory, and indeed as fine a cockerel as I have ever had in my yards, if not the finest. I wish to thank you for your kindness and the treatment I have received at your hands. I shall be glad to have my friends meet you.

Pennsylvania, Feb. 4, '07.

Dear Sir: Am pleased to say the pen won 1st at —. I am delighted, etc.

Rhode Island, Feb. 4, '07.

Dear Sir: I am pleased to say that the ckl. which you shipped me arrived in —, in due time. He certainly is a better bird than I was ever able to buy for double the money, and I thank you for making the selection for me, etc.

A NEW YORK PRIZE WINNER BRED AND OWNED BY
ARTHUR DUSTON, MARLBORO, MASS.

New York, Jan. 18, '07.

Dear Sir: I thought I would wait until after the — show before I wrote; it closes tonight. I won with the cock here and at —, the judges at both places pronounced him as fine a cock as they ever saw and were surprised I got as good a one for \$25. I am more than pleased. Judge — scored him 95½ at —; there were 25 cocks in the class. He said he was so far ahead of the 2d cock that there was no comparison. The judge at — was inclined to "knock" you a bit. I let him go as far as he liked, then called him over and pointed out the cock and told him that he was direct from you that day. Well you should have seen him wiggle and scratch; he didn't know what to do or say to square himself. We all gave him the ha ha in a quiet way. He has been a good ad for you. Thanking you for the bargain you gave me, I am, Sincerely yours,

Ohio, Feb. 20, '07.

Dear Sir: Our birds were received last evening and in good condition. We are delighted with them; find them beautiful. Thanking you sincerely, we are

Yours very respectfully,

Ohio, Jan. 19, '07.

Dear Sir: Would like to state that the ckl. purchased of you last May has won several firsts for me at different shows, such as our own in a class of 35 cockerels.

Stoneham, Mass.,

Dear Sir: The pullet that I bought of you proved to be a wonderful layer. She laid 57 eggs in 60 consecutive days, laying the last 35 in 35 days. Her eggs were nearly all fertile, etc.

Yours truly,

L. L. Gove.

These tell the story of Duston Quality, and I can duplicate by dozens since the first of January. If you want THE goods you can be sure of it if you send to the breeder who has made possible "The World's Best Flocks." 4c stamp for catalogue. EGGS: 1 set \$5, 2 sets \$8, 3 sets \$10, 5 sets \$15 and \$20 per 100

BUFF WYANDOTTES

During the past ten years exhibiting at New York, Boston and Pan-American we have won 31 1sts, 20 2ds and 16 3ds prizes, averaging three 1sts and two 2d prizes each time exhibiting, more than all competitors combined. At New York, Jan., 1907, we won 1, 6 eklus, 1 pen, 3, 6 cock, 3, 4, 5 hens, 3 pullet, and the 1 pullet, 2d eklus we purchased. Thus as usual we brought home three out of five first prize winners, all of which are in our yards today. Annual public demonstrations in America's leading exhibitions fully demonstrate the great merit of our strain beyond anything we can add or competitors detract from. We are, and have been since the origin of this breed, producing good goods at reasonable prices for stock and eggs.

Young's Strain of S. C. W. Leghorns I Have No Other Breeds

Winning more prizes in the last seven years than all others combined at the world's greatest show, Madison Square Garden, New York, is positive proof that I have the grandest strain of Single Comb White Leghorns in America. Not only has my strain won the highest honors for myself, but it has also won for my customers in almost every show, large and small, in the United States and Canada. My winnings at Madison Square Garden, 1907: Cocks, first, second and fifth hens, first and third; cockerels third; pullets, first and third breeding pen, second; fourteen cash specials; and for the third and last time the American Leghorn cup for best cock, hen, cockerel, pullet and pen.

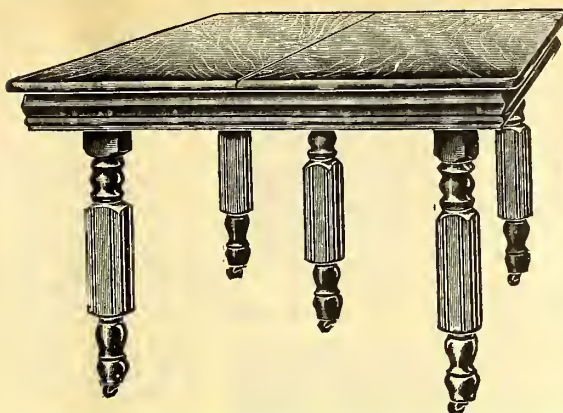

Stock and eggs for sale at all times. 1907 mating list free.

This elegantly designed and finely made Dining Table contains nothing in its make up but solid golden oak; the workmanship and finish are unsurpassed in their excellence. Six Foot Given Free with a \$10 Assortment of Groceries and other Products.

The Roosevelt Comfort Rocker. Very stylish finely figured quarter sawed oak, veneered seat, finished golden. The most beautiful and comfortable rocker ever Given Free with a \$10 Assortment of Groceries and other Products.

An Easy Way

When you purchase \$10 worth of groceries from your home merchant a number of people have had their profit and expenses added to the actual cost of the goods after they left the manufacturer and before they reached you, which you pay. When you purchase \$10 worth of groceries and other products from the manufacturers you pay no merchants' profits and expenses—you secure the goods at actual manufacturer's cost.

This accounts for the fact that we can give you your choice of \$20 worth of products, usual retail value, without premium for \$10. Or we give you \$10 worth of products, usual retail value, and a \$10 premium both for \$10. We pay the freight by enclosing extra goods to cover freight charges. Every article and every premium is guaranteed to give satisfaction or money refunded.

AMERICAN STANDARD OF PERFECTION

OFFICIAL GUIDE TO POULTRY CULTURE
Latest Revised Edition (1906)
304 PAGES; 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
WORK ON THE TECHNICAL POINTS OF
STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
MORE THAN THREE THOUSAND DOLLARS

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

a. A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.

b. The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.

c. Instructions to judges and the official "cuts for defects"—invaluable information for every exhibitor who wishes to be successful.

d. The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world's best poultry artists, and were revised and approved by members of the A. P. A. at a four-days' session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

THE AMERICAN STANDARD OF PERFECTION IS AN INDISPENSABLE

Walworth, Wisconsin

Winter Eggs. How To Get Them.

Are you getting any eggs this winter? If not let us show you where the trouble lies. While you are keeping chickens through the winter you may as well make a profit on them. Our method makes them more than pay for their feed in eggs, even when grain is high and green food scarce. Everybody's chickens lay eggs in warm weather. We show you how to get eggs in winter, even from late hatches—and you can prove it at our expense. You know that some fowls lay eggs all winter. If yours don't, why not find out the reason.

Coop poisoned fowls cannot lay eggs at any time, neither can a sick fowl. With our method fowls are kept absolutely free from lice, colds, roup, diarrhea and cholera. We have something for coop poisoned flocks, too. We show you how to get weight and size in exhibition poultry, and how to raise all little chicks and turkeys that can be hatched. We can help you, but you must write us first. Send a postal card today. We will send you free receipt by next mail.

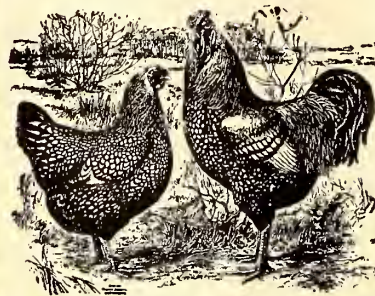

CHAS. SCHILD CO. - Box 14, Station C, CLEVELAND, OHIO

DALLEY & DOUGLAS

THE BEST IN WHITE PLYMOUTH ROCKS

We will book orders for 50 settings of our best eggs this month at \$4 per setting of 15. These eggs are easily worth \$1 a piece, as they come from the finest and most prolific flock of White Rocks. If you want winning cockerels and pullets for the next season's shows, place your order this month. Our egg guarantee will more than please you. We have a few cockerels to spare at \$3, \$5 and \$10. If you are not satisfied when you receive them, return them at our expense and we will refund your money.

DALLEY & DOUGLAS, Box J, Flat Rock, Mich.

Orpingtons

BUFFS, BLACKS, WHITES. Winners continuously of the most coveted prizes at largest shows to date. The lion's share at the GREAT CHICAGO SHOW, 1907, and you can buy eggs from these 1st prize winners, the product of which will be heard from at future shows. An elaborate MATING LIST (the finest ever issued by an Orpington breeder) describing in detail the finest matings in the west, free. If you want the best and an honest deal, I can and will please you thoroughly.

C. S. BYERS

OFFICIAL ORPINGTON JUDGE

HAZELRIGG, INDIANA

COLEMAN'S S. C. BLACK ORPINGTONS

Home of the Sensational Cockerel; score 96½, by T. E. Orr. At the big A. P. A. Show, Auburn, N. Y., entered four birds, won 1st and 2d cockerel, 1st hen, 2d pullet, 2 shape and 5 other specials. At Shelby, O., Dec. 24-29, '06, T. E. Orr, Judge, won 1st cock, score 95, 1st hen, 95½, 1st chl., 96½, 1st pullet, 95, 1st pen, 191½. None better in America. Egg orders accepted now. Joe Coleman, Bellville, Ohio. Sec'y Nat'l S. C. B. Orpington Club

CRUSADER III, Universal Champion of 1907. 1st and special championship, N. Y., 1907. Bred by William Ellery Bright.

7 out of the best 10 prizes at N. Y., 1907, on males, was won by Grove Hill strain birds, including BOTH firsts. Sweepstakes for best three cockerels.

4 firsts on cockerels out of 5 at Madison Square, N. Y., during the last six years have been won by Grove Hill.

THE BEST EGGS

For Hatching Ever Sold

We Believe Will be Those Sold From

Bright's Barred P. Rocks

Brown Leghorns

For the Season of 1907

Did you notice our win at New York, 1907? Six out of ten best prizes on Barred P. Rock males including **both firsts**, champion male and color special male. Three prizes on females and two on pens. Four firsts on Leghorns tell the story.

EGGS from the same pens we hatch our winners from and no others, **\$5 per 13, \$15 per 50**, specially selected sittings to meet your needs at special prices.

From Pennsylvania's Leading Barred P. Rock Breeder

Wm. Ellery Bright, Esq.

Strafford, Chester Co., Feb. 27, 1907.

Dear Sir:—I take pleasure in informing you that every male bird but one, that won for me at Philadelphia Show was your strain, and that it has been my experience that more good birds, fit to show and breed from, can be procured from your matings than from those of any other breeder. I know whereof I write, having spent hundreds of dollars with the leading breeders for their best eggs.

Yours very truly, HENRY D. RILEY.

THE MATING OF THE BREEDS.

How to Avoid What Seems to Be a Common Error in the Mating of Rose Comb Rhode Island Reds—Some of the Fine Lines to Be Drawn in the Mixing of Colors in This Beautiful and Useful Fowl—How to Secure the Deep Red and Prevent an Abundance of Buff — E. L. Prickett Talks by the Card.

Paper No. 5—The Rose Comb Rhode Island Red.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The remarkable popularity of and demand for Rhode Island Reds has resulted in a large number of undesirable fowls of this breed being placed upon the market. We are now finding them ranging from the beautiful even red so much desired to the undesirable buff. The writer in his capacity as judge has been selected by the national club for the past two years to pass upon the Reds, both single and rose combs, at the meeting and display of the club at Cincinnati and Madison Square Garden. We have handled them in the show room in every section of the country—east, west, north and south. Each year we have noted some improvement in the breed, not a great improvement, but as much advance as could be expected. Yet the Rhode Island Red is far from what its best friends wish it to be—what it surely will be in time.

There are too many Reds shown carrying Wyandotte shape. The Red has a shape and form unlike any other fowl. Its long back and full breast with the appearance of a slight tip forward must be secured and maintained. Here is where so many Red breeders are failing. And unless type is given more attention by a majority of breeders there will not be the desired advancement in the breed.

Color is far from satisfactory. At New York and Cincinnati we found a few specimens of extraordinary merit. This proves conclusively that the deep, rich red color demanded by the Standard is obtainable, for here we found it. But so many specimens bordered on the buff with light to white undercolor. It seems especially difficult to secure hens that will hold the desired color. In pullets it is easier.

The single comb variety has so far led in the number of entries and in popular favor, so it would seem. During the past two years there has been a tremendous demand for the rose combs. It is, we believe, a demand that will continue. Upon the whole, the quality of the rose combs has not been quite as good as the single combs.

Mr. E. L. Prickett, secretary of the Rhode Island Red Club of America, one of the most prominent breeders and successful exhibitors of rose combs in America, tells us how to mate to secure the desirable color and shape. What he says as to color will apply alike to the mating of single combs. Read carefully what Mr. Prickett says:

How to mate Rose Comb R. I. Reds is a subject that has puzzled every breeder of Reds, and there are but very few who can mate up a pen and foretell what the results will be unless they know the breeding back of the birds.

It is far easier to advise what not to mate, so as this may be the means of helping some one, I will tell what I have learned from my own matings.

Type is of first importance, so don't breed from over-

grown, leggy birds, either male or female, nor yet from small, pinched up birds. Reds should be down on their legs, yet should not be blocky, but of good length of body.

Reds are strictly a practical business fowl, originated with that idea. Standard weights: Cock, 8½ lbs.; hen, 6½; cockerel, 7½; pullet, 5 lbs. When you go much above or below these weights you are getting away from an ideal Red, so in mating your birds, govern yourself by these weights and adhere to them as closely as possible. Above all things don't mate large and small birds together, but if you wish to increase or decrease the size, do so gradually, and not try to do it all in one season. Remember it is the female you must look to for type and ideal size, and to the male more particularly for color.

Do not include in your pen a lot of females of all sizes, shapes and colors with the idea of striking good results from some of them. You probably will get good results from some individual, but how will you know any better the following year which birds gave you best results?

Select your females as uniform in type and color for each pen as possible, even though you only have two to five females in the pen. In this way you can mark your chicks and keep a record and observe closer what the results are, both for type and color.

Color seems to be the difficulty to be solved. Light colored males do not give satisfactory results, for it is the tendency for red and buff breeds to run out to light buff or white. So in order to keep up color, use medium to medium dark males.

Very dark birds will produce black in surface and smut in undercolor. So avoid extremes in color, the same as you would extremes in size. Now after you have type and surface color selected, don't think for a minute that your bird is all right. Next look at the undercolor.

A male showing weak undercolor is undesirable. White in undercolor of hackle and saddle over hips is a very common defect, and a male being very bad in these sections should be rejected, as the defects will be intensified in offspring unless overcome by good qualities of female. A whitish, smoky undercolor at base of tail is also objectionable.

A slight amount of smut in a male's back is not so objectionable as some people think, and oftentimes such a bird proves a remarkably good breeder, but he must be free from white or black in hackle, saddle and base of tail. Never breed from a male defective in all these sections.

Great care should be used in mating a male showing smut in back. This smut should not be more than a slight barring across the middle of the feathers on the back, next to the web, but never to the end of the quill. The quill should always be red, not black nor white.

A male having a rich dark surface color and a smoky, whitish undercolor, even though free from pure white or smut will not prove a satisfactory breeder.

Black in wing bars is also objectionable.

What kind of a male, then, will prove the best breeder? I prefer a male having a good, strong color with a good lustre to surface plumage. What is meant by strong color? I mean a bird of good rich surface color, medium to medium dark, but the undercolor correspondingly strong and not showing much contrast.

A male of medium surface color with strong undercolor, if bred from a medium dark colored male, will often prove a good breeder.

Have as little contrast in hackle, back, shoulders and saddle as possible. If male is weak in undercolor of hackle be sure he is strong in back and saddle or if a little smut in back, be sure he is free from white or black in hackle or saddle.

For females, be particular as to type and size. More depends on them in these points than the male.

Avoid light buff females, or dark brown ones showing black in surface color and slate undercolor. Also those of a dark mottled color and those with peppered wings.

As a rule a male will moult out as good the second year as when a cockerel, but with females, very few but what fade in color as hens.

A pullet may be remarkably strong in surface and undercolor, but as a hen be badly faded. Such hens are not to be

the pullets that hold their color till moulting time are the desirable ones.

How, then, shall we mate Reds? Select a good, rich colored male with no serious defects in any section, but if defective in any section, make sure his mates are strong in those particular sections.

If he shows any barring in undercolor make sure his mates have good, clean, reddish buff undercolor.

If he is only medium in color, have the females medium dark.

Don't mate light males with light females or your chicks will turn out light buff and white and a dark male or dark females will reproduce chicks with too much black and smut, while a dark male on light females will reproduce a mottled flock.

If either male or females are a trifle too dark or light, mate to even up the color, but don't go to extremes.

If your mating has proved fairly successful, don't part with either the male or females under any circumstances. Once you get a good start, the parent stock is your stock in trade and stick right to that breeding, following up sire on daughters and cockerel on dam and her mates, provided they are the same breeding. The most successful R. I. Red breeders in the country today from a fancy standpoint are men who have followed line breeding and know the breeding of all their birds.

The most successful mating I have had is mating a rich, medium dark male having glossy surface and clean, rich undercolor with females of same breeding, having rich red surface color, the kind that don't fade, and undercolor a trifle weaker in proportion to surface, but not smoky white, by any means. This mating produced some good males and some remarkably uniform red females.

Combs, eyes, earlobes and shanks should conform to standard requirements as near as possible, the same as in other breeds.

While the Standard calls for black tail and black in sections of the wings, very few birds anywhere near fill these specifications and simply because a bird shows more red than black in these sections is no reason why he should be rejected as a breeder or show bird, provided he is good in other sections.

Look to type and general color first and let the tails and wings take care of themselves, provided they show no white, of course giving preference to bird showing black in these

WHITE WYANDOTTE.

First cockerel at Boston, 1906. Owned by Owen Farms, Vineyard Haven, Mass.

discarded if good in other points. They are good breeders.

A pullet with a good surface color and undercolor rather weak in comparison with surface color, will usually moult out good as a hen and is a good breeder.

But a pullet with good surface and weak, smoky white undercolor is no good as a breeder, although they moult out good surface colored hens.

Of two pullets, both showing fine surface color, one showing strong undercolor and the other weaker undercolor in comparison to surface, the one having weaker undercolor will moult out to be the handsomer hen.

Very few show pullets moult out into show hens, the tendency being to fade out or moult out mottled and uneven in color.

Avoid using a buff female with any smut whatever. I have seen flocks where females had not been selected for color but were mottled red and white, yet when mated to a rich colored male produce some good colored males, but it is not best to breed from such, as good birds can be mated together and give good results. There are two kinds of hens that make good breeders. One is the kind that were rich even colored pullets and held their color until moulting time, when they moulted out a lighter color as hens. The other is the rich, bright, even colored pullet whose undercolor is a trifle weaker but not whitish by any means, yet a little too much contrast between surface and undercolor. These birds are apt to moult out into rich, even colored show hens, and this kind will reproduce show pullets. I dislike a pullet whose color goes to pieces the minute she commences to lay. She will reproduce her kind, fit to show before maturity, but

S. C. R. I. RED.

Fourth Cockerel and Winner of Color Special at Philadelphia, 1907. Bred and owned by George W. Tracey, Kinderhook, N. Y.

sections if good in other points. Of two males, one showing good black tail and wings, but with weak undercolor of hackle, back and saddle, the other strong in these sections but showing more red or russet in wings and tail, by all means select the latter. He will prove a better breeder.

E. L. Prickett.

INDIAN RUNNER DUCKS.

An Article on Indian Runner Ducks that Appeared in Feathered World
 London, England, Written by J. C. Knapp, Chicago, Ill., and
 the Reply Thereto which Appeared in the same Pub-
 lication, Written by John Wilton, Secretary
 of the Indian Runner Duck Club.

Madam—I trust you will pardon my addressing you, but being an interested reader of your valuable paper, The Feathered World, I thought you might not deem it a very great intrusion. As a result, I presume, of reading so many conflicting statements, I have become somewhat confused as to the proper color of an Indian Runner duck. The English standard states the color should be fawn, or grey and white, fawn preferred. Our American standard, taken mostly from the English, reads about the same. It also states the duck should be the same color as the drake. Mr. Thomlinson, in an article recently published in F. W., says: "The duck should be the same color as the drake, except color of fawn. Each feather has two distinct shades of fawn in the beautiful lacing and penciling, and a very faint line of white dividing the two shades, especially in the overlay. The neck and breast feathers show the same penciling when handled and separated, the backs and rump being a shade richer in color, but, being covered by the overlay, are not in evidence when the duck is at liberty."

Mr. Walton, judge of Runners at the last International Show, commenting on the third duck, says: "Thomlinson, 3, a picture, rich warm fawn, and shows a lot of penciling, rare good type, etc."; and in a number of other show reports I have noticed similar comments on the winners. If it is the intention of the standards, both English and American, to have either solid fawn and white or grey and white—and it would seem so from the fact that no mention is made of lacing and penciling in the duck—why do such well-known and competent judges as Messrs. Walton, Thomlinson and others frequently comment on the beautiful lacing and penciling of the ducks? If the duck has a natural tendency to penciling and lacing, why should it be eliminated?

A Runner duck showing beautiful penciling and lacing while at liberty would be considered by many equally as beautiful and as desirable as a solid color. If the authorities cannot agree, why not agree to disagree, and have two types in the standard, one in which the duck is solid color, same as drake, and one in which penciling and lacing are required? The Indian Runner is somewhat new here in America, and as we are liable to take things literally, I should like very much to be set right in the matter. Some breeders are so intent on getting the color required, or seemingly required, by the standard, that they are losing sight of shape and carriage altogether. Only recently at one of our shows I saw a Runner (?) duck, almost a solid buff or dun and white, with a regular puddle duck shape and carriage. Having the markings of a Runner, it was entered as such, and greatly admired by many, who, of course, had no idea of the shape and carriage of a typical Runner. One of our prominent poultry artists, an acknowledged authority on color, pronounced it a buff color. However, the judge (?) referred to it as almost an Indian Runner, being, I presume, carried away by its beautiful color. I relate this instance to show the extreme to which some of our breeders are going, and the need of a standard more explicit in detail description. It is, of course, quite impossible to have a standard acceptable to all breeders and fanciers of any variety, but for some reason the interpretation of our present one is so greatly at variance that it is not what it ought to be.

I shall not intrude further upon your time, but permit me to suggest that if you would grant the space in F. W., and such well-known and acknowledged authorities as Messrs. Walton, Thomlinson, Wilson, Digby and others would give your readers their ideas concerning the points referred to, it would be of great value, and out of it all we may be able to arrive at some definite conclusion as to the proper color and markings of an Indian Runner duck.—J. C. Knapp, Chicago, in Feathered World.

Madam—In reply to your American correspondent, Mr. J. C. Knapp, of Chicago, I have pleasure in putting forward my ideas of the color of Indian Runners, after a careful study of the breed extending over a number of years.

In the first place, I have always upheld the view that the Indian Runner is essentially a bird of type, and that, no matter what color a specimen may be, unless it possesses

certain characteristics of form and carriage it cannot be a true Runner.

Therefore color is a matter for secondary consideration.

Still, it does require looking after, and as the ranks of the Runner Fancy are swelling with new recruits each year, it will be better to come to a decision in the matter and fix on one particular color as the ideal.

The color which I have always favored is a rich warm fawn in both ducks and drakes, and I think this color might very well be adopted as the ideal, as I believe it goes hand in hand with plenty of blood and true type.

When viewed at a few yards' distance birds of both sexes appear to be solid fawns; a slight mottling on the breast and backs of ducks is occasionally visible. On closer inspection it will be seen that each feather in the duck is penciled, and if a feather is extracted it will be found that the center on each side of the shaft is of a rather dull fawn color; outside of this comes a band of fawn, but brighter and warmer in tint; then another and narrower band of the same shade as the center, and lastly, the outside lacing or fringe of rich fawn.

Usually only the bright fawn outer edging of each feather

BUFF PLYMOUTH ROCK.

First cock at Madison Square Garden, New York, 1906. Owned by Owen Farms, Vineyard Haven, Mass.

is visible on the breast, flank and shoulders, unless the plumage is raised. The feathers on the back being larger, the pattern is more easily seen.

Ducks of the above color, especially old ones, frequently show a delicate line of white between the two shades of fawn on the penciled feathers of the back.

The more bright coloring on each feather the better. Sometimes the smaller feathers on the breast and shoulders only show a centerpiece of fawn, with a single lacing of brighter tint.

The coloring should be as even as possible all over—not pale and washy, except where birds have been exposed to sun and weather, and not grey or dusky.

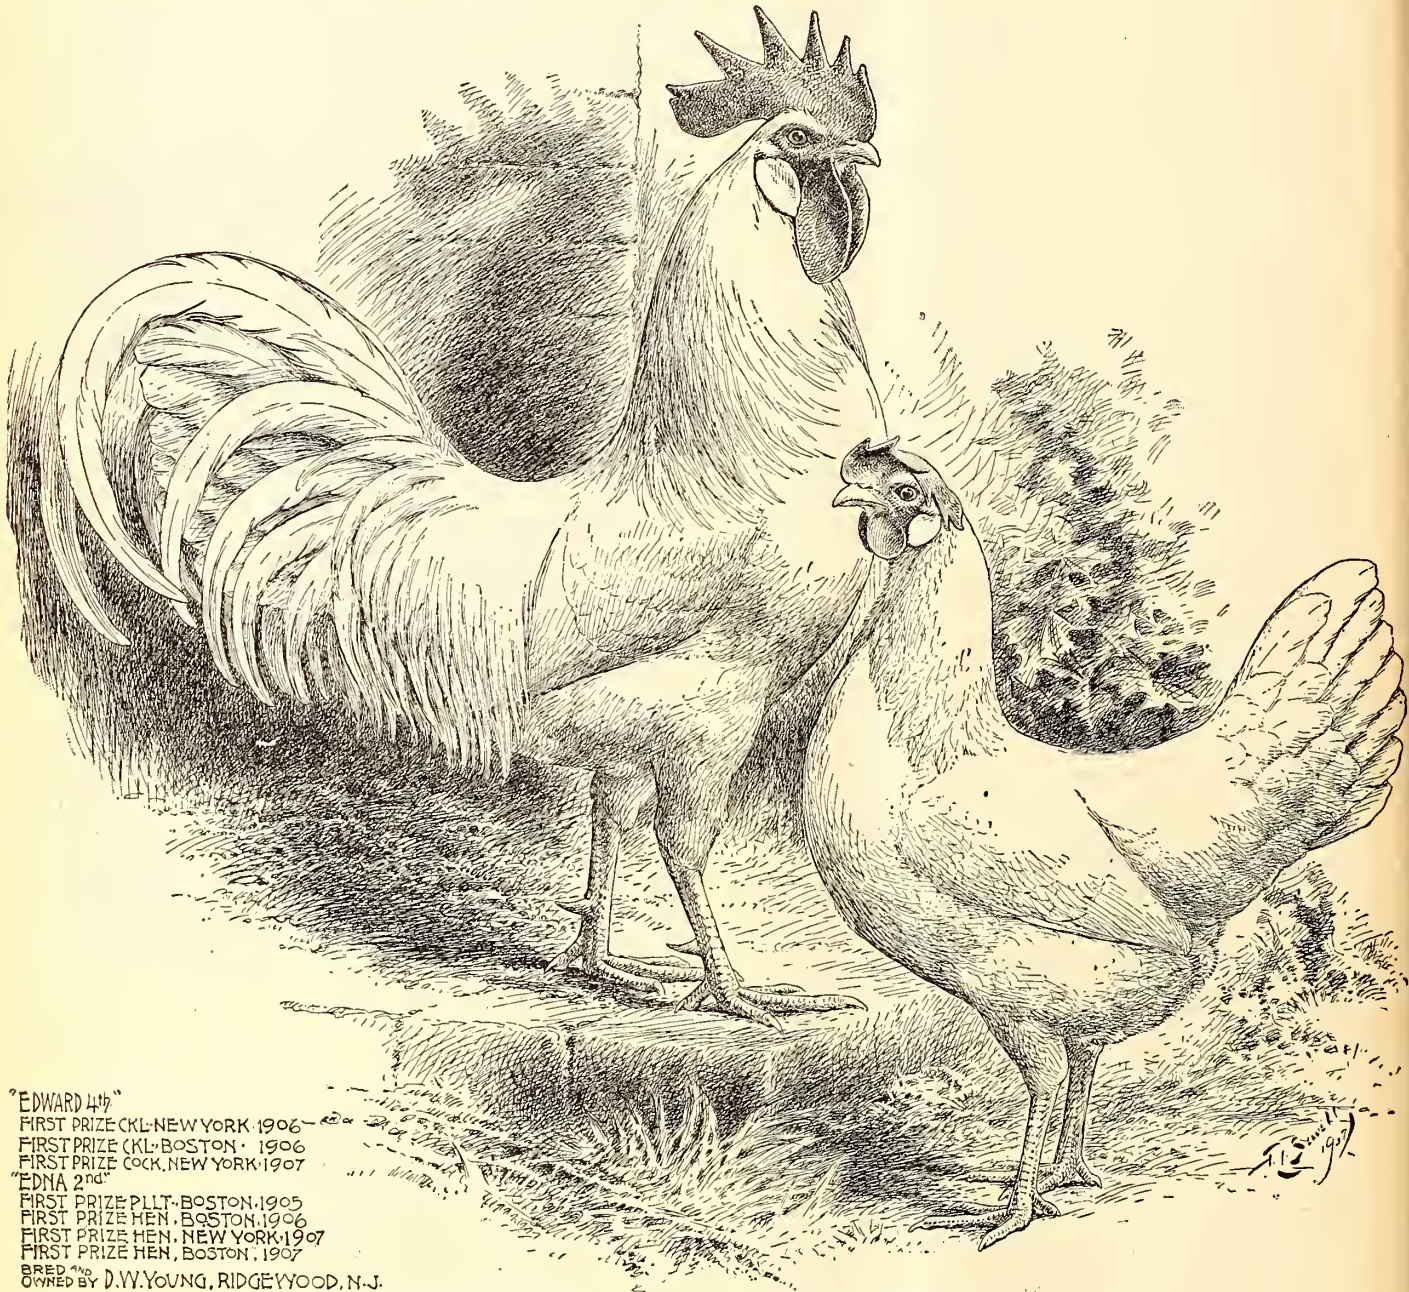

When looking over the classes at the last International Show with that enthusiastic Runner fancier from across the border, Mr. Matthew Smith, of Dumfriesshire, I found that his ideas about color tallied almost exactly with my own. "A warm ginger fawn" was his comment as we were admiring some beautifully colored specimens. I thought the definition of shade a very good one.

Certainly the color in my opinion is the most beautiful, attractive and unique, and what is of more importance it has generally been recognized as the color of the birds originally imported. The drakes to match ducks of the

above color are of a slightly softer shade, each feather having a soft mellow fawn grounding very minutely penciled or peppered with a deeper fawn. Towards the outer edge of the feather the penciling becomes less distinct, and the two shades practically merge into a soft fawn. The head markings and rump of the drake are usually a bronzy black. An Australian fancier, Mr. Gaylor, who was here two years ago, was on the lookout for drakes with fawn heads and rumps same as the ducks, but I do not know whether he was successful in finding any or not. I certainly do not care for rich green or blue-black head markings, and prefer a bronzed color. Mr. Knapp will see from the above that both sexes are penciled, but, mark you, with fawn only, of two shades, and as one shade is only a little richer than

heavy ground color, as I consider it savors too much of Mallard or Rouen blood, and points to a cross. Some of the drakes from which such ducks are bred are of a dark reddish hue on the breast and back, but when the feathers are turned up the under color is dusky and grey. The head is often green-black, and the flanks and stern show steel grey penciling. The steel grey penciled drakes I have also found throw ducks with dark ground color.

I do not think there will be the least difficulty in breeding penciled ducks, but there will be two distinct colors, light and dark, on each feather if the marking is to show up, and I am afraid that those who go in for it will have some difficulty in keeping to the Runner type. I have always found that the true fawns throw more uniformly

the other there is not a great deal of contrast, and the markings on the feathers are not very pronounced, so that I take it Mr. Knapp will consider such birds of solid color.

Now for the bold penciling. Birds which show a very distinct pattern almost invariably have a very dark ground color to each feather. In my opinion this ground is much too dark to be termed fawn. It is more of a dark greyish brown, and whether the penciling is fawn or a lighter and more clayey tint, it shows up in strong relief on the dark background. When the penciling is sharply and clearly defined the effect is very striking, but I object to the dark,

typical specimens than other variations of color. Of course tastes differ, and some may advise having several varieties of color the same as in some breeds of fowl, such as Wyandottes and Hamburgs. Some years ago I had a lot of very smart racy ducks and splendid layers with a large proportion of Runner blood in them. Amongst them were several ducks with most peculiar coloring—a slate-blue ground finely and distinctly penciled with fawn. Others varied from bright lemon to dun. They had the Runner marking more or less perfect, and were far more active and racy-looking than many of the dark-penciled types I have seen

in the show pen. With care they might have been bred up to at least a couple of color varieties of fairly decent Runner type.

I think, however, that it will be much better for Runner fanciers to breed up to the true type first. We can attend to the variety afterwards.

There were some rattling good specimens staged last season, and the correct shape and carriage are becoming more generally recognized. Besides, people are beginning to find out that the genuine Runner is one of the most beautiful and profitable varieties of waterfowl we have.

As Mr. Knapp mentions the young duck of Mr. Thomlinson to which I awarded 3d at the last International Show and my remarks on same, I may say that I placed the birds for type, shape, style and true Runner character, not penciling. Had I been faddy on penciling Mr. Thomlinson's duck must have won, as she showed a wonderful lot of rich fawn pencillings, but her ground color was too dark for my fancy.

All other points equal, I would place a warm, even fawn before a penciled bird of two distinct colors for the reasons I have stated. Of course, the correct cutting is clearly shown in Mr. Tomlinson's pamphlet on the variety (post free, 3d, from this office).

I hope Messrs. Thomlinson, Wilson and Digby and any one else interested in the variety will give their ideas, as the question of color is an interesting one, and should command the attention of all Runner fanciers. I would especially like Mr. J. Donald, Sr., to give us his ideas. No one has had a longer or more intimate acquaintance with the breed and his opinions should carry considerable weight. Most birds which have been exposed to the weather are somewhat faded in color at this time of the year; but if Mr. Knapp would care to have a few feathers taken from birds of the color I advocate, I shall be very pleased to forward same if he will send his postal address.—J. W. Walton.

Madam—In reply to Mr. Knapp's letter on this subject, might I point out that the reason for a grey color in a Runner drake or duck not being so much in favor as fawn is that the grey suggests some cross-breeding. Scientists tell

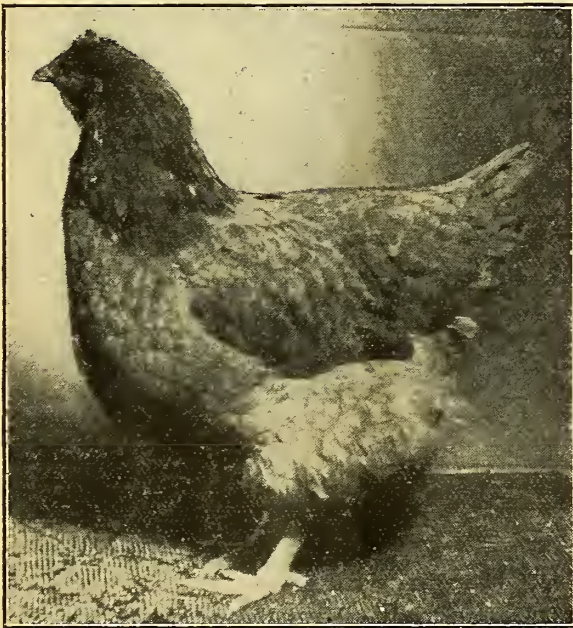

tridge Wyandotte, etc., breeders breed male birds from one pen and females from another. In the judging of Runners, however, head, shape and carriage are to my mind far more important than markings; but we live in a progressive age, and to win at a leading show it is now necessary to produce birds minus faults.

At a meeting of the members of the Indian Runner Duck Club at Wigton Show, it was decided to revise the standard issued by the Waterfowl Club, and this is being done, and

S. C. R. I. RED PULLET.

us that all breeds of ducks—and there are 180 known varieties—are descended from the Mallard or wild duck in the same manner that all pigeons have sprung from the wild pigeon or Blue Rock.

The more distinct the fawn color, the less chance there is of any contaminating ancestry or cross, as the Mallard or stem bird is himself practically grey. This, I think, is the sole reason why a fawn marking is preferred.

In ducks we have two kinds of fawn—the fawn feathers that are laced, and those self colored. I contend that when the fawn on a duck is unlaced the bird is a drake-breeder, and when laced a duck-breeder, on the same lines that Par-

when completed I shall be pleased to forward a copy to our Chicago friend. Perhaps our veteran breeder, Mr. Gibson, of Wigton, might give us his opinion on this question.—John Wilson, Hon. Sec. Indian Runner Duck Club, in Feathered World.

THE FAIRY TALES OF POULTRYDOM.

Written for American Poultry Journal by Rev. C. E. Peterson, Pembroke, Maine

There is always a time in life when the fairy tale is particularly attractive, and this time is generally the time of childhood's days, and how many of us remember when we sat listening to the impossible adventures of the prince and the goblin, but it was nevertheless in our child mind very real and very true.

Now childhood is the beginning of life, and as the writer knows for whom he is writing, and that all impossible things are accepted and treasured, he generally provides for them the things he knows will appeal to their imagination.

Now in a measure this is true in most all life's relations, for there is a childhood of science, a childhood of theology, a childhood of art, in fact a childhood of anything, and as a consequence a childhood in poultrydom, for the beginner knows little about the matter of what may be expected of poultry, and as the real thing does not appeal to him, the writers of fairy stories come forward in abundance, for it is true that there is no more an end to these fairy tales than when Shakespeare said "to the making of books there is no end."

But as the child grows into manhood, his doubts regarding the fairy tale have become a matter of fact, and though he remembers with pleasure the time when with eager mind he accepted it for truth, he knows now that all the things of life do not always end as happily as it did in the fairy tale, and it is with a lingering regret he passes from the realm of fiction into the realm of stern reality, and yet it is best for him that this transition should take place, and if it takes place without costing him too great a loss of childlike faith in humanity let him count himself lucky.

Now there are a whole series of articles that might be written on the above caption, but I shall confine myself to a few of the more modern ones, and that seem to find ready acceptance by the many children in the great, great poultry world of ours, and though I really feel sorry to disillusion

them, it will only be that I may usher them into the larger growth and understanding of the realities of the poultry world.

The Hen That Laid One Egg a Day, and Two on Sunday.

We all remember the tale about that wonderful little hen, who so faithfully performed her duty, but we never thought for a moment that our "Poultry Barnums" would really try to make this thing appear to be possible of achievement, and yet if the egg records keep on, one going the other one one better, in the near future we will certainly have the hen of the fairy tale made a seeming reality, with a number of interested supporters of the tale willing to swear to its actuality.

So far we have not quite attained to it, but we are coming, and after looking over catalogues and papers and advertisements, we find egg records of 255, 266, and the highest record so far of 280, but there must be even better records than these, for what caused us to write this article was the following letter.

March 13, 1907.

Rev. C. E. Petersen,
West Pembroke, Maine.

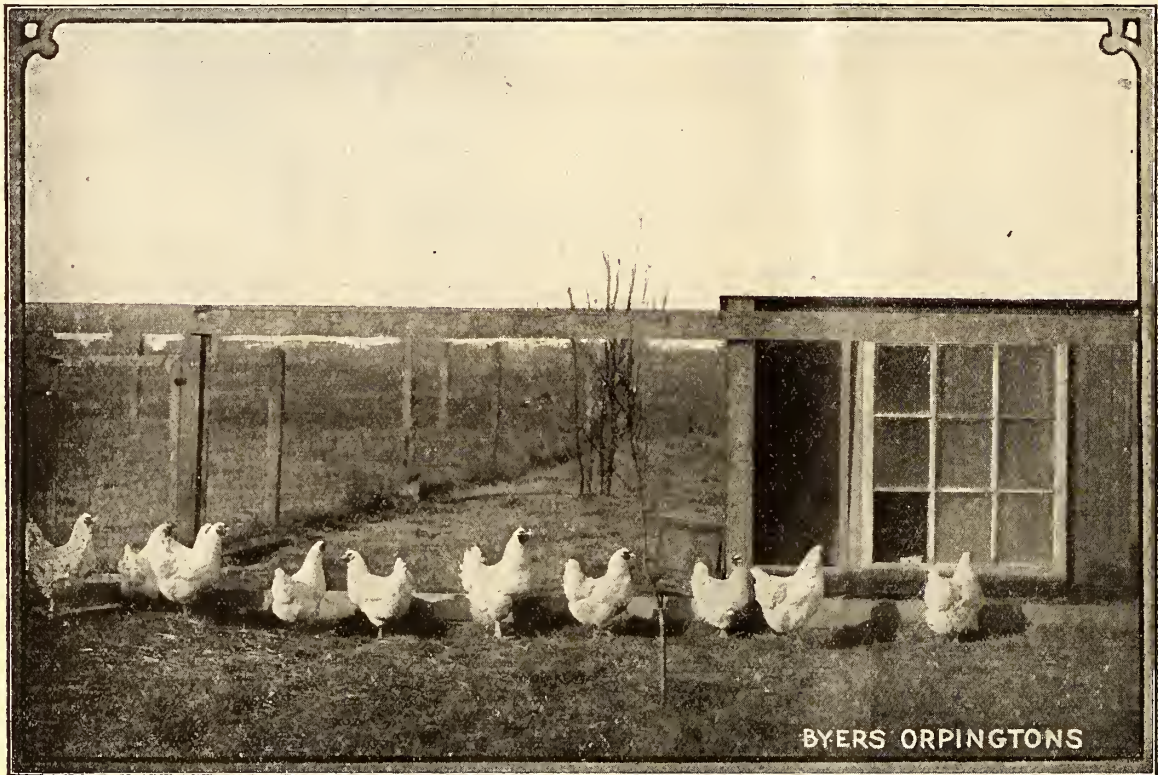

Dear Sir:

Kindly mail me catalogue of Houdan chickens and quote

But my letter to the above inquiry was never answered, at least not yet, and so I suppose he found some one who was willing to sell him a record of so many eggs per annum.

But there is a more serious side to the story and that is: That inflated records never were and never will be a benefit to the poultry industry, and as there are people who do not reason for themselves, they are gulled into high expectations and when these expectations are not realized, they turn away from an other ways excellent breed, in search for another that will fulfill the expectations, only to be disappointed again and again, until some day they awake to the fact that like the child putting out its little hands for the flitting sunbeam, they also have caught after a delusion.

Sometimes, and all experienced poultry men know this to be so, an enterprising hen will shell out an unusual number of eggs in a year, but no sensible man would judge the average laying capacity of his flock by this one specimen, and even if he selected the eggs and used them to build up an egg-laying strain with, even then there is a limit to egg production to which nature has set her seal and we can go so far and no farther.

Yard No. 1 S. C. White Orpingtons. Fully described in mating list of C. S. Byers, Hazelrigg, Ind.

price for setting of 15 eggs, from 1-year-old hens, with egg laying (trap-nest) records of 250 to 300 eggs per year.

Thanking you in advance,

I await your reply

And remain very truly yours,

J. A. S.,
Cincinnati, Ohio.

Well! this letter kind of staggered me, and I dreamt all night about all kinds of egg foods and egg producers, and about books and articles on "How to make hens lay," and got up the next morning in a sort of brown study, for I had always thought that I had an honest flock of hens that was doing good work for me, for I really had trap-nest records of a few hustlers, not of all of them, that had laid a few eggs over and above the 200 mark, but this was nothing in comparison, and if I had not then all of a sudden, remembered the pretty little story about the hen that laid one egg a day and two on Sunday, I should have turned from a brown to a blue study, but "the smile that never comes off" spread over my face, when I remembered that this little item was simply a fairy tale, well told, but a fairy tale pure and simple, and I went out and gave my beauties an extra dish of tid-bits and felt well satisfied with an honest record of a couple hundred of eggs a year.

Taking first into consideration the breeds of poultry that go broody once or more times a year, and including their molting season, we can not possibly get any such egg records as those mentioned above, and a little figuring would soon dissipate every notion of an egg record of any such proportions.

On the other hand, let us take the breeds that do not as a usual thing go broody, but there is one thing every hen does do, and that is that once a year she makes out of her system a new coat of feathers, which we call the molting period, and every authority on the subject makes this period last from eight to ten weeks, that is, from the time she sheds her first feathers until the time she completes her molt, now she may lay an egg or two or perhaps a few more, but seldom over a half dozen, before she stops laying entirely, and after her molt is completed there is a period similar to the period that goes before a pullet lays her first egg, and it is safe to say, that at least ten weeks is consumed in the completion of the molt.

Now suppose we confine ourselves to the 280 eggs a year record, and we are compelled to admit that this means an egg every single day, Summer and Winter, in all kinds of weather, and if the tale can be substantiated by placing such hens in the hands of expert poultrymen on one or more of

our Experimental Stations, I will admit, but not before, that the fairy tale of the hen that laid one egg a day and two on Sunday has become a fact.

And the man who will place one or more of such hens on any of our Experimental Stations would in a very short time make a fortune out of his flock if by certified credentials it could be substantiated that such records of from 255 to 300 eggs are based on facts.

I do not say but that the givers of these records think that they are right, but there are so many contingencies, memory is at fault and all trap nests don't work right, sometime one person will attend to them and then another, and the records are not exact, and then we have the person who, without investigation of whether records be based on facts or not, will say that they have a 280-egg strain, simply because the person from whom they got their stock said so, and we have always with us the man who for reasons of his own continues to write fairy tales.

REARING INCUBATOR CHICKS.

**How, When and What to Feed Chicks Hatched in an Incubator—
Proper Temperature of the Brooder.**

As I enjoy reading of the experiences of lady friends along the lines of raising poultry, I will try to tell in brief of my experience in raising brooder chicks. The first thing after the chicks are out of the shell, and dry, we take them to the brooder, being sure the heat is not less than 95 degrees. We never feed until the chick is about 48 hours old, then we give dry bread crumbs mixed with hard-boiled egg, and a little bit of black pepper, also. I dry the eggshell and pulverize this, and mix in feed, which I find the chicks are very fond of. This we feed for two or three days with plenty of water or milk. The chicks should be fed only as much as they can eat clean, allowing no food to be left over, as it is better to feed three or four times a day. We cover the floor of the brooder with paper, as this can easily be removed with all filth and burned, this being done every day. After chicks are a week old we make corn bread, as for table use, using pepper and egg shell for grit. This may be given three times a day, "or as often as chicks are hungry," with a little fresh meat ground fine. We always keep a small pan of grit in brooder so chicks can go to this at will. Now to the brooder we attach a box for a run, the box being four feet long and one and one-half feet wide. In this we have plenty of alfalfa litter on floor with small grain, such as Kafir corn, cracked corn or wheat thrown in, so this will give the little chicks plenty of exercise. When they are a week old we raise the small door of brooder and let them into this run, which you will find they greatly enjoy. At three weeks we begin to give potatoes, cabbage or any convenient vegetable for green food. We also find they are very fond of onion chopped fine. We never feed sloppy foods or mash to young chicks as we think this is the cause of so much bowel trouble (right here let me say I find nothing so good for this trouble as ginger tea—a teaspoonful of ginger, with a teacupful of boiling water, after cooling; you will find the chicks are fond of this. Be sure there is no other water they can get to. We give this drink often, while trouble lasts, if it appears. It will be all right to give them this drink once a week until 5 or 6 weeks old.) Keep before them plenty of grit and charcoal, and as far as feeding is concerned, the chicks will grow to be healthy and happy, if everything connected with the brooder is kept perfectly clean. After the first week we reduce the temperature of brooder to 75 degrees, and the fourth week to about 60 degrees. If the weather will not permit to turn chicks out doors, we go out and dig up clover sod, and Oh! how the little fellows enjoy this; they wheat, wheat, wheat, until every vestige of clover is gone, then we turn this over, and how they will scratch for the little roots and worms. It is a good idea to let little chicks get a bit hungry, and move around lively in search of food. As soon as we can we turn chicks that are large enough out onto the grass, i. e., where they no longer need artificial heat. Here they find ample green food and plenty of fresh air, and for exercise we dig up sod for a scratching place. Now if these points are kept in mind, and the chicks are hatched from eggs that are right, they will grow into birds that are right, and birds that we are proud of owning. In conclusion, if we start them right, keep them in the right growing condition, then when we see them a full-grown bird, we feel as though we had started right and are sure our profits will in the end be right. Yours,

Mrs. C. B. Walker.

Brownsburg, Ind.

THE GAME COCK.

Its Origin and History; Past and Present.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Maine

Cock-fighting, which is now forbidden by law in almost every civilized country in the world, at one time was the barbarous sport of these same nations, and though prohibited today by law, and everything done to prevent it, it is still very common in a good many places, though practiced under cover in out-of-the-way places like all other things evil.

The general tendency of nations, as they advance from a rude and warlike to a refined and peaceful condition, from the stage in which the realizing powers are faint and dull, to that in which they are sensitive and vivid, is undoubtedly to become more gentle and humane in their actions; but this, like all other general tendencies in history, may be counteracted or modified by many special circumstances.

Traces can be found from the very earliest periods of history, where some sort of legislation was enacted for the protection of animals, and notable among them the ox, which was a principal agent in agriculture and therefore a kind of symbol of civilization.

The old Hebrew laws are full of protective measures regarding animals and most all of them found their way into most nations, but the games in which the slaughter of animals bore so large a part did very much to arrest or retard the natural progress of humane sentiments.

In ancient Greece, besides the bull fights of Thessaly, the combats of quails and cocks were favorite amusements, and were much encouraged by the legislators, as furnishing examples of valor to the soldiers.

All of the early writers, or if not all, at least all that we know of, abound in delicate touches displaying in a very high degree a sensitiveness to the feelings of the animal world. Virgil abounds in them. Lucretius, who rarely struck a chord of pathos, draws a beautiful picture of the sorrowing and bereaved cow, whose calf had been sacrificed upon the altar.

Plutarch mentions, incidentally, that he could never bring himself to sell, in its old age, the ox which had served him faithfully in the time of its strength.

Ovid expressed a similar sentiment with an almost equal emphasis. Juvenal speaks of a Roman lady with her eyes filled with tears on account of the death of a sparrow.

Appolonius of Tyana, on the ground of humanity, refused, even when invited by a king, to participate in the chase.

Arrian, the friend of Epictetus, in his book upon coursing, anticipated the beautiful picture which Addison has drawn of the huntsman refusing to sacrifice the life of the captured hare which had given him so much pleasure in its flight.

These touches of feeling seem out of harmony with the gigantic slaughter of the amphitheater, yet undoubtedly furnished the foundation of future laws passed against cruelty to animals, leading up to the abolishment of the arena and its cruelties, and, though much later in time, to the abolishment of cock fighting, though from all the evidence I can collect the game cock suffered the longest from man's cruelty, and without the protection of any laws, in any country, furnished him with a cruel sport and pastime.

It is not easy to trace accurately the early beginnings of cock fighting; some writers go back as far as 550 years before Christ, and all they base their assumption on is that it is recorded by Palmerius that Adrastus, the son of Midas, king of Phrygia, killed his brother in consequence of a quarrel which took place between them in regard to a battle of quails.

But Herodotus, who relates the story of Adrastus, does not mention the cause of the quarrel; but the historian Ptolemy, who lived about the time of Trajan and Adrian, does, but all he states is that the two brothers quarreled about a quail.

Did any other proof exist that quail-fighting was common at this early day, it would of course furnish some evidence that this was what they quarreled about, but no such proof is to be found, and if quail fighting was common at that date, it would of course show that cock fighting would also have been known, as both are quarrelsome birds. It is, however, a well known fact that cock fighting was indulged in at a very early date of history, but a good many statements generally made and generally taken for granted to be facts, certainly cannot be proven to be so. A number of writers have quoted the well known story of Themistocles, while leading out his army, having heard a cock crow, declared it to be an omen of victory, and after beating the

enemy he instituted cock-fighting in remembrance of that event.

It is true that among the ancient the crowing of a cock was sometimes considered a presage of victory, but among all the ancient writers known, there is not a single line of support in making this incident the origin of cock fighting and must be relegated to the purely mythical, or if the author who first made use of it, Alexander, was correct in his statement, his source of information must have been utterly destroyed.

But even if this incident was founded on fact, this would simply establish the origin of public cock fighting, for there is plenty of evidence that goes to show that the Greeks knew about the use of cocks for fighting purposes at and before this incident is said to have taken place.

Another writer, Dempster, has assigned another reason for the establishment of cock fighting, which, though quoted by many, is not even supported by probability.

He conceives the idea that as the cocks came from Persia, the cock fight would be a kind of continuous trophy of their victories over the Persians.

But even if it was a fact, and which we all know it is not, namely, that the cock came from Persia, how could one Persian cock, winning a victory over another Persian cock, convey any idea of a Greek victory over the Persians?

Some very early Greek coins bear the images of fighting cocks, both in the attitude of victory and defeat, and on a lamp found in Herculaneum we have two cocks in the attitude of fighting.

Pliny gives about as full a description of fighting cocks and their importance and influence among the ancients as can be found in any writer and which I will quote in part: "Some of these birds, too, are reared for nothing but warfare and perpetual combats, and have even shed luster thereby on their native places, Rhodes and Tanagra. The next rank is considered to belong to those birds bred in Melos and Chalcis.

"Hence it is not without very good reason that the consular purple of Rome pays these birds such singular honors.

"It is these that regulates day by day the movements of our magistrates, and opens or shuts to them their own houses as the case may be; it is these that give an impulse to the fasces of the Roman magistracy, or withhold them; it is these that command battles or forbid them, and furnish auspices for victories to be gained in every part of the world.

"It is these that hold supreme rule over those who are themselves the rulers of the earth."

And this goes to show that through superstition the cock ruled Rome.

Pliny also makes mention of a substance he calls "adiantum" which was fed to fighting cocks to increase their fighting propensities.

And this brings us to the point about when and by whom the cock was introduced into England, for it is asserted that from England it was more than likely introduced into other parts of Europe, though why this should be so is not easy to understand.

It is certain that there were cocks in England in the time of Julius Caesar; but it is stated that they were kept merely for pleasure, and not even used for food.

But the question, how old cockfighting is in England, cannot be determined from the sources of information to hand.

The very first authentic information is furnished by Fitz-Stephens, who lived in the reign of Henry II. and died in 1191.

This writer relates that every year on Shrove Tuesday the boys at school brought their game cocks to the master, and the whole forenoon was devoted to cockfighting, for the amusement of the pupils.

This seems to show that the theater or cock-pit was in the school house and that the pupils seem to have had the direction of it.

Misson, in his travels in England, translated by Ozel, page 39, says: "Cockfighting is one of the great English diversions. They build amphitheatres for this purpose, and persons of quality sometimes appear at them. Great wagers are laid; but I am told that a man may be damnably bubbled if he is not very sharp." At page 304 he tells us: "Cockfighting is a royal pleasure in England. Their combats between bulls and dogs, and sometimes bulls and bears, are not battles to death, as those of cocks."

Misson died in London on the 16th of January, 1721. Another notice of the sport occurs in Poor Robin's Almanack for the year 1730: "Great consultations at the cockpit about battles, duels, victories and what not. The battles proclaimed first, and the victory afterward with a horn trumpet.

"But this hurry is not at the cockpit at Whitehall, but the cockpit at the alehouse; not about the congress at Soissons, but in Moorfields; not about the fighting of armies, but cocks; where he is a great man, and scarce to be spoke to, who fed and trimmed the cock that won, while the other contents himself with believing that his cock had beat, had it not been for this chance blow, or that accident; and this creates another cockfight.

"The loser is vexed, and this sets the men a fighting; they go to law, and sets the lawyers a fighting or scolding, till they have got the client's money."

This statement may be further illustrated by a noted little gem once in the collection of Sir William Hamilton on which stone is found engraved the picture of two cocks fighting for the possession of an ear of corn, which while they are fighting a mouse is carrying away.

A happy emblem of the lawsuits mentioned by our author in Poor Robin's Almanack.

But everywhere in England at this time cockfighting was a sport over which old and young, and rich and poor seemed to have agreed that it was all right, and a sport of which none need be ashamed.

As already mentioned, schools had their cockfights. Travelers agreed with coachmen that they were to wait a night in any town through which they passed, if a cockfight was to take place.

A battle between two cocks had five guineas staked upon it. Fifty guineas, about the year 1760, depended upon the main or odd battle. This made the decision of a "long-main" at cockfighting an important matter.

Greater sums than that were staked on a single battle mention is made of, \$5,000 a match, and the Earl of Derby in 1830 put \$25,000 on a single main. His birds are a famous fighting breed to the present day.

Cockpits existed in the metropolis of England (as they did in New York) well into the nineteenth century. Pierce Egan describes the cockpit Royal in Fulton street, Westminster, as a large, lofty, and circular building with seats rising as in an amphitheater. In the middle of it was a round, matted stage of about 18 to 20 feet in diameter, rimmed with an edge 8 or 10 feet high, to keep the cocks from falling over into the auditorium in their combats.

There was a chalk ring in the center of the matted stage, about a yard in diameter, and another chalk-mark within it, much smaller, which was intended for the setting-to when the birds became too exhausted to make hostile advances toward each other; they were then placed back to back within the inner mark.

A large and rude branch candlestick was suspended low over the mat on the nights of battle.

This description will practically suffice for all the cockpits in use at the time.

The combatants were trained same as prizefighters of our modern day, and the training extended over six weeks, through which time they were restricted to a prescribed diet, and exercised in running and sparring, so as to strengthen them for the combat.

This is seldom done to-day in Latin America, where cockfighting is as prevalent as it ever was in the early days, but sometimes ten days are used for training and deemed sufficient.

Much has been written for the excuse of the steel spur, as a means of lessening the length of combat, and making the sport, if it can be so called, less cruel, but every excuse is made in vain, where any living things are pitted against one another in brutal fight for the pleasure of the on-lookers, and the shedding of blood, that appeals to the primitive instincts, more prominent in some men than in others. Without or with spurs, cockfighting is a relic of barbarism, and perhaps a relic that has survived longer than many others, but it has seen its best days among cultured and refined classes at least, but as these are the makers of progress and civilization, the sport will die out even in the parts of the world where it is now practiced.

Civilization has been accused of being the inventor of the steel spur, but I am glad to say, that though adopted by it in its infancy, there is no doubt but that the steel spur, or to be exact, the artificial spur made out of some kind of metal, belongs to barbarism as well as a number of other inventions of cruelty, though made much more formidable weapons by modern skill.

Not all of the spurs used were made of metal, as some of them were made of bone, and of horn; the last material was used in early times for a good many utensils, and a means easily obtainable by all.

(To be Continued)

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Cora A. Cleveland, Geneseo, N. Y., and the second prize to Geo. Scott, Pudsey, Yorkshire, England.

CARING FOR THE CHICKS.

By this time nearly all this season's chicks are hatched, or at least those that will be the most profitable to us as Fall and early Winter layers. Many find difficulty in rearing the chicks properly. In some cases the cause of this may be traced to the breeding stock, which may have been run down or may have been inbred too long and closely. But invariably, the cause of chicks not growing and developing as they should, is due to improper care and feed.

If the chicks are to be brooded in the natural way, the hen and her brood, when taken from the nest, should be examined for lice. It is a good plan to anoint the top of each chick's head with a drop of sweet oil. They should then be placed in a clean, roomy coop, and placed on a clean, grassy plot, if possible, where chicks have not been reared the previous year, and where shade may be furnished when the hot days approach. The coop should be so constructed that it can be closed during cold and stormy weather, and still have proper ventilation. Holes may be cut in the sides of the coop close up to the roof and covered with wire screen. The front of the coop should have a close-fitting board front which may be buttoned in place. During warm weather a screen front may be used in place of the board front.

Many people as soon as the hen and her brood are placed in the coop think they must begin feeding the chicks, and with a great many this first feed consists of cornmeal made into a mash by adding cold water.

The chick needs no feed for at least 36 hours after leaving the shell, and excellent results have been obtained by withholding feed for the first 72 hours of the chick's life. The chick, before leaving the shell, has absorbed the yolk of the egg and this serves as its first food. In case other food is given before the food provided by nature, has had time to be assimilated, the digestive organs are overworked and bowel trouble often results, which weakens the chick and very often causes death.

After being placed in the coop, the chicks should be furnished with coarse, hard sand and a dish of pure, clean water. Very soon the chicks will commence picking at the grains of sand. When the chicks indicate by their actions that they are ready for food, it is time to begin to feed them regularly, but a small quantity at a time.

The first food may consist of boiled eggs, or wheat bread soaked in milk and squeezed out dry. After a day or two some good, wholesome prepared chick feed may be used. For the first three weeks the chicks should be fed four or five times daily. After that three times each day will be sufficient. They should be supplied with what feed they will eat up clean, but none should be left over. When the chicks are six or eight weeks old, cracked corn and wheat may be added to their feed and when possible should be fed in litter, in order that the chicks may get the exercise which is necessary for proper growth and development. A soft mash may also be used occasionally, for a change, with good results, but should never be fed sloppy animal food, and green food should also be furnished, if healthy, rapidly growing chicks are desired. The animal food may be supplied in the form of green cut bone, boiled meat or milk. The green food may be supplied by placing coop on new ground, where the grass is fresh and clean. If this is impossible, clover or chopped beets may be furnished the chicks.

Pure fresh water should be supplied from the first day and during very warm weather should be supplied two or three times daily. Earthenware fountains may be used or even fountains made by inverting a large tin fruit can in a pie tin or flower pot saucer. The can should have holes

punched in it about one-half inch from the open end of can. When the can is filled with water, it may be covered with the pie tin or saucer and the whole inverted.

Great care must be taken to keep the coops clean and free from lice. The lice may be kept down by spraying the coops weekly with a solution of kerosene and carbolic acid, and by frequently whitewashing the inside of the coops. The chicks should be separated as soon as the sex may be determined, and the cockerels removed to new quarters and fed on a fattening ration. This will leave more room for the growing pullets.

Geneseo, N. Y.

Cora A. Cleveland.

THE DANGERS OF OVERCROWDING.

Even in these enlightened days of poultry-keeping, there are many points upon which the grossest ignorance prevails, and many abuses exist, of which the worst and most common is overcrowding. In fact, so prevalent is this abuse, that nine out of every ten poultry keepers are guilty of overcrowding, and this more especially amongst the smaller poultry keepers, who wish to make money out of fowls, although they have not the necessary accommodation, except for a very limited number.

The results of overcrowding, are, or ought to be, sufficient to prevent any right thinking poultry keeper from practicing and propagating the abuse. In the first place, it is an act of cruelty to the fowls themselves, and whether this overcrowding takes place in the fowl-house or in the run, the results are equally disastrous; as birds kept in such unnatural conditions can not be other than diseased, and neither they nor their eggs are fit for human consumption. And yet when we come to think of this, who can say how many thousands of such eggs and poultry find their way into the markets every year?

In many cases, no doubt, overcrowding is the result of ignorance, but anyone who intelligently studies the poultry press can not plead ignorance in this respect, as the vile practice is constantly being deprecated. No, in numerous cases it is not ignorance alone, but ignorance combined with a pernicious greed for larger profits, that is responsible for overcrowding, and the people can not be made to see that by thus working against the laws of nature, they are only bringing nearer, and making more certain, their own failure. Of course, where overcrowding exists on large farms, the failure of the undertaking is a sure and speedy thing, and the promoter has to seek fresh fields and pastures new for the exercise of his powers; but in the case of the smaller poultry keeper, who is not dependent on this industry alone for his livelihood, and who rarely keeps any account of his profits and losses, the loss through overcrowding, though none the less certain, may go on for years, without being found out; and often enough when the discovery is at last made the loss will be attributed to the shortcomings of the particular breed of fowls that is kept.

There are many poultry keepers who provide their fowls with a large enough house, but have only sufficient land to accommodate half or a quarter the number of fowls that are crowded on to it; whilst I have seen scores of cases where both houses and runs were of astonishingly small dimensions, in fact, so small that the idea of keeping poultry in them was absurd.

Now it is impossible to state any hard and fast rules as regards the size of a poultry house or run requisite for a certain number of fowls, but it may be roughly stated that in building a fowl-house about five square feet of floor space should be allowed for every adult fowl. This estimate is liable to modifications, according to the size of the fowls and the height of the house. In the open-fronted or fresh-air type of poultry house, half this amount of floor space will be sufficient for each fowl.

In all cases it is advisable to give fowls as much liberty as possible, for they are never at their best when kept in confinement. In many cases, however, this course is inadmissible, and under these circumstances at least fifty square feet of ground should be allowed for each fowl, and a breed should be kept which is best able to stand confinement, for the varieties differ considerably in this respect. Of course it is essential for fowls to be confined during the breeding season, and provided the runs are large enough, or the number of fowls in each run small enough, all will be well, but it is the packing and jamming of a large number of fowls into a small run that works such havoc amongst the birds and their progeny, overcrowding being responsible for more than half the diseases to which poultry are subject.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Standard Color Plates—Association Shows.

In discussing the matter of illustrations for the edition of the American Standard of Perfection in 1910, T. F. McGrew, of The Feather, says:

"The editor of the Reliable Poultry Journal stated in the March issue of that publication that he should like to be selected as a director for three years of the American Poultry Association, and to be appointed chairman of the Standard committee. The things one has accomplished should have great weight in selecting one to fill these two positions of trust. The association can feel well assured that the interests of the Standard will be well guarded through such a selection. As president of the association Mr. Curtis appointed Fred L. Kimmey, Thomas F. Rigg and T. F. McGrew as committee for illustrating the revised Standard

of 1910. Mr. McGrew has stated, if individually responsible for the illustrations in the Standard, he would confine the work to a single illustrator, believing that it is a mistake for any publication of this character to contain illustrations from more than one artist. No matter who the artist may be, we think that he alone should make all the illustrations within the Standard."

The indorsement given Mr. Curtis' candidacy will meet the approval of those best posted and most interested, who desire that the next edition of the Standard shall be what it ought to be. It is of vital interest that Mr. Curtis be appointed to this place.

Mr. McGrew is in error in stating that "as president of the association Mr. Curtis appointed Fred L. Kimmey, Thomas F. Rigg and T. F. McGrew as committee for illustrating the revised Standard of 1910." Referring to the official report of the proceedings of the meeting at Auburn we find the following:

"Mr. McKimney, president of the National Fanciers' and Breeders' Association of Chicago, presented the following motion and moved its adoption:

"I move that a committee of three be appointed by the chair to make proper investigation and report at the next meeting of this association as to the advisability of having some of the illustrations of the next revised Standard consist of colored pictures, representing specimens in their natural colors."

Motion seconded and carried. The chair appointed as this committee F. L. Kimmey, chairman, with T. F. McGrew and Thomas F. Rigg as associates."

It will be seen that this committee, consisting of Messrs. Kimmey, Rigg and McGrew, was appointed for the purpose that it shall make an investigation as to the advisability of placing colored plates in the 1910 edition of the Standard. The new constitution provides that a standing committee of three on Standard revision shall be appointed, its members to be members of the executive committee.

We want to most heartily indorse what Mr. McGrew says in regard to the employment of an artist in connection with the illustrations to be used in the forthcoming edition of the Standard. This is a most important matter, and we believe that the revision committee and the executive board will safely guard the interests of all concerned by following on lines laid down by Mr. McGrew. We have had enough and to spare of the other practice.

Continuing, Mr. McGrew says:

"There are a few other features of public importance to be brought before the American Poultry Association, among them supplying free legal advice to the members of the poultry association, and the proposition of holding a winter show by the association and presenting medals. Let it be remembered that the by-laws and constitution prescribe that new breeds or varieties can only be admitted to the Standard after they have been exhibited three years at the annual meeting of the association. The change of the meetings of the association from the show season to midsummer makes it almost impossible to show at these meetings. This seems to be the only well founded reason for the association going into the poultry show business. Better change the reading of that law

than to attempt to hold a poultry exhibit by the association. It would be much better for the executive committee to select one of the prominent shows each winter and present at this meeting the medals suggested as being created for the association, and at that same exhibition the entries for competition for recognition in the future revision of the Standard should be received. Economic and sensible business methods should be rigidly applied to the future business management of this association. There is another feature that should never exist, and that is an attempt to make the association subservient to individual or combined business interests outside of the association itself."

A careful reading of the resolution offered by Mr. Rigg and unanimously adopted shows that Mr. McGrew has not clearly grasped its idea. The resolution as offered and adopted is as follows:

"Whereas, It is among the declared objects of the American Poultry Association to encourage poultry exhibitions held under the rules and regulations of this association and to promote the interests of poultry breeders in general and of members in particular, be it

Resolved, That the executive committee be and is hereby authorized and directed to accept invitations to hold an annual American Poultry Association poultry show in connection with poultry, pigeons and pet stock exhibitions held in different cities of the United States and Canada under the rules and regulations of this association at which American Poultry Association cups, medals and diplomas shall be offered and that the said committee make the necessary arrangements for holding these annual exhibitions; provided that no expense shall be chargeable against the funds of this association further than the authorized expenses of the secretary-treasurer, who shall be present in the interests of the association, and the cost of cups, medals and diplomas to be awarded as American Poultry Association specials; provided, further, that these annual A. P. A. poultry shows shall be held only during the months of November, December, January and February.

Resolved, That no legislative action of any description shall take place at these winter meetings of the American Poultry Association."

This resolution means—we state with authority that Mr. Rigg intended it to so mean—that the association annually offer association cups, medals and diplomas in connection with an important show—one year at New York, the next year at Chicago, the next at Boston, and so on; that at these meetings new breeds or varieties can be shown so as to meet the legal requirements regarding application for admission to the Standard of Perfection; that these meetings are solely for the purpose of "encouraging poultry exhibits held under the auspices of the American Poultry Association," to advance the interest of the association, exhibitors and breeders, and to make these annual meetings social features which will put good cheer and renewed hope into the hearts and lives of our members.

Secretary H. V. Crawford writes us that he will announce, through the poultry press, the date of the next Madison Square Garden show as soon as possible.

Getting Away From Type.

Mr. D. B. Whaton of Boston penned this postscript to a business letter we received from him a few days ago:

"I was much interested in the editorial in the American Poultry Journal, April issue, in which the folly of getting away from breed type was so well set forth. For years I bred White Leghorns in England. In those days we had a true Leghorn. Then came the craze for the large, coarse birds. As a result the English White Leghorn to-day is about as far removed from Leghorn type as is the Minorca. It has been the ruination of the breed in England. I am more than glad that the American breeders of White Leghorns are sticking to the true type."

It was necessary a few years ago for the breeders of Brown Leghorns in this country to go to work and increase the size of their stock, for the Brown had run down to a point nearing bantam weights. This is why the American Poultry Association included "size" in Leghorn scale of points. The improvement was quickly and effectually made. The Whites never needed this.

Death of T. E. Orr.

The death of T. E. Orr comes as a great grief and personal affliction to a very large number of poultrymen throughout America. For more than a quarter of a century Mr. Orr was one of the most prominent, active and thoroughly competent writers and lecturers on poultry matters and a judge whose services were in demand far beyond his power to supply. In 1891 he was elected secretary-treasurer of the American Poultry Association, being annually re-elected and holding the office at the time of his death, March 23. His administration of the affairs of this office was such that the association rapidly grew in power and influence.

T. E. Orr was a man of strong and pleasing personality. He had an individuality all his own. He was scrupulously honest, always sincere, firm in his convictions and unyielding to expediency. He loved his friends, and his loyalty to them was one of the features of the man's nature that drew men of honor to him and to his support.

In American Poultry Association matters, as well as in all the affairs of life, he stood for what was clean and uplifting, and throughout the innumerable conflicts which have raged within the American Poultry Association he was always found on the highlands—never in the mire. His sincerity of purpose was never questioned.

He was a Christian gentleman. "The faith of our fathers" was strong within his warm, generous, loving heart. He died as he had lived—at peace with God and man. The end came peacefully and without pain and all is well with him to-day in his home beyond the tablelands of eternity.

We mourn as friends bereft with the widow and the orphans. May God's blessed assurance comfort and sustain them.

On the theory that the world moves forward we may safely expect to see the nonsensical clause in the Standard whereby American varieties are cut for overweight speedily repealed. It is safe to predict that it will not appear in the 1910 edition of the Standard.

Election Commissioner Fred L. Kimmey took a half day off recently and attended the convention of the National Bee-Keepers' Association. We find him asking how beeswax can be "clarified and refined." We venture the opinion that this is not all that he would like to see "clarified and refined" at this time.

* * *

It looks as though "the committee of fourteen" should have placed a penalty clause in the constitution whereby every member failing to vote would have been fined. Then, more than one-quarter of the total membership of the American Poultry Association would have voted the nominating ballot—perhaps.

Poultry Press Review.

Farm Poultry is still at it. "The most significant item of news for the month" (April), says Brother Robinson, "is the little matter of fact statement in the notice of the Partridge Wyandotte Club, that the club intends this year to issue a catalogue which will contain the revised club standard. The Partridge Wyandotte Club will not compare in strength of numbers with some of the other specialty clubs, but as evidenced in this announcement, it appreciates the advantage to its variety of giving the greatest possible publicity to correct descriptions of the Partridge Wyandotte; it is progressive and independent. It knows how to help its favorites, and can not be bluffed out of doing it. Other clubs will follow. The day of Standard bluffing has gone by. The American Poultry Association, equally in its action in the case of the Orpington 'infringement' of the copyright and its inaction in the case of the R. I. Red Club standard, confesses that it is afraid to attempt to back up its claims either of proprietorship or prerogative. All the discussion of the Orpington matter, after the presentation of the report of the committee at Auburn, was a waste of words—idle words. The sum of the whole matter is found in the fact that a threat was made that if the A. P. A. took any action in regard to the Orpington case, the publisher of the Orpington Poultry Journal would publish the entire Standard in his paper, and with this threat before it the committee 'believed that no benefit would be derived from the prosecution of the case. Therefore it is the recommendation of your committee that no further action be taken in the matter.'"

* * *

T. F. McGrew, in The Feather, gives this complete answer to those who are claiming that the Standard of Perfection has ignored the utility side of the fowl: "In the use of the score-card, there is scarcely ever a cut made on shape which is not applied to the imperfection of the specimen along the lines of market poultry. The cut for a deficiency in breast or any portion of the body, is always made because there is a feature lacking that would add value to the specimen in the market stall. There is only one point left for them to raise a contention about, and that is the question of plumage. How ridiculous it would be to permit a fowl that should be true white, and which lacked in color or plumage, to gain supremacy in the exhibition pen. In every flock there will be a sufficient number

**EASY
TO
USE
QUICK
ACTION**

That's what you want when you have vermin and lice in your poultrypens. Lambert's Death to Lice is the quickest safest louse killer made. Cannot harm anything except the lice. You can sprinkle it on from the can, with very little trouble. If you want to apply to woodwork it can be had in liquid form for spraying. For head lice on chicks Death to Lice Ointment never fails to do the work.

Lambert's Death to Lice

powder has been on the market for nearly 25 years and used by successful poultrymen everywhere. Guaranteed to clean out vermin in poultrypens, on stock, or bugs from vines.

having the off-colored plumage to fully satisfy the heart's desire of the greatest grumbler along utility lines. If some one of those who claim that standard demands detract from market qualities will present a bill of particulars, setting forth a reasonable charge of this kind, we would be glad to consider same from a rational and truthful standpoint, but as long as the greater portion of these come from disappointed exhibitors in the show room, there is no reason why anyone should go beyond the above statements in their consideration."

In the opinion of the Reliable Poultry Journal "when the day comes that earnest and progressive poultrymen of the United States and Canada take so little interest in poultry culture, in the improvement of the Standard of Perfection and in the welfare of the American Poultry Association that they are not willing to be taxed once in five years the price of a second, third or fourth rate sitting of eggs, it will be time for every self-respecting man in the poultry business to get out of it." And Brother Robinson, of Farm Poultry, thinks it is taxation without profitable representation.

Poultry Herald (George D. Holden) says that "the show associations of Minnesota, North and South Dakota, Nebraska and Montana are ready and willing to take advantage of the opportunity offered them and will take prompt steps toward the organization of a northwestern branch of the American Poultry Association, and in so doing will show our allegiance to the national body and our interest in doing the best we can for the advancement of the cause in the great northwest."

In response to a general demand by breeders throughout the State of Tennessee an association has been formed in Nashville for the purpose of holding a comparison judging show in December next. It will be the first comparison judging show held in the State. The management has come North for a judge, Thos. F. Rigg having been engaged to do the work. Editor Hicks, of the Industrious Hen, and Judge Marshall have come out strongly for comparison judging and things are booming within the fancy in old Tennessee.

Only two poultry journals in America have ever posed as judges of the poultry judges, and one of them is now dead. However, the Inland asks these questions: How long will the poultry press of this country tolerate the "fad judging" to the detriment of good birds and Standard description? Why should the American Poultry Association spend thousands of dollars making the Standard, and then allow its laws to be ignored by would-be experts? When judges put up three or four different type birds in making their awards, it is time for some one to say "stop."

In a recent issue of Poultry (London, England) appeared the photo of a hen with the Light Brahma markings, in wings, tail and hackle, comb single, with five points. Poultry says it is "a Light Sussex hen." This hen looks like a single comb Columbian Wyandotte, except that it has the long body of the Dorking. Best thing on earth for the Columbian Plymouth Rock fellows to draw to.

Says Poultry Topics: "Putting all the money you have into buildings and leaving nothing for stock is a sure way to make a failure of poultry raising. You are commencing at the wrong end by so doing. It is by far better to invest the major portion of your money in a good trio or pair of birds of your choice and house them in a dry goods box until you can afford a better place."

The Feather says that a Pennsylvania firm is making large importations of Hungarian pheasants and German and Maltese pigeons. Hungarian Partridges are about twice the size of our every-day quails or Bob Whites as commonly known. These were imported for the game commissioners of Illinois and Kansas.

The Michigan Poultry Breeder says the breeder who does not consider money spent for advertising a necessary expense had better get out of the poultry business before he loses any more money. Level headed George S. Barnes thus tells nothing but the truth.

Poultry, whose editor, Miller Purvis, has been in close partnership with laughter and mirth for more years than he would care to name, is very anxious for the time to come when the committee of the American Poultry Association shall begin its judging of the poultry judges.

The Australian Hen says that the demand throughout Australia for Columbian Wyandottes is very great and that large numbers of this popular new variety are being imported from the United States and England.

Poultry (London, England) says that specialty clubs over there are trying to solve the problem "what to do with defaulting members." There are a number of clubs in this country engaged in the same task.

The Western Poultry Journal believes that "the incubator, brooder, spray pump, liquid lice killer and dry chick feeds have been the greatest aids in the advancement made by the poultry industry."

Poultry Success thinks that great good will be derived from the poultry institutes which will be held each year under the auspices of the American Poultry Association.

The British Fancier thinks that the American varieties of fowls—the Rocks and Wyandottes—are the best general purpose fowls in existence. We can shake hands on that, my brother.

The New England Poultry Journal says that a large number of the winners at Madison Square Garden and Boston shows are "bred by small breeders in Connecticut." Tut, tut.

The Industrious Hen firmly believes that the trap nest is one of the greatest blessings within reach of the poultryman. Theory or practice, Brother Hicks?

The New England Poultry Journal believes that the Light Brahma, when properly handled, is one of our most profitable breeds of fowls. There are a lot of folks who agree with our contemporary.

Poultry Tribune makes this bulls-eye shot: "The man who can successfully keep 500 head of poultry on an acre of ground has not yet been born."

Do it now. What? Anything that needs doing in the poultry yard or for the chicks.

The Pacific Fancier holds that it is time an annual show of national importance was held on the Pacific Coast.

Commercial Poultry will try to decide who is the most popular Southern judge. Beware, Brother Schureman.

Facts and Fancies.

Written for A. P. J. by D. Lincoln Orr.

I have often been asked how many chickens will a brooder hold? While in Washington, D. C., the other day, I heard a story that gave me an idea how to answer the above question. In a certain quarter of a prominent city, room was scarce and in one house four families were living in one room. Each family had a corner. Everything went along well until one of the families began to take in boarders. Then there was trouble. Don't undertake to take in boarders in the brooders or there will be trouble, sure as gunpowder.

The idea of putting on cuts "Bred and owned" by Mr. Blank seems rather far-fetched. Why not put on "Hatched and raised" by Mr. Blank. I think it all should be dropped. Just put on first mongrel pullet at Hayseed Poultry Show by Mr. Blank. There is no use lying too much, and what I have proposed is just the truth.

It seems a pity that we are so prone to lie. There are men that we could trust with our lives and wealth and feel safe, but when it comes to a little chicken deal, "They simply can't."

I got a letter the other day asking me to go easy and not to stir up the conservative souls. Nothing can give me more pleasure than to stir them up. It's better than a liberal supply of liver pills.

Funny how men and things change. Now look at Purvis, for instance, holding office in the American Poultry Association. "Why, Orr, I will never hold office again and I have resigned from the executive committee." That is what he told me at Minneapolis. Guess it was at that place. Now look and behold a vice president, and shouting like a Salvation Army lass.

I am mighty glad, as Purvis is all right, and I am glad that he will (barring accident or death) have a week's vacation at the association's expense. Honest graft. Crawford, Rigg, Bates, Tompkins, Donovan and 999 others have had a go at the treasury for a week's outing and I am glad Purvis is going in for a slice.

But I hope he will not go in for a classified adv. Better make it a display, Purvis. It costs more, but then "What's the use?"

To one who knows, the most interesting part of a poultry journal is the advertising, especially as to the display regarding winnings. I look them over

carefully and have often wondered why Roosevelt overlooked some of the advertisers when looking for a Secretary of State. Talk about diplomacy! Why, Secretary Hay was only about a second-rater compared with these masters. I was reading one of a very prominent breeder and for the life of me I could not tell what was what. But then I must look out for those "conservative souls."

There are lots of queer things. One of the queerest is to pick up a poultry paper and see the great array of Columbian breeders. They seem to spring up over night most extraordinary, and by the way, I would like to give a little advice to Columbian Wyandotte breeders. Have your eye open to those very fine specimens you raise that happen to have a single comb. They may be worth more than 10c to 15c per pound. "That's all."

I was much interested in an article in the Inland about following the Standard and would like very much if the Standard could be followed better. At Hagerstown some few years ago in judging a certain variety the judge was simply carried away by certain markings, simply ignored the shape as well as other important features. A judge should be cold-blooded and judge the birds by the standard regardless of all else, follow it to the letter, and where it proves deficient, have it amended, that's all.

But then it is simply impossible to have perfection, and once in a while a judge will be the hardest to criticise another's judging and most bitter in attacks, especially if he has left the arena of judging.

I was helped a big lot when I read Schureman's editorial about so much money in "chickens." So much so that I wiped the slate off and am going to start a new account again with Columbians as a leader. No stock, no eggs for sale. Thank you.

I think the American Poultry Association ought to have an honorary list of presidents or call them past presidents and have their names suitably engraved, embossed or as you will on the stationary of the association. I am in communication now with the living ex-presidents to form a society of our own. We will make I. K. Felch chairman, G. O. Brown vice chairman, G. M. Curtis secretary, Dave Nichols chaplain. Having no ax to grind, we will be like Cæsar's wife and will therefore be free from attacks from Boston.

"Errors, like straws, float upon the surface—we must dive for pearls." Is it any wonder why some folks can see the errors the A. P. A. has committed? Not in the least. They will never find the pearls though, because they won't dive.

There are more successes in the poultry business to-day than any other calling where single individualism is concerned. "Corporations and companies excluded," successes are spelled in other than the \$ sign, and I know men who have large enterprises and big responsibility find infinite pleasure and rest in keeping chickens. And the interest on the plant pays big in health.

T. E. ORR.

MR. THOMAS E. ORR.

I have just learned that Mr. T. E. Orr has passed away. It was years ago that I first met Mr. Orr, and our friendship not only became that of fanciers working for the betterment of poultry, but we became warm friends—what one would call family friends. I presume the name possibly had something to do with starting the friendship, but it kept on growing. Having visited at Beaver several times, we became warm friends. The poultry fanciers of America are well acquainted with the late Mr. Orr and I feel that not only many of us have lost a warm personal friend, but the fraternity has lost an earnest supporter. His work as secretary of the association stands out as always being in line for its advancement and by advancing the association Mr. Orr was sure of advancing the poultry interest.

Don't be a mollycoddle, but stand right up to the scratch; if you have fowls see they are well cared for and do it yourself if needs be; have aim and a target and shoot to hit; be consistent and persistent; you will win.

Take hold of a certain breed, one you like best, and work to improve it. Don't get discouraged. If you like it and stick to it and have taught the

It is not my purpose to praise Mr. Orr way up nor to pick out his faults. We all have many good points and many faults, but I will say that I believe he has done more for poultry interests the past dozen years than any one else. I believe he was honest in his convictions and always fought hard for what he thought was right.

I feel keenly his loss; to me it seems a personal loss, and my heartfelt sympathy is extended to the bereaved family, and I know well the readers of the American Poultry Journal will join in. The Almighty has seen fit in His judgment to leave a vacant place in the home of our friend. We trust and pray that he will send courage and consolation to bear the family up so they may realize that he who has gone is not dead, but only waiting for the rest to join him in the land of everlasting joy and peace without end.

D. LINCOLN ORR.

people to know your strain you have won a great victory.

I couldn't help but smile the other day while in Philadelphia. I was on a trolley car when it collided with a milk wagon and spilled the milk into the street.

"Goodness!" exclaimed the man, "what an awful waste." A very stout lady turned and glared at him. "Just

Everything For The Poultryman

mind your own business!" she snapped. I paid 3c for a transfer, but as it was only good for that day I could not use it.

I have just learned something. The other day I picked up a prominent weekly magazine and in looking over the advertisements I saw one about poultry. He was advertising Barred White, Buff and Black Plymouth Rocks. There may be Black Plymouth Rocks, but I have never seen any, nor can I see them in the Standard, nor in looking over many show catalogues do I find them? And furthermore, I never saw this man's adv. in a regular poultry paper. Funny, isn't it?

Three hundred votes in a possible one thousand. Gee! but there is something radically wrong, and to think after all I have done, not one of those three hundred was kind enough to give me even a complimentary vote. Guess I must be "one of the also rans."

Did you ever stop to think "that two and two make four? Not sometimes, but all the time." One can not get results from haphazard matings or from good matings and no care.

Horace Greeley said fame is a vapor, popularity an accident, riches take wings; those who cheer to-day curse to-morrow; only one thing endures—character. Guess Horace was about right.

There are thousands of enthusiastic poultrymen in April busy cleaning out houses, running incubators and brooders, and have already (in their minds) enough broilers for the city or New York and have also (in their minds) won the lion's share at New York, Boston and elsewhere. Gee, but they are busy and happy. But by July they have petered out between rats and myriad other troubles, the conclusion arrived at is "chickens don't pay," and they don't to the faint-hearted. "Two and two make four—not sometimes, but all the time." Don't forget it.

At a bowling match the other evening I was just a little over-anxious to make a strike. The umpire yelled "foul." A friend remarked that I was always trying to advertise the poultry business.

There has been a great deal said the past few years about giving chicks nothing for the first 24 or 36 hours, then a liberal supply of grit. To me the grit part is all moonshine. The first thing a chick should get is something digestible. Make the first feed 36 hours if you wish, but give it something to eat that it can digest. Grit is all right and should be fed, but other things come first. A newly hatched chick will fill its little crop on anything that is thrown on the brooder floor and I am thinking that not a few join the majority because they have a crop instead of a stone crusher.

And don't be afraid of fresh air for the chicks. There is nothing that will help them grow as plenty of fresh air. Let them out all you can, I don't care if it is zero, they will be O. K., but they must have a warm, dry, clean place to hike to when they want warmth. They soon get on to the game if given a chance.

One of the most interesting pieces of poultry journalism from my point of view is the story running in Farm Poultry about Mr. Toogood Moneytoburn. I enjoy it and I wish to congratulate that publication on running in something different and still on the same line, that is, chickens.

We must sooner or later give up comparison or score-card judging. The American Poultry Association has made and is making a great mistake in recognizing the two methods of judging. There ought only be one way, one law for judging. The dual method has made and is making trouble for the breeder and exhibitor and I hope some plan will come forth to get all factions together. Personally I would have nothing but comparison. It is the only "safe and sane" method from my point of view, and to those breeders who think otherwise I would state, use this method for a "few years, after which you will want no other."

"Deep cutting is done by a sharp tool. The advertisement must impress itself deeply." Moral: Use the American.

Don't try to raise too many chickens. It is far better to get out 200 good strong, plump, healthy ones than 400 or 500 stunted weaklings. Judge your time and space. Don't get out more than you can care for or have room for. An acre of well-tilled land will bring in a greater return than three acres just scratched over. "Don't take in boarders." Many a failure in poultry can be traced to ignorance by crowding brooders and yards. Give them room and don't go too long on the market for late hatched chicks. As a rule they are unprofitable, undesirable and almost invariably a source of disgust to the owner and take up room and feed of those that come earlier. A few seem to do well with late hatched chicks, but they are mighty few. When I say late hatched, anything after June 15, July 1 at latest.

NATURAL AND ARTIFICIAL CONDITIONS.

Lessons to Be Learned From the Hen That Works for a Living—Kinds of Food She Chooses and the Bodily Exercise She Puts Forth to Obtain This Food—Exercise and Pure Air Necessary to Health—Free Range Single-Comb White Leghorns on Oakwood Poultry Farm No. 1—Yarded White Wyandottes and White Leghorns on Oakwood No. 2.

Written for A. P. J. by Alban Smith, Marshall, Ill.

As a rule, hens on the farm receive less attention than their importance as money makers, when properly cared for, deserves. Their shelter is often inadequate and the grain which is hurriedly thrown to them insufficient. In summer they are expected to search for the greater part of their living and with keen appetites they wander far and wide for food. Even in winter, though then generally better fed, they are not wholly satisfied; and they bestir themselves in looking about for seeds and picking at anything that has the least suggestion of greenness. Kept thus, they are not so profitable as they should be; the egg yield is small and they are light weights when marketed. Their enforced activity in the open air, however, gives them health, and their exposure, if not too great, hardiness.

The conditions under which hens so cared for, or rather so neglected, live, approach what may be fitly called natural. In changing from these to more artificial ones, if vigor is to be preserved, care must be taken to make the new condi-

tions such as will call forth bodily exercise. The natural should suggest the artificial. It should be the aim to beat nature on lines parallel to her own; and he who desires to increase profits by providing better shelter, and by more generous feeding, should not lose sight of the fact the hen on the wide range, that, in the open air, works for a considerable part of her living, is emphatically a healthy one; and he should remember that appetite is her chief incentive to exertion. With these things in mind he will not make the mistake of housing her too close, nor will he overfeed her; and he will place a part of her food, at least, so that she can only obtain it at the price of considerable exertion. He will see to it that she has to scratch for a living.

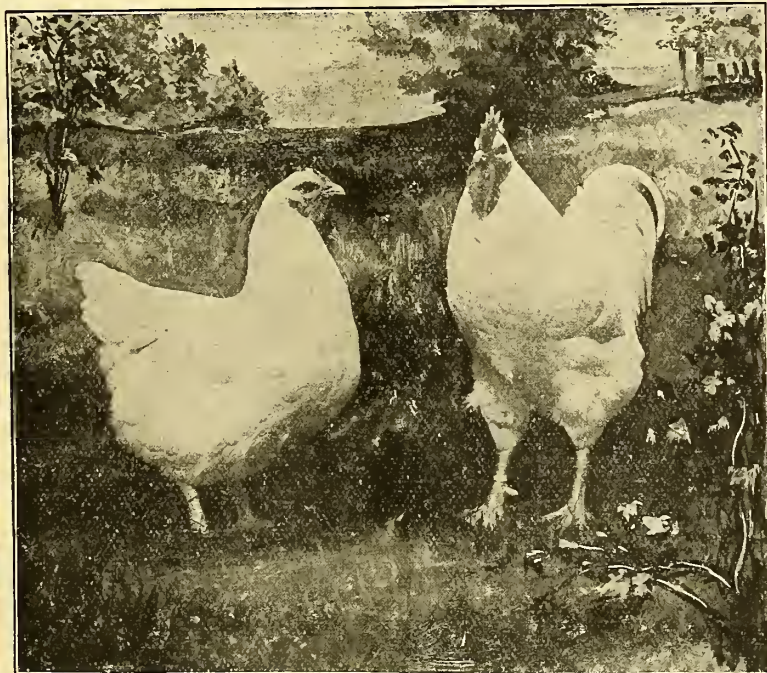

From the food just sufficient to sustain life no profits can accrue. The additional food that builds up tissue, or finds expression in the egg basket, is that which yields profit. A hen, like all animals whose flesh we use for food, may be fattened once to advantage, and when fattened should be marketed. She will probably be most economically fed if she exercises but little; but the fattening process is not a promoter of health, and health is of great importance to laying stock and of the greatest importance to breeding stock.

The underfed hen lays but few eggs in winter. Experience proves that by a generous diet of grain and its products, animal food, clover and succulent food, such as growing rye, cabbage, mangels and the like, the egg yield may be greatly increased, and still more so if proper shelter is afforded. There are three important considerations in feed-

ing: What, how, and how much. The what is suggested by the food the hen herself chooses when at liberty, in summer—grain, meat (insects and worms), and green food; and a diet something like this is indicated above. As to the how, a part of the food should be thinly scattered and a part buried in the soil or deep litter so that it may only be obtained by muscular exertion. As to the amount, one full feed may be given at night, all that the fowls will eat, if through the day the appetite is keen enough to prompt to activity; but when an abundance of food, meat, grain, vegetables, is placed before them, so that hunger may be satisfied with but little labor, there is danger that too much will be consumed, not too much, of course, for fattening purposes, but too much for their continual well being and for that robust health which makes healthy offspring possible.

It is in our breeding yards that the greatest danger of impaired vigor through inactivity exists. When breeding for increased egg production, or for some distinctive form or feathering, it is necessary that stock be carefully selected, properly mated and set apart. Without this care it is impossible to produce a great laying strain or exhibition birds of merit. To lessen the expense of fencing these yards are often made much smaller than they should be, the insect life within them is soon exhausted, vegetation is trodden out, and if the food given is so placed that it can be quickly eaten the fowls have no incentive to continued activity. In this confinement their movements soon become sluggish, the alertness, which is one of the chief attractions of a healthy fowl, is no longer

Special Sale of Breeding Stock Begins June 1

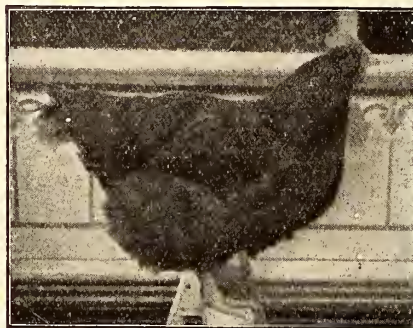

seen, and they stand huddled together, sometimes for hours, awaiting the next feeding time.

It is the practice of many poultrymen and fanciers to furnish incentives to activity to yarded stock. In our own breeding yards we try to keep something growing at all times, rye, rape, corn, oats, anything that will tempt the birds to wander about and pick here and there at the tender vegetation. Much of the grain fed is sown thinly, and when the ground is in proper condition it is buried for the express purpose of having it dug up again.

It is a bad sign when free range stock range but little, but stand clustered about the feed house much of the time awaiting the next feeding time. A free range fowl that won't range ought to be marketed at once. This sluggishness is the result of injudicious or over feeding. Such stock is totally unfit for breeding purposes. It is best not to scatter grain about the feed house. Happy is the bird that does not know what is inside of it. Grain should be carried to a distance and sown very thinly over a considerable area. The larger the grain the wider the sowing. Fowls old and young will often make several trips a day to the grain-sown ground and range far beyond it, balancing their grain ration with insect life and tender blades of grass or growing grain.

Near one of our buildings in which young White Leghorns are kept, on Oakwood Poultry Farm No. 1, the tall grass over a considerable area was left unmown, in the summer of 1905; this in the autumn fell over, but not flat on the ground, and made an ideal condition for play hide and seek with the lively beauties. Here grain was sown once each

day and here for hours, as busy as bees, they searched for food, their pure white plumage showing here and there through the tall brown tangle. The house is on the open front scratching shed plan, and in the scratching sheds of this building the roosts were placed. Here well sheltered at the back and sides and above, but with only wire netting in front, they passed the nights until about Christmas,

Single Comb Buff Orpington Hen. Bred and owned by Charles Benington, Edmeston, N. Y.

when, the mercury suddenly falling, they were removed to rooms, well ventilated but inclosed on all sides. Litter in which to scatter grain was then put into the scratching sheds, but still, when the days were fair, the Leghorns were lured to the tangled grass plot without. These birds were hatched in the spring of 1905; they are still in our possession. A more vigorous lot of birds we never owned. They began to lay early and laid well through both the first and second winter.

On my new farm, Oakwood No. 2, near Marshall, Ill., our Wyandotte and Leghorn breeders are carefully mated, they have roomy quarters and access to large yards. In mating, vigor, as well as standard qualifications, are carefully considered. My motto is to keep them busy a part of the time and not to shut them up too closely, even in extreme cold weather. All of the young stock are brought up on free, wide range. They roam over the pasture fields, through the standing corn, into the field where tender young rye is growing, everywhere where insect life or tender vegetable growth allures. I have found some of them at times at least half a mile from home. Of course, in the warm weather they naturally seek the shade when the sun is high, and their plumage is the whiter in consequence; but in the morning and as the cooler evening comes on they are out again on the range.

"BUYERS SHOULD STUDY THE STANDARD."

Written for American Poultry Journal by Will Clark, Sullivan, Ohio.

To one who is about to engage in the breeding of standard bred poultry, it is of the utmost importance that they acquire all the knowledge that can be gained along this line, both by observation and study. And with the information thus obtained, the chances for success are greatly increased. Especially should the buyers of standard bred poultry inform themselves by studying the Standard of Perfection. Then they will be in a position to know whether or not they are getting value received for their money, and good, honest breeders and

Chicken "Children Cry For" Purina Chick Feed Best for Baby Chicks

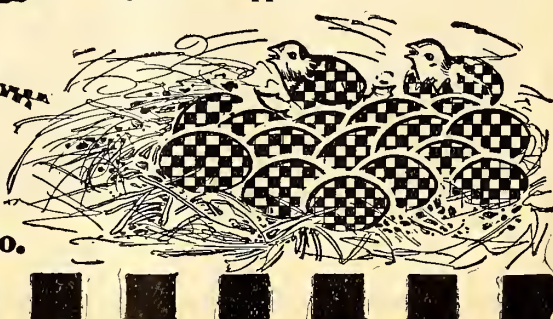

Because it contains just the right elements—properly combined and balanced—to make

little chicks grow big and sturdy—and *profitable*. No smutty or burnt wheat, no drugs, no grit—but over a dozen grains and seeds perfectly pure, sound and sweet—hulled oats, millet, flax, kaffir, cracked wheat, cracked corn, etc.

All run over screens to remove all the useless, wasteful meal and fine siftings.

And you'll never find an ounce of grit in Checkerboard Bags to make them weigh more. So there's no waste in Purina Feeds. A feed for every purpose—Purina Mash, Purina Chick Feed, Purina Scratch Feed, Purina Alfalfa Meal.

Ask your dealer for the *Checkerboard Bag* and you'll be sure to get the best. For sale by all good feed dealers. If you can't get the *Checkerboard Brand* from your dealer, write us direct, and we'll see that you are supplied.

shippers would often escape being "raked up the back" and accused of dishonest dealings by a class of buyers simply through their lack of knowledge of the standard requirements of the particular breed they are buying.

I have had this brought very forcibly to my mind this past winter in a few cases, one of which I think will not be out of place to mention here, though I refrain from mentioning names in connection with the matter. An acquaintance of mine and a man who has bred and shipped standard bred poultry for a great many years received an order from a party who wanted a pair of choice birds. The price paid was \$10 and the birds shipped as ordered.

A short time after their arrival a letter was received from the buyer stating that the fowls were worthless only as market poultry, and that they (the buyer) cut the heads off of and ate better specimens than the ones sent them, and that they supposed the seller had taken them for a "sucker," and that he could shove "any old thing" off on them, but this could not be done, as they knew all about the breed in question.

The shipper notified the party to return the birds at once, at his expense, and their money would be cheerfully refunded, which was done.

A few weeks later this same pair (among others) were sent to the Tiffin, O., show, and won first cockerel and first pullet, scoring 95½ and 96 respectively by a judge of national reputation.

A little later they were sent to the Toledo, O., show, where they again won first cockerel and first pullet. These birds could not be bought now for \$25 each. Now I do not claim that all poultry breeders are saints, but as a rule they are a pretty good class of people. And the breeder and advertiser who has kept his name constantly before the people through the columns of the poultry journals (among which the American is one of the best) can invariably be relied upon; for if they were not doing a straight business their business would have dwindled away and their advertisements would no longer appear. Whenever I have received any complaint from a customer I always request them to return stock if not perfectly satisfactory, after first studying the Standard of Perfection, with the result that I have never had a single bird returned to me during the ten years I have been breeding and shipping standard bred poultry.

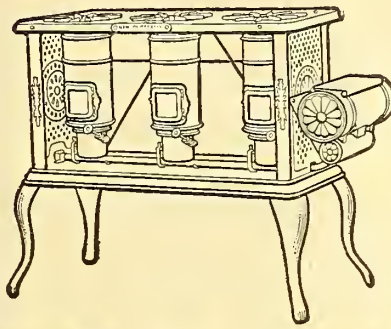

Perfection has never yet been attained in any breed or variety of fowls, but oftentimes a bird which does not come up to the expectations of an untrained eye may come very close to the standard requirements, and vice versa.

In conclusion let me say, if you are anticipating buying, selling or breeding standard bred poultry, first of all get a copy of the Standard of Perfection, study it carefully and thoroughly, and become familiar with the requirements of the different breeds, especially the ones in which you are most interested. Then you will be in a position to breed and judge intelligently.

PITTSBURGH PERFECT

Poultry and Garden Fence

No clamps—
No wraps—
No twists—
No knots—

to allow spreading of stays, to crack the galvanizing, to hold moisture and cause rust.

Just one solid continuous piece of heavy galvanized wire.

The whole secret of the "Pittsburgh Perfect" Fence is in the weld—not soldered, not brazed but welded.

At every place where the wires cross, they are welded together by electricity—a special process controlled by us alone.

The wires cannot spread; are as firmly a part of each other as the calks are the horse-shoe—same thing exactly.

This construction does away entirely with the old style fence—all bulging joints and excess weight; makes the lightest and strongest possible construction—as smooth as a bolt of cloth.

The "Pittsburgh Perfect" Fence is the strongest and most durable, will out-wear any other fence in the world—a fact proven by actual test, figures and experience.

Its construction allows contraction and expansion in varying weather, and it always stands upright, firm and tight. No top or bottom board required. Adjusts itself perfectly to uneven ground.

Made in five heights: 25, 35, 46, 52 and 58 inches.

Two weights: Top and bottom wires No. 10, others No. 13. Top and bottom wires No. 9, others No. 12.

Electric Welded Fences for all purposes are made by

WHY SINGLE COMB BUFF LEGHORNS ARE BRED.

By Peter S. Hurt.

As has often been said and as is generally understood by most poultrymen, "shape determines the breed and color the variety," but I wish to call your attention to some other features that are more far-reaching than either of above and yet are not entirely contradictory. There are many innate characteristics of certain breeds and varieties that mean more than either shape or color, or both, and it is either the lack of or possession of these indispensable qualities that causes the so-called "booms" to grow, enlarge, swell and finally burst, or to stamp quality and utility on them to be as a "joy forever."

This is not true in any greater measure than with the Single Comb Buff

First prize Illinois State Show Cockerel, January 7-12, 1907. Scores 94½ points by Charles McClave. This bird has almost perfect head points; large, well up on nice yellow legs, and a wonder in shape and color. He has best striping in back and saddle we have ever seen in a Rose Comb male. Bred, owned and exhibited by T. E. Applegate, Spickard, Mo.

Leghorns, so in mentioning these attributes you will readily understand "Why S. C. Buff Leghorns Are Bred."

Buff Leghorns, as introduced into America by Aug. D. Arnold, were decidedly blocky in type and have been handicapped in showroom when put up beside the older varieties; but, mark you, it has won for them a laurel that other Leghorns have yet to win—the largest of all Leghorns.

They have proven themselves worthy of the name of Leghorns in activity, hardiness, compactness of body and in producing white eggs in quantities, and have far outstripped their "kith" in size of product. They lay the largest eggs of any of the seven varieties of Leghorns.

The color of Buff Leghorns is recognized by all authorities to be nearest to perfection of any buff breed yet put out when in the show ring. Moreover, it has other attractive features. In producing and feeding young you do not have to select feed that is especially adaptable to that color, as with the whites; neither is that abundant shade compulsory to protect it from becoming off colored, as some of the others. The solid color is also easier to produce than some of the

"variegated" ones. The tedious work required in preparing the Whites for the show room is reduced to a minimum in the Buffs.

By virtue of the foregoing facts there has been a powerful, sure and steady demand for them with supply far in the rear, so they are now enjoying the delightful fruits of that tree called "Popularity," and the breeder who takes hold will enjoy the "Dollar Flavor."

Thorntown, Ind.

RAISING DUCKS.

There are a number of different kinds of ducks, but they all require about the same care and consume the same amount of food. In this country Pekin Ducks are reared more extensively than any other variety, as the pure white feathers make a nice appearance and sell well, and the ducks bring good prices here for table use, and for breeding purposes the Mammoth Pekin Ducks can't be beaten. Ducks are usually neglected as a branch of the poultry industry. Few farmers bother with them, and it is only on the outskirts of cities and villages, by rivers and streams and on the cottager's premises they are to be found in numbers. Thousands of farmers in this country have every facility for raising ducks. On many homesteads there are streams, rivers or ponds near by that might be utilized for this purpose to good advantage without much outlay. Some men say, "No money in ducks; they'll eat as much as a hog." What if they would? When a young duck weighs four pounds they are ready to sell, and we can get 50 cents for them; this is 12½ cents per pound. Hogs at that time of the year are not over 6 cents—sometimes a great deal less. They are not near as much expense as a hog, for you must feed the hog about eight months and the duck about eight weeks. As nearly all children like to care for ducks, why not allow that boy or girl to earn their money? Breeding for profit is the grand object to be obtained in breeding aquatic fowls. While there is a big profit in common ducks, there is nothing compared to what can be realized on the improved breeds. Unless ducks have a suitable place and receive regular attention to their wants, they will not do so well. The half starved duck disposes of a great deal of food, but the duck that is

well fed from the shell, properly cared for, and matures early is profitable both for flesh and feathers. Allow me to give a few suggestions that may be helpful.

Ducks are much easier raised than chickens; they are not retarded in growth by the many diseases the chicks must contend with.

The best remedy for duck ailments is plenty of sliced raw onion in the mash, and a dry, soft bed.

When you desire ducks for egg production, have four to five ducks with an

Don't worry them by taking a light among them at night. This is said to reduce their weight.

Do not throw dry lime in a duck pen; it kills.

They are such busy creatures, they will hunt a great deal of their feed if placed on a wide range.

The ducks should be locked in at night and not let out before 10 a. m. the following day, as they often lay in the morning.

Aim to have early hatches, as these are the ones that will bring the profit.

Osborn, Ohio.

Grace Eby.

BOURBON RED TURKEYS.

I will write on the Bourbon Red Turkey, as many I suppose would like to hear of this beautiful turkey. I have been raising the Bourbon Turkey since 1905. I never saw one of the turkeys until I purchased mine. On first receiving mine I was dissatisfied with them—first, they were not as red as I thought they would be; second, I did not think they would have any white about them. For the benefit of those who want to hear of this beautiful turkey I will say I like them better than any turkey I have ever raised. I have raised White Holland and Bronze and I like the Bourbon best. The longer you keep them the better you like them and when they shed off and their plumage comes out anew it is more beautiful than at first.

I think the time is nearly here when all people raising turkeys will prefer the Bourbon. I have some turkeys hatched in July or August, I do not remember now, and today they are hens and I am expecting them to lay in the spring. The bad weather did not seem to hurt them, and I have had Bronze turkeys hatch late and they could not stand the cold at all, they would droop around and finally die, and I was out of heart raising late turkeys.

I hope this will be of some benefit to those interested in this breed of turkey. I hope soon to see the Bourbon turkey the leading turkey. There are so many who know nothing of this breed and I for one did not until I tried them. I could write much more on this subject, but as this is my first time and I am afraid of the waste basket,

Vienna, Ill. Mrs. James Fleming.

First prize White Plymouth Rock cockerel at Ann Arbor, Mich. Score 95½, by Tucker. Bred and owned by E. C. Zoeller & Son, Jackson, Mich.

unrelated drake; two ducks and one drake produce too large a percentage of drakes.

Do not let the ducks run with fowls. Disease is sure to visit the chickens that are allowed to drink from the vessel the ducks have paddled in.

Always catch a duck by the neck; too often their legs are broken by being caught by them.

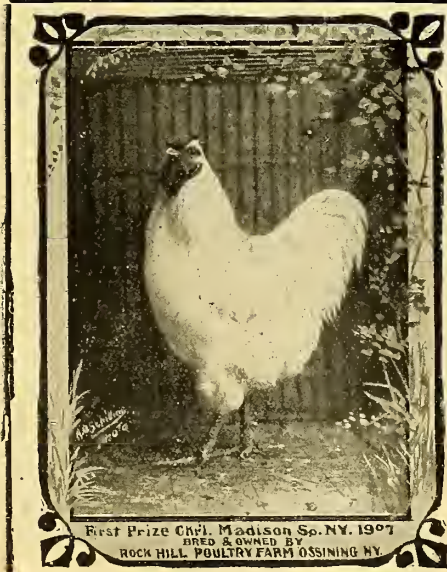

Special Sale of Stock

500 S. C. W. Leghorn pullets, 50 S. C. W. Leghorn cockerels, 200 White P. Rock females and 25 males; 25 pair of White Muscovy Ducks, 25 pair of White Guineas, besides a large number of our breeders in Silver P. Rocks, White Wyandottes and Buff Cochins Bantams. All of these birds are choice breeders and the prices range from \$1.50 each up. Now is the time to buy them cheap.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

NATIONAL ROSE COMB RHODE ISLAND RED CLUB.

During the poultry show held at Cincinnati in 1906 a few prominent breeders of the Rose Comb Rhode Island Red variety met and discussed the feasibility of organizing a Rose Comb Club, the result of which was an agreement to meet at the poultry show to be held January, 1907, in Boston and formulate plans for an organization.

A meeting was held January 16, in Boston, and the following list of officers was elected: President, Robert C. Tuttle, Hartford, Conn.; secretary and treasurer, John E. Davis, Marblehead, Mass.; executive committee, the president, the secretary, W. F. Hoyt, Pennacook, N. H.; Edward Walkling, West Medford, Mass.; J. Cleveland Capen, Bloomfield, Conn.; Lester Tompkins, Concord, Mass., and Walter T. Almy, New Bedford, Mass.

It is not the intention of the Rose Comb Club to in any way antagonize the Rhode Island Red Club of America, but we do hope and expect to enhance and further the interests of the rose comb variety.

In the near future we expect to offer prizes in every state that has ten members and we invite you, brother, as a breeder of the rose comb variety, to come with us.

The club voted to adopt the standard of the Rhode Island Red Club of Amer-

ica. The membership fee and dues for one year are \$1.

Address all communications to John E. Davis, secretary and treasurer, Marblehead, Mass.

RANTOUL, ILL.

Rantoul has organized a poultry association, to be known as the Champaign County Poultry Association, with the following officers: President, H. M. Leonard; vice president, Gus. Stumpf, Jr.; secretary and treasurer, Glenn Robinson; assistant secretary, J. W. Hitz; superintendent, Mord. Clark; assistant superintendent, M. D. Myers. The first annual exhibition will be held at Rantoul, Ill., December 17-21, 1907. George A. Heyl will be judge.

TITUSVILLE, PA.

The Titusville Poultry and Pet Stock Association will hold its second annual show February 4-8, 1908. Our first show was a great success and every effort will be made to make the next one of the best of the season.

T. L. Andrews, Secretary.

NORFOLK, VA.

It is officially announced that the world's greatest poultry show will take place October 15-25, 1907, at the James-

town Exposition, Norfolk, Va. Mr. J. W. A. Murkin, Jr., of Nashville, Tenn., has been appointed superintendent.

ROCHELLE, ILL.

At the annual meeting of the Rochelle Poultry and Seed Corn Association it was decided to hold the next show December 16-21, 1907, with G. D. Holden as poultry judge and W. G. Griffith as corn judge. The following officers were elected: President, C. A. Higer; vice-president, C. T. Yetter; treasurer, A. B. Shadle; secretary, R. F. Harter; assistant secretary, Jas. Ladd; show secretary, George Onley. Board of directors: Clint Meyers, F. H. Spath, Chas. Berry, Geo. Gossard, Harry Beebe. Third annual show premium list will be ready November 4, 1907.

R. F. Harter, Secretary.

SEATTLE, WASH.

To the Officers and Members of the Specialty Clubs of the United States:

We wish to call your attention to our prospective Poultry Exhibit to be held in connection with the Alaska-Yukon Pacific Exposition in 1909, and to earnestly solicit your presence in this city at that time. We want this exhibit to be the largest and best ever held in the United States, or even in the world, and we feel sure that with the good will and hearty co-operation of all loyal poultrymen we can accomplish all we hope for and make the exhibit a grand success. We expect the poultry exhibit to be one of the most interesting departments of the exposition and for this reason we think there is some inducement for the specialty clubs of the United States to hold their annual meetings in this city in 1909. We are confident that such

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Eggs for hatching from my regular matings, \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100. From exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

1902 N. 40th St., Seattle, Wash., U.S.A.

PIERCE CITY, MO.

The Peirce City-Monett Poultry Association will hold its fifth annual show December 16 to 19, 1907; C. A. Emry of Carthage, Mo., judge. At the annual meeting the following officers were elected for the ensuing year: H. O. Abernathy, president; H. Kerkemeyer, first vice-president; L. A. English, second vice-president; Thomas Carlin, secretary, and J. E. Coppock, treasurer. The following compose the executive committee: J. R. Dempsey, Jas. Doyle, Mrs. C. W. Haynes, Jos. Kuntz, P. O. Snyder and the president and secretary.

A Believer in Thoroughbreds.

Oklahoma, O. T., April 5, 1907.
Editor American Poultry Journal:

I have been a reader of your journal since it was first published, and a lover of chickens all my life, and for thirty years have raised them and have always kept thorough breeds of whatever strain I fancied; I believe in thorough breeds, whether of cattle, horses, hogs, dogs or chickens. I do not keep chickens as a business but for my own use and enjoyment, but I like the best and try just as hard to get and keep the best as anybody. I never enter chickens for exhibition unless it is simply to fill out and help to make the show a success, nor do I keep them for sale. I have said this much that no one may accuse me of a mercenary motive in writing this communication. For fifteen years I have kept nothing but Barred Plymouth Rocks and now, after all these years, I seem to have gotten further from my ideal instead of closer to it, and I would like to understand why that is? I attribute it to the system of double mating adopted by so many of the noted professionals. In starting I got eggs from some of the best men in the country, after writing to many and getting descriptions of what they had. I got along fairly well, still, I could not produce any uniformity in color, coloring to skin or color in legs and beaks, so two or three years ago I saw some ads of fowls guaranteed barred to skin and pure yellow legs and beaks—large size and all the good points I wanted—so I got eggs from two of these noted and reputable exhibition breeders. I selected the only two cockerels that were barred to the skin and fifteen of the best pullets of these hatches and raised 150 chickens.

The dark stags nearly all had green legs and dark beaks and the barring in all went nearer the skin than did that of the light ones. The light cockerels all had yellow legs and beaks, but the barring on nearly all of them was irregular and the feathers on the shanks and small of the back were white half their length, and all of them had combs too large. The light colored pullets were all nicely marked, yellow legs and beaks and well barred, but few barred to the skin.

Amatite

INSTEAD OF SHINGLES

In the last few years the price of lumber has more than doubled in cost. Before the increase the price was higher than the average farmer could pay. The use of shingles, therefore, has been growing less and less, and the progressive farmer has been using Amatite instead.

What is Amatite? It is the mineral surfaced roofing that costs less and wears longer than the "Paint-me-every-two-years-or-leak" kind.

It's waterproof, weatherproof, stormproof. It's the one with a real mineral surface

that makes painting and coating entirely unnecessary. Any one can lay it by simply following the directions which go with every roll. We send along enough nails and cement for laps to complete the job.

FREE SAMPLE

To any one interested we will send, upon request, a Sample and illustrated Booklet telling all about Amatite. We want you to see how good this roofing really is. Write to-day and keep up with the times.

COLUMBIAN WYANDOTTES

WE OFFER EGGS FOR HATCHING from Columbian Wyandottes, selected with the greatest care. These birds are magnificent specimens of this most popular fowl. The male heading these pens are true Wyandotte in shape and form, each having exceedingly well colored wings, hackle and tail. The females are as they should be. We fully guarantee this stock, unapproached in size, style and finish. Eggs \$10 per setting straight.

WHITE WYANDOTTES

For years we have been supplying breeders and exhibitors with extra choice White Wyandottes. Our breeding pens contain this kind of stock properly mated. Eggs \$5 per setting, two for \$8, three for \$10.

HOUDANS

Line bred since 1874. The standard of Houdan excellence in America. There is not a winning strain of Houdans in America today, not one, but what has been built up on Rigg stock. Eggs \$5 per setting straight.

THOS. F. RIGG, IOWA FALLS, IOWA

\$8 SPECIAL \$8

Twenty Thoroughbred Chicks and an All-Metal Hatcher or Brooder.

The machines are made entirely of metal and are strictly fire-proof. They are the only machines of the kind on the market. Each machine is equipped with a Hydro safety lamp and a double wafer self-regulator, which makes

hatching or brooding easy with a Cycle machine. They are next to the old hen and will hatch more chicks than any other incubator on the market. In order to introduce the Cycle Hatchers and Brooders I am giving 20 thoroughbred chicks, hatched in a Cycle machine and a Cycle Hatcher or Brooder for the small sum of \$8. Order at once. Catalogs free. The Cycle Hatchery, 879 N. Leavitt St., Chicago

Why Poultry Die

An enormous amount of money is lost to poultrymen through simple neglect. Hens die for want of a proper tonic to prevent indigestion or ward off disease. All fowls, especially those in confinement, need a corrective or tonic—something to assist digestion, and compel a healthy activity of each organ.

DR. HESS Poultry PAN-A-CE-A

is such a tonic. It contains iron for the blood, and nitrates to eliminate poisonous matter from the system. Poultry Pan-a-ce-a is not a stimulant; it acts in a natural manner, compelling the organs of digestion to convert the largest possible amount of food into bone, muscle, feathers, eggs, etc. Hence, it makes the hen healthy and prolific.

Dr. Hess Poultry Pan-a-ce-a has high medicinal properties, being a cure for gapes, cholera, roup, indigestion, etc., and by its special germicidal principle, it destroys the cause of nearly all poultry disease. It is the prescription of Dr. Hess (M.D., D. V. S.) and is endorsed by the leading poultry associations in United States and Canada. **Sold on a written guarantee. It costs but a penny a day for 30 fowls.**

DR. HESS & CLARK, Ashland, Ohio.
Instant Louse Killer Kills Lice.

The dark pullets on the other hand, while barred to the skin, had invariably dark beaks, some had willow legs, some green and some light colored with dark spots on them, and at a year old all the dark ones, both hens and cocks, had shiny black feathers scattered over them. Nearly all the dark pullets from my last year's raising are barred to the skin, but many of the light ones are not—in fact, I did not have many light pullets. I have half a dozen dark stags barred to the skin, but only one or two light ones so barred. I am not criticising the men I got my stock of, but the system they follow of double mating. The double mating system is no doubt the best for raising exhibition fowls, that is, you can more certainly count on getting exhibition fowls than by the single mating system; or I might rather say you get a bigger per cent of them that way; but the chief value of that system is to the professional exhibition breeder. To the great majority of people who keep chickens the purchase of stock from the double mating system will prove a dismal failure and a disappointment. Nine out of ten people who raise chickens, except the professionals, are not prepared to and will not go to the expense and trouble of keeping yards for the double mating system, if there were no other objection to it. One prominent professional in his ad says "utility breeders or breeders who do not wish to carry two lines of blood may select either a light or a dark mating, and a more even flock may be produced than by trying to breed standard colored birds of both sexes from the same yard." That statement is in itself enough to condemn the double mating system for the utility breeders. No standard should be adopted that the ordinary method of mating other breeds will not when applied to Barred Rocks produce standard birds. As I view it, the utility breeder of Barred Rocks would like something near uniformity in color; he wants yellow legs and beaks, he does not want them spotted, he wants the feathers barred to the skin, he wants some uniformity in size of comb and gills, he wants good size and wants the hens to lay. He wants to get the same qualities in the dark as the light colors and wants the same uniformity in coloring and feather barring, whether dark or light. All of these things no one can guarantee in any breed, but you can count on fewer of them in breeding from stock of the double mating system than in any other breed or than in the single mating system of Barred Rocks.

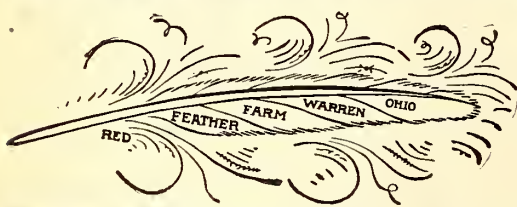

With the utility breeders the Barred Rocks are the most popular of any breed of chickens, and it does seem strange that men who have made the business a study can not perfect the breed so that the ordinary breeder can buy stock and raise standard birds in the ordinary way; if it can not be done it is evident that what the average breeder likes and wants he can not afford to have, for if you get light colored stock and breed all light colors you will soon have a white flock instead of a barred one, and on the other hand if you take the dark ones and breed them exclusively you will soon have a black flock.

According to my observation and experience, the breeder who keeps a flock of Barred Rocks of good size and laying qualities, that can be bred with fair uniformity in color and barred to the skin, from the single mating system, with a fair average of standard birds, is the man for the people; he is the man

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1 1/4 to 1 1/2 lbs. in seven weeks on it. No science required to feed my system. Failure impossible. Start right. Circular and testimonials free. Write today and stop that big feed bill.

EDGAR BRIGGS, Box A

NEW ROCHELLE, N. Y.

the utility breeder wants to patronize.

If this can not be done then the utility breeder wants to hunt up new favorites, for the double mating system will always prove a disappointment to that class. I believe this want of uniformity in color of feathers, legs and beaks, etc., is due entirely to the method of breeding in the double mating system; the colors of the original crosses seem more prone to crop out and I don't believe any uniformity in the breed will ever be obtained by that system. Follow the single mating system, select your best specimens to breed and keep this up and in time you will, I believe, have birds that will breed as true as in any other breed. Let the exhibition breeders keep the double mating system, for it is good only for exhibition purposes.

Whit M. Grant.

Editor American Poultry Journal:

I am sending you copy of an egg laying contest I have been conducting in a small way with the material in my yard during the month of March. All had an even start and none were handicapped by extra weight or lack of condition, so I believe the test is a fair sample of what each breed can do under the same conditions of handling and feeding and at a time of year when laying had not become heavy.

All breeds have been subject to the same feed and attention, and all stand strictly on their individual merits as egg producers, with no favoritism shown any breed. Pen No. 17, White Leghorn pullets, were beaten by both No. 5 and No. 18, composed of hens.

Pen No. 1—S. C. White Leghorn: Hens, 17; yield, 262; average, 15.4.

Pen No. 2—S. C. Brown Leghorn: Hens, 15; yield, 202; average, 13.5.

Pen No. 3—S. C. Black Minorca: Hens, 20; yield, 295; average, 14.8.

Pen No. 4—Barred Plymouth Rock: Hens, 19; yield, 394; average, 21.

Pen No. 5—S. C. White Leghorn: Hens, 40; yield, 762; average, 19.

Pen No. 6—Barred Plymouth Rock: Hens, 30; yield, 449; average, 15.

Pen No. 7—R. C. Brown Leghorn: Hens, 5; yield, 62; average, 12.4.

Pen No. 8—R. C. White Leghorn: Hens, 11; yield, 183; average, 16.6.

Pen No. 9—S. C. Buff Leghorn: Hens, 10; yield, 90; average, 9.

Pen No. 10—S. C. Pyle Leghorn: Hens, 9; yield, 132; average, 14.7.

Pen No. 11—Light Brahma: Hens, 12; yield, 224; average, 18.7.

Pen No. 12—Silver Wyandotte: Hens, 8; yield, 140; average, 17.5.

Pen No. 13—White Plymouth Rock: Hens, 10; yield, 136; average, 13.6.

Pen No. 14—White Wyandotte: Hens, 10; yield, 174; average, 17.4.

Pen No. 15—Buff Wyandotte: Hens, 11; yield, 182; average, 16.5.

Pen No. 16—S. C. Rhode Island Reds: Hens, 10; yield, 221; average, 22.

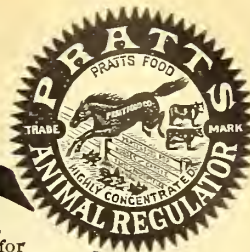

Pen No. 17—S. C. White Leghorn: Hens, 40; yield, 613; average, 16.

Pen No. 18—S. C. White Leghorn: Hens, 30; yield, 561; average, 18.7.

The size of the eggs laid by the different breeds ranges about as follows: Black Minorca, Light Brahma, White Plymouth Rock, Single Comb White Leghorn, Brown Leghorn, Pyle Leghorn, Buff Leghorn, Silver Wyandotte, White Wyandotte, Buff Wyandotte, Barred Plymouth Rock, Rose Comb White and Brown Leghorns and Rhode Island Reds.

MARKS OF QUALITY

These trade-marks are known throughout the world and stand for the best Animal and Poultry Regulators made. Pratt's Food for horses and cattle is the original stock food of America. Its merit is unquestioned, for it has been used for over 35 years with an ever increasing demand and bought over and over again by the same consumers. No one, using it according to directions, can fail to secure good results. It has been widely imitated but never equaled. You want your horses to be strong, vigorous and healthy; your cows to give more and richer milk, and your steers and hogs to grow rapidly and fatten quickly. Those conditions can be obtained, without any expensive tests or trouble, by simply giving your stock daily

Pratts

Food or Animal Regulator

mixed with the regular ration. Pratt's Animal Regulator is Pratt's Food highly concentrated, given in a smaller dose but producing exactly the same results. These preparations are regulators, appetizers and digestive tonics and supply just what stock need when forced and fed for profit, and to-day are recommended by the best authorities and are used by the most conservative and successful feeders.

Every package and bag guaranteed

PRIZE WINNERS FOR SALE CHEAP

By the Great Central Poultry Farm

In eight weeks our birds have won 3000 prizes at state and county fairs. This indicates the quality of our stock. There is no better in the country. As breeders we fully understand our business. We ship nothing but standard birds. They are fully guaranteed and warranted to reach our customers at the nearest express office in good condition. If any fowl fails to do this we duplicate the bird. Eggs in season from all our breeds. We are now booking orders for stock, shipping daily.

We have recently purchased the entire stock of one of the largest breeders of Partridge Cochins in the United States, and we are able to furnish prize winners in this variety. Send for our special prices. We offer the following varieties to our customers:

Light Brahmas,
 Dark Brahmas,
 Partridge Cochins,
 Buff Cochins,
 * White Cochins,
 * Black Cochins,
 Black Langshans,
 Barred Plymouth Rocks,
 *Pea Comb Barred P. Rocks,
 White Plymouth Rocks,
 Buff Plymouth Rocks,
 * White Face Black Spanish,
 * Blue Andalusians,
 Black Minorcas,
 Rose Comb Black Minorcas,

White Minorcas,
 Single Comb Brown Leghorns,
 Rose Comb Brown Leghorns,
 Single Comb White Leghorns,
 Rose Comb White Leghorns,
 Buff Leghorns,
 * English Red Caps,
 Silver Spangled Hamburgs,
 American Dominiques,
 Black Javas,
 Silver Laced Wyandottes,
 Golden Laced Wyandottes,
 White Wyandottes,
 Buff Wyandottes,
 *Single Comb Buff Orpingtons,

Buckeye Reds,
 Rhode Island Reds.

*Houdans,
 *White Crested Black Polish,
 *Cornish Indian Games,
 *White Indian Games,
 *Black Breasted Red Games,
 *Red Pyle Games,
 *Buff Cochins Bantams,
 *White Cochins Bantams,
 *Golden Sebright Bantams,
 *B. B. Red Game Bantams,
 *Black Cochins Bantams,
 *Partridge Cochins Bantams,

Stock—single birds, \$2.50; pairs, \$4.50; trios, \$6; pens, \$10. Mammoth Pekin Ducks; Stock—single birds, \$2; pairs, \$4; trios, \$6; pens, \$10. Toulouse Geese: Stock—single birds, \$4; pairs, \$7; trios, \$10; pens, \$16. Mammoth Bronze and White Holland Turkeys: Single birds, \$5; pairs, \$9; trios, \$12; pens, \$18. Prices for varieties marked with a star as follows: Single birds, \$4; pairs, \$7; trios, \$10.

Our prices for eggs are as follows: Eggs from all varieties marked with a star, \$2.50 per setting or \$4.50 for two settings. Eggs from all other varieties, \$1.50 per setting; \$2.50 for two settings, with the exception of the following varieties, namely, Partridge Plymouth Rocks, Silver Pencilled P. Rocks, Partridge Wyandottes, Silver P. Wyandottes, Columbian Wyandottes, Golden Polish and Silver Polish. Eggs from these birds we will furnish at \$2.50 per setting. We also furnish eggs from White and Pearl Guineas at \$2 per setting of 13 eggs. Of these nine last named varieties we will sell eggs only.

We have thousands of birds bred on the same line as these prize winners. Do not hesitate to order direct from this ad. Send for our special prices, also for our free catalog. Enclose 10c stamp to cover mailing.

Write us for circulars and special prices on our improved Great Central Incubators and Brooders, the most dependable and surest hatch machine on the market. Insure your success by hatching our eggs in our incubators and raising the chicks in our brooders. This is a winning combination. Address all our correspondence to Freeport.

THE F. W. NIESMAN CO., Box 40, Freeport, Ill.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 325 Dearborn Street, Chicago, Ill.

SPEAKING OF HASH.

A clever little friend of mine, who can talk wisely and well upon many subjects, and who has a way of keeping her hearers busy in following her from dressmaking to religion, and from theosophy to the subject of hired girls, has a way of saying, when about to make some radical change in the conversation, "Speaking of hash." The aptness of the remark is obvious. Did you ever stop to think of the range of subjects under discussion during even a little afternoon call? And if the occasion includes a number of women, the variety will certainly give enough of the spice of life to prove the old adage. And did you ever notice how many beautiful thoughts are brought out which, if taken to heart, will make life brighter and better for every woman present? The hash part comes in when the helpful, the practical and the indifferent topics are sorted out, the worthless ones forgotten and the others put by in a convenient corner of the memory for future reference. If every woman were to keep a little note book and jot down the good things she hears in the course of a year she would have quite a library by the end of the twelve months.

EXPERIENCE DEPARTMENT.

Mrs. A. C. M., of Kansas City, sends a helpful thought for those who, while loving to make friends and have a permanent abiding place, are yet obliged by stress of circumstances to make frequent moves. She says: "When I found that my husband's business would mean a yearly change of location I made up my mind to see only the good in each new home. I have found that every city has its own peculiar advantages, that there are pleasant neighbors everywhere, if I will go half way to meet them, and that there is always time to plant a few flowers." Mrs. M.'s philosophy, if carried out by every one, would make each neighborhood a little center of love and beauty, and her "recipe" is recommended to readers of the American Poultry Journal.

Mrs. M. B. W. of Denver says: "I have recently bought a three-burner gas plate, to use in the daily cooking, and my first problem was that of keeping the food warm during the time between cooking and serving. I have no help, and dislike to run out to the kitchen and stop to reheat things before bringing them in to the dinner table. Necessity being the mother of invention, I discov-

ered that if the tins are set directly under the burner which is cooking other food the contents will keep piping hot. Dishes may be heated in the same way, crackers crisped, and biscuits rewarmed if sprinkled lightly with cold water, put in one tin and covered closely with another. I also found by sad experience that one must be careful not to let the rubber tube which carries the gas get caught under a leg of the gas stove, close to the flame. Rubber has a way of melting which is somewhat startling to the novice in gas."

Mrs. H. J. K., of Sandusky, Ohio, tells of her method of frying mashed potatoes. She breaks an egg into the dish of cold mashed potatoes and whips them thoroughly together, then adds a little milk, a scant dessert spoonful of flour and half a teaspoonful of baking powder, molds them into very thin, flat cakes, the thinner the better, dusts them with flour, and fries them in a very hot spider, with half lard and half butter. They are principally crisp, brown crust when done.

Miss L. H., of Pittsburg, tells of her exceedingly simple way of making bread, which is certainly a labor saver. She breaks a compressed yeast cake into a cup of lukewarm water and adds a tablespoonful of sugar. This she places in a warm place at supper time and leaves until just before bed time, when it will have risen and formed a yeasty mass, like liquid yeast. Into a quart of warm water she puts a tablespoonful of lard and one of salt. Into this she stirs the yeast and pours it into three pints of flour, which has been warmed through. This she kneads thoroughly, adding just as little flour as possible. It must be very soft and is better if kneaded right in the dish. After it is thoroughly kneaded and smooth it is tightly covered, and covered again with an old, clean tablecloth, and placed in the oven

WHAT THE POULTRY WORLD HAS BEEN WAITING FOR

An Incubator in Which the Heat is Applied to the top of the Eggs. This is Nature's way, and there is no other natural way. The eggs are surrounded by fresh air, moderately, correctly warmed. No hot box egg chamber; no burned out air; no feverish, thirsty chicks; no subsequent chills and bowel trouble. Largest hatches much the hardest chicks.

You want to know about the incubator that supplies every condition that Nature supplies, and in the way that Nature supplies it.

You want to use the most convenient machine yet devised. Ours is a pleasure to operate. With new self-supporting egg drawer you never lift or carry a tray; you never spill an egg. Our thermometer arrangement is the handiest and best ever made. **You want to own the best constructed, most durable and finest appearing incubator made.** It will never wear out. It embodies the best points of all classes of incubators in addition to its own exclusive features. The prices are right. The machine is guaranteed. You take no risk. Investigate our All-Purpose Brooder. Entirely new in design. Hovers just as the hen hovers. Can be used indoors and out, in a colony house, piano box, or anywhere you want to keep a brood. Can be moved instantly from one place to another. Always ready for business. Suited to everybody's needs. Efficient, economical. Write for our Incubator book. It is honestly devoted to setting forth the facts and principles of incubation. Free if you mention A. P. J.

CHAMBERS INCUBATOR COMPANY

SHELBYVILLE, INDIANA

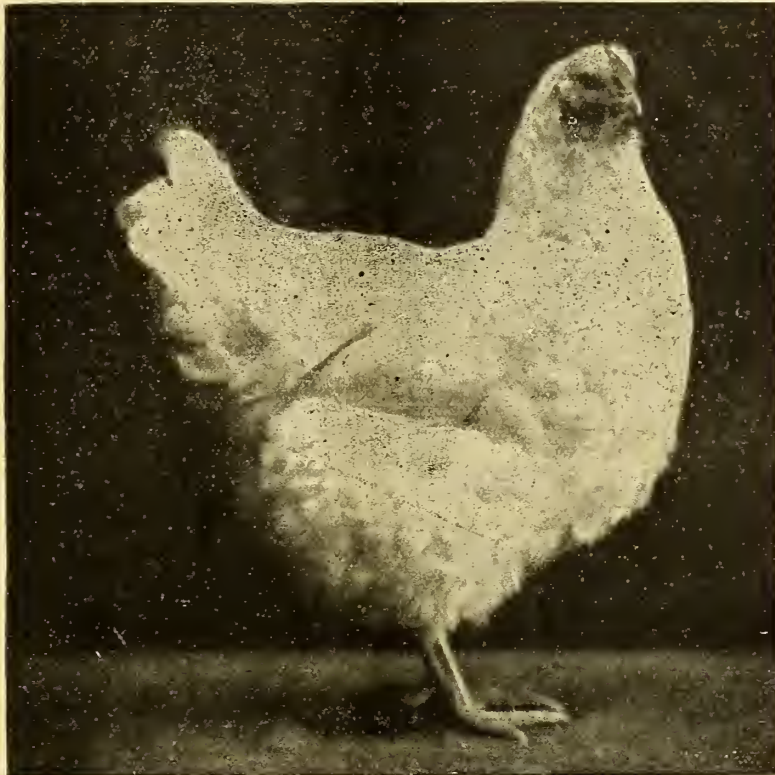

of the range, after the fire has died down. Here it keeps warm all night and in the morning all that is necessary is to cut it into loaves, kneading only two or three minutes. Let it rise again and bake. If it is made into loaves at seven o'clock it will be out of the oven by nine. Delicious rolls or biscuits can be made from part of the sponge by adding a little butter and sugar, kneading a few minutes, rising in the loaf, rolling into biscuits or "pocketbooks," and letting them rise again before baking.

Mrs. A. J. L. tells of her method of making conserve from cooked fruit. She slices and quarters four oranges, adds four pounds or eight cups of granulated sugar and two pounds of seeded and chopped raisins and cooks them until they are thoroughly done and the orange peel is transparent. She drains the juice from a can or two of cherries or currants and cooks it down until it is reduced one-half, then simmers the cher-

and the home life will not be demoralized."

POTATO VARIATIONS.

Escalloped Potatoes—To make delicious escalloped potatoes, take one quart of boiled potatoes, sliced, one and a half pints of water, a heaping gill of dried bread crumbs, three tablespoonfuls of butter, one teaspoonful each of minced onion and carrot, one scant teaspoonful of salt, a scant half teaspoonful of pepper, one teaspoonful of beef extract dissolved in two tablespoonfuls of boiling water. To prepare, season the potatoes with half the salt and pepper, put the onion and two and a half tablespoonfuls of butter in the frying pan; cook until the onion turns a light brown; then add the flour, stirring until very smooth. Slowly add the water and stir until it boils, then add the beef extract, the rest of the salt and pepper. Simmer for five

"Kentucky Queen." White Wyandotte hen. Score 96½ by Pierce. Her dam and granddam scored 95¼ and 95¼, respectively. Bred and owned by Ira B. Sleet, Warsaw, Ky.

ries or currants in it a few minutes, adds the rest of the ingredients and lets it boil up thoroughly. Those who have eaten her conserve say that it is just as good as that made from fresh fruit. Sometimes she adds nuts, chopped medium fine, and she has found that conserve made with canned grapes and nuts is delicious.

Mrs. C. L. W., of Otsego, Mich., says: "I have found it very helpful, when breaking in a new hired girl, to let the ordinary routine of work take care of itself for a few days, and teach her first of all what to do in emergencies. I show her my way of getting up a simple meal, broiling steak, making good coffee, cooking a custard and preparing a few vegetables. Then, if company comes unexpectedly, or there is illness in the family, she will be able to serve a meal to the satisfaction of every one concerned,

minutes, put in your baking dish a layer of sauce, then a layer of potatoes, another of sauce, then potatoes. Cover this with the bread crumbs, pour over the remainder of the sauce and add the rest of the butter in bits over the top. Bake in hot oven a half hour.

Browned Sweet Potatoes—Boil the potatoes until tender, peel them, cut in slices lengthwise, spread with butter, sprinkle with salt and pepper lightly, lay on a buttered pan and brown in the oven.

Potatoes and Onions—Pare some rather small potatoes, cut each in half and trim until round. Peel an equal number of small white onions. Arrange them in a frying pan with about one tablespoonful of butter, cover closely and set at the side of the fire, shaking occasionally for fifteen minutes. Pour in sufficient boiling water to half cover them, add salt and pepper, cover again and cook

Pearl Grit

For Growing Chicks

Keep the growing chicks plentifully supplied with Pearl Grit. It's splendid for young birds and aids their rapid development into early layers and plump marketable fowls. Pearl Grit furnishes needed material for bone development, growth of plumage and other vital processes which must go on rapidly during the period of growth.

Pearl Grit is prepared in sizes suitable for all ages from the tiny chick to the largest fowl and is good for all.

FOR LAYING HENS

Pearl Grit is a superior article. It contains a large percentage of Calcium Carbonate (Lime) which is one of the finest shell making materials known. Laying hens are attracted by the lime-like whiteness of Pearl Grit and eat it greedily. It pays to have it always within their reach. The egg basket bears witness to the wisdom of this policy.

Pearl Grit serves a double purpose—it grinds and makes shell.

SHARPLES TUBULAR SEPARATOR

Besides you can skim the milk immediately after milking—save the handling and the expense of storage. A good milk-house costs more than a Tubular and isn't half so profitable—even if you already have the milk-house it will pay in labor saved, in crocks and pans saved, and the increase in cream will be all clear profit. Of course, when you buy a separator, you want the one that will get you the most profit—you'll want the Tubular—the reasons why are all given in a book which you will want and which we want to send to you free if you will only write for it, ask for book H. 205

Mr. Mac Tuttle, Danville, Ill., says "The first week we used the Tubular we made a gain of 12 lbs. of butter from five cows."

WHITE WYANDOTTES "White Frost" STRAIN

I did not win ALL of the prizes at ALL of the shows during the past season, but I DID win the following during the month of December, 1906 at three shows: Nine 1sts, eight 2ds, five 3ds, four 4ths, two 5ths and fourteen specials have been won by this strain during the show season just passed. Full list of winnings, together with description of pens mated, in catalogue now ready, which I am anxious to send to those interested. Eggs from six grand yards at \$3 per thirteen.

CHARLES D. CLEVELAND,

Sunnybrook Farm,

West Orange, N. J.

slowly for half an hour. Add one teaspoonful of lemon juice, turn into a hot dish and serve.

Potato Pasty.—To two cupfuls of cold mashed potato, prepared quite moist, add two well beaten eggs. Butter a baking dish and put half of the potato in it. Spread the minced meat over this, adding a little grated onion, if the flavor is liked, then the remainder of the potato. Sprinkle fine cracker crumbs over the top and bake in a quick oven. It should rise a little and brown nicely over the top.

FOR THE DINNER TABLE.

Fried Cutlets or Stewed Steak.—A slice one and one-half to two inches thick is cut in pieces suitable for individual serving, and all undesirable portions removed.

Then broil over a quick fire till well browned, but not cooked throughout. Put the pieces then in a tomato sauce or a brown gravy and cover and cook for about two hours, or till tender. This is a good way to serve the flesh ends of sirloin steak.

Sometimes the steaks may be stewed first, then egged and crumbed, and fried in deep fat.

Beef Rolls.—Cut the meat in pieces three by four inches, spread thickly with sausage meat, or chopped onion, or a stuffing made of seasoned crumbs. Roll and tie, or skewer with smooth wooden toothpicks. Then proceed as with the cutlets.

Breakfast Meat Cakes.—For the average family use a pound of meat after all stringy portions are removed. Chop fine, season with one teaspoonful of salt, a little pepper, and one teaspoonful of onion juice. If liked, a little powdered sage may be added and an ounce of fat pork chopped with the meat. Dip the hands in cold water and shape the meat into about ten solid oval cakes an inch thick. In this shape they may stand in a cool place for twenty-four hours without injury.

When ready to cook, dip the cakes in melted butter and broil, or fry, and serve with tomato sauce. If any are left serve cold, cut in thin slices; they are also good filling for sandwiches.

SOME SIMPLE DESSERTS.

A Plain Pudding.—Steam a few slices of stale bread, spread them with stewed or steamed apples, sprinkle a little sugar and set in the oven to brown quickly. Serve with hard or liquid sauce.

Rice Pudding.—Wash a scant half cup of the best rice, put it in a pudding dish, add one quart of rich milk, half teaspoonful of salt, a little nutmeg, scant half cup of sugar and half a cup of raisins if you wish. Mix all well together and bake very slowly until done and creamy. Stir once or twice very carefully until the rice is thoroughly swelled, and if milk absorbs too rapidly add a little more milk or hot water.

Cabinet Pudding.—Beat two eggs, add a pint and a half of milk to them, grease a pudding mold, sprinkle the bottom with raisins or chopped citron, then put in a layer of cake crumbs and a sprinkle of fruit, and continue with cake and fruit until one quart of crumbs are used; add one teaspoonful of vanilla extract and a pinch of salt to the eggs. Pour the liquid over the crumbs and put the cover on the mold. Let stand fifteen minutes, then place the mold in a pan of boiling

water and boil for one hour; turn out and serve with lemon sauce.

Danish Mold—Thoroughly wash a teaspoonful of pearl tapioca, picking out the dark pieces, if any. Set it in a saucepan and cover with a pint and one-half of boiling water; stir constantly while it cooks until transparent, probably about an hour; add a good pinch of salt, a teacupful of red currant or raspberry jelly and four ounces of granulated sugar. When all is dissolved pour into a wet mold and when cold turn out and serve with custard.

SUGGESTIONS FOR THE HOUSEWIFE.

Strong, hot vinegar will remove paint from window glass.

Place an apple in the cake box and cake will keep moist much longer.

If you get too much bluing in the rinsing water put in a little household ammonia.

A little milk added to the water in which silver is washed will help to keep it bright.

A little flour spread over the top of cakes before they are iced will prevent the icing from running off.

Use a little ammonia in the dish water when washing glassware. It will make it sparkle like cut glass.

Sausages should be served with apple sauce or baked tomatoes. Either makes them more easily digested.

When cleaning knives mix a tiny bit of carbonate of soda with the bath-brick and they will polish more easily.

Cereals are seldom overcooked, but rather undercooked. Thus always allow plenty of time in preparing cereals.

ORANGE LOAF CAKE.

Grate the rind of one orange on a piece of cheesecloth put over a cup. Squeeze the juice on the grated rind. Fill the cup with water, sift two cups of flour with a teaspoonful of baking powder. Beat the whites of three eggs stiff. Beat the yolks of five eggs and add to them two cups of granulated sugar creamed with half a cup of butter and a pinch of salt. Into the orange water stir the egg and sugar, then fold in alternately the flour and stiffened whites. Bake for one and a half hours in a slow oven. Cover the cake for the first half hour. Do not grease the pan around the sides.

For a simple cough cure roast a medium-sized lemon; when hot through cut and press the juice upon three ounces of pulverized sugar. Take a spoonful whenever the cough is troublesome.

HOT WEATHER AHEAD.

How to Keep the Kitchen Cool and Comfortable in Mid-Summer.

Many a housewife is wondering how she will pass through the coming summer months with the stove she well knows will make the kitchen unbearably hot—to say nothing of the dirt, dust and ashes that will add to the discomfort.

There is a way out of it all—a way that not only lessens the work and keeps the kitchen cool, but that also reduces fuel expense. This convenience, comfort and economy is all effected by the New Perfection Wick Blue Flame Oil Cook Stove, an oil stove so superior to other makes that it is fast replacing the coal and wood range, the old-fashioned oil stove, and in many cases the gas stove.

Anyone who has had to wait ten or fifteen minutes for the fire to get started will appreciate the New Perfection, which gives a strong working flame at moment of lighting. "Blue Flame" means the hottest and cleanest flame produced by any stove. The flame is always under immediate control and can be raised or lowered instantly. The convenience of this will be understood when it is considered that while the flame of one burner is boiling the kettle or roasting a large joint, that of another can be reduced to simmering point—in this way enabling the housewife to cook a variety of dishes at one time.

Then the comfort of it. While the flame of the New Perfection is intensely hot, yet the heat is not thrown off into the kitchen, because it is concentrated by blue-enameled chimneys.

On washing and ironing days the comfort and convenience of the New Perfection will be greatly appreciated. It gives best results in the least time, and does away with all coal and wood carrying and

the many other disagreeable jobs that have to be done with other stoves. The New Perfection is made in three sizes, with one, two and three burners, and is warranted to give full satisfaction.

Another home comfort is the Rayo Lamp, which produces a light of unusual brightness, yet soft and mellow—a light that will not hurt the eyes. The Rayo Lamp can be used in any room, whether it be library, dining room, parlor or bedroom. It is highly ornamental, being made of brass throughout and beautifully nicked. Every lamp is warranted and makes a valuable and handsome addition to any home.

The New Perfection Wick Blue Flame Oil Cook Stove and the Rayo Lamp are two real essentials to home comfort. Their easy operation, absolute safety and handsome appearance commend them wherever stoves and lamps are used.

POULTRY VERMIN.

The failures to make poultry keeping successful are mostly caused by poultry vermin. Some kinds of vermin suck the blood; others live in the air-sacks of the fowls, and still others live upon or within the feathers.

Hens with vermin cannot be made to lay well; fowls with them cannot thrive as they should. Unhealthy, unthrifty or weak fowls are more subject to parasites than well ones, and parasites make the weak weaker.

Authorities estimate that the second generation from a single louse may number 2,500 individuals, and that the third generation may reach the enormous number of 125,000. As all of these may be produced in the course of eight weeks, how important it is to cure the trouble in the beginning. Prevention is still more important—and much easier.

When it is suggested to a poultry keeper that he may have lice in his flock he usually answers that he does not think so,

and will pick up a fowl to prove it. If a visit to the coop is made in the daytime the roost is often found with little red mites, which hang in clusters under roosts, in the cracks; in fact, in every conceivable place in the house. But at night all these mites go to the fowls.

Examine one of these mites and see the amount of blood you will find. No wonder so many hens do not lay well. No wonder the balance is on the wrong side of the poultry ledger. No wonder so many poultry owners are discouraged.

But there is no reason for discouragement if the premises are kept lice-proof. To accomplish this dust fowls and nests occasionally with *Rust's Lice Killing Powder*, and brush cracks, crevices, roosts, roost supports, dropping boards, etc., with *Rust's Liquid Lice Killer*. For chicks with head lice use *Rust's Lice Killing Ointment*.

For full description of the above write direct to the manufacturers, William Rust & Sons, New Brunswick, N. J. (established 1854), for their interesting free booklet, full of valuable information for poultry keepers.

IMPORTANCE OF GRIT AS A POULTRY RATION.

A hen's digestive system is essentially like our own, although on first thought it may not seem so. The different organs are all there, however, but arranged quite differently than in the human body.

Take the teeth for instance, one smiles at the mention of "hen's teeth," but she's got them just the same—*must* have them, in fact, to digest food properly. This fact is often overlooked by poultry raisers who can't understand what keeps their profits down in spite of careful feeding and attention.

A hen's teeth are in her stomach, or gizzard, as we commonly call it. They consist of the pebbles, sand, etc., which must

NATURAL

INCUBATORS
& BROODERS

The best machine made because nearest to nature. Made of paper—best non-conductor of heat and cold. Lighter than wood, fully as strong and far more durable. Will not warp or shrink—no seams to open. Not subject to climatic changes, tons of fresh air. Natural air conditions. Having natural air conditions overcomes the moisture troubles and no artificial moisture is required. The NATURAL will produce the strongest, healthiest and most vigorous chicks possible.

The NATURAL BROODER, constructed on the same principles, will raise the chicks. No fumes or gases in hover room, and air conditions are right. Hover is so constructed that crowding is impossible. Chicks get the warmth from the top, the same as under the hen; no floor heat to cause leg weakness.

COMBINATION BROODER AND COLONY HOUSE. Chicks are put in this house from incubator, and need not be moved until put in their laying and winter quarters; it can be used as a laying house as well if required. This overcomes the trouble of teaching young chicks to a new house, which is often troublesome. The brooder house is transposed into a colony house by removing inside fixtures only.

Prices cheapest, consistent with excellency of product. Machines are result of twenty-five years' practical experience. WRITE FOR CATALOGUE AND PRICES. Information free on all poultry matters. Address

R. N. OLIPHANT, General Manager

::

12 Escher St., TRENTON, N. J

be provided before she can thoroughly masticate and assimilate her food. For most satisfactory results the grit must be hard with sharp edges and contain the elements necessary for egg-making processes.

Such grit is seldom accessible to poultry unless supplied regularly as a ration.

In this connection attention is directed to the advertisement of the Lopez Grit Company in this issue. Their claims for Lopez Grit are most convincing and at least warrant a request for the free sample which they offer. Mention this paper when writing and address their main office and quarry at Wilkes-Barre, Pa.

POTATO PROFITS DOUBLED.

The fundamental scientific principles underlying the successful growing of large and unusually profitable potato crops are simply and admirably stated in the little book, "The Acme of Potato Profit," which everyone of our readers should have. It takes up particularly the subjects of soils, their preparation, and the planting of the seed—the things which most affect the success of the crop. It tells how to cut down the expense of planting, how to insure a strong, even stand, what are the faults of the different methods of planting and how to avoid them.

It tells of the one method of planting that can secure perfect results, and how this is done with the Acme Hand Potato Planter at a cost of but \$1. It all makes a story so interesting and instructive, a story so clearly and simply told that our readers should not fail to read it.

"The Acme of Potato Profit" is sent free by the Potato Implement Company, of Traverse City, Mich., Box 528.

WRITE FOR THE ROOF BOOK.

The Heppes Co. of Chicago Will Send You Copy Free, Postpaid.

The Roof Book covers the whole subject of Roofs for Residences, Barns, Cribbs, Poultry Houses, Outbuildings, Stores and Factories. You can get a free copy by simply asking for it.

With the aid of the illustrated Roof Book you can lay a waterproof and fire-resisting roof on any kind of a building and be absolutely sure of a handsome, economical and satisfactory job. The Roof Book tells how to make Valleys, Gutters, etc.

Gives directions for making the Cuttings and Flashings around chimneys, skylights and firewalls. How to make all joints watertight. How to Measure a Roof. How to Cover Old Shingle Roofs. How to Make Poultry Houses Vermin Proof. No matter what you want to know about roofs, you'll find it all in the Roof Book. It explains the waterproofing, toughening and flint coating processes that make our famous NO-TAR ROOFING safe, durable and economical.

No-Tar Roofing is cheaper and better than shingles, steel, iron and other roofing material. Keeps any building warm in winter and cool in summer. Unsurpassed for sid-

Bred, owned and exhibited by George W. Tracey, Kinderhook, N. Y.

ing as well as roofs of poultry and stock buildings. It is entirely free from coal tar. Non-odorless, vermin-proof.

If the old shingle roof on your house or barn is leaky, better get the Roof Book and learn how you can cover the old shingles with No-Tar Roofing at small expense and avoid all roof troubles.

In addition to the free Roof Book the

Heppes Company will send you free samples of NO-TAR ROOFING and tell you ten ways to test it and prove its superiority.

Send postal for FREE ROOF BOOK to the Heppes Company, 2431 Filmore street, Chicago, and get posted on the roofing question.

GOING TO OWN A "BIKE" THIS YEAR?

Renewed interest is being taken in cycling all over the country now that high-grade wheels which formerly sold for \$75 to \$100 can at present be purchased at prices ranging from \$15 to \$30. Not only are the wheels less expensive today but they are even better, for many new improvements have been added, such as puncture-proof, self-healing tires, and the Coaster Brake, which has done more to revive cycling than anything else.

This device enables the rider to coast down hill with the pedals motionless. To slacken speed or stop instantly all that is required is to back pedal. One-third less pedaling is needed and the wheel is under the rider's control at all times.

To obtain a wheel for ten days' free trial and examination without cost write the Mead Cycle Company, Chicago. Their large, illustrated catalogue is sent free and they are always ready to eugage live, active agents.

J. S. Haupt & Co., Easton Pa., the noted Orpington specialist, wants you to send for one of his 1907 circulars, which gives a full description of this large plant, which is devoted to the raising and advancement of Orpingtons. This firm has made a very enviable record in the showroom with their birds, and if you are in search of something to improve your flock you cannot do better than to send for their circular today and mention American Poultry Journal.

Charles E. Vass, Washington, N. J., importer, exporter and breeder of Single and Rose Comb Buff and Single Comb White and Black Orpingtons, has issued a very neat booklet, printed in two colors, which gives prizes, illustrations and other information about his Orpingtons. This booklet should be in the hands of everyone who is interested in Orpingtons. Send for one today and mention American Poultry Journal.

EXPERIMENT.

Gosport, Ind., Feb. 15, 1907.
Willett's Water Glass Egg Preserver Co., Box 56, Anderson, Ind.

Gentlemen: On the 15th day of last June, 1906, I put down five dozen fresh eggs in a stone jar with your Water Glass Egg Preserver just for experimental purposes and put the jar in a cool cellar. I forgot all about the eggs until December 11, when upon that date a party of my friends called for a social evening, and in discussing the poultry and egg business the forgotten jar came into my mind. I went and got the jar and broke nine eggs to test for eating purposes. One of my guests was a merchant who has been buying eggs for years. Upon seeing the nine eggs broken he would have bet his life I had just gathered them from the nest, so fresh looking were they, sweet to the taste, and so readily did they slip out of the shells, not even one sticking to the shell, nor were any of them settled to one side of the shell. We were simply baffled at this phenomenal experiment. Then to make a more definite test of the matter, I took two eggs out of the jar and left them lay in the open air for two weeks. Then I was sure I would have you "up a bush" then, as to the keeping qualities of the eggs, but still, to my amazement, the two eggs were as fine, sweet and fresh as if they had just been brought in from the nest. On New Year's day I finished up the four dozen among some of my friends, and it is with pride that I can truthfully say they were all in fine condition, and I would at that date have defied any expert at "candling" eggs to have proven them anything but fresh laid eggs. Anyone would have been safe in making a strong bet on it.

Will say I intend to "embalm" several hundred dozen this coming summer with your preserver, as I know now that I can have a little home "gold mine" of my own in my cellar during the December and January trade when eggs are soaring around 30 cents per dozen.

Gentlemen, here's to you! Don't be afraid to unfurl your banner of success and fortune to the American people, because you have just what they are looking for. I am only "one" of "this" people, but I speak as one who knows from what source they have gained their testimony.

Yours for your future success, and for future business with me, I beg to remain, Respectfully,

Newton D. Lingle,
Breeder and Exhibitor.

A REAL MINERAL SURFACE ROOFING.

There are many roofings on the market today which will give satisfaction provided they are carefully painted or coated every year or two. This painting, however, is expensive and troublesome, and we are glad to note the coming into the market of a new roofing which requires no paint whatever. This is Amatite roofing.

Amatite has a mineral surface which takes the place of paint and lasts very much longer. Farmers who have any roofing to do should obtain a free sample, which may be done by addressing the Barrett Manufacturing Company, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans, Cincinnati.

Gedney Farm Poultry Yards, Frank W. Gaylor, manager, White Plains, N. Y., have issued a very neat twenty-page mating list which describes the different pens of the various breeds on this extensive farm. It also contains a large number of testimonials from their many satisfied customers. This is one of the most extensive poultry farms in the east, and is ably managed by Mr. Gaylor, who is well and favorably known in the poultry world. Look up their ad elsewhere in this issue and send your order to them. They will treat you right. Mention American Poultry Journal.

Clement & Fike, Libertyville, Ill., report that they have finished hatching for this season; therefore those who order eggs from them this month will get eggs from their best pens. This firm makes a practice of doing all their hatching early and therefore always have mature show birds ready by September 1. This firm and their stock of White Wyandottes is too well known to readers of American Poultry Journal to need further comment here. Send in your order for eggs now and get some of the "Greatest Strain on Earth."

Are prize winners. Won 12 1sts, 4 2ds, 3 3ds and 11 specials at Ill. State Show, Mt. Sterling, Warsaw and Cartage. Eggs from these grand birds at \$2 and \$3 per 15. Some fine ckl. yet for sale.

Paul Coats, R. 1, La Prairie, Illinois

Laying White Wyandottes

Bred for eggs and beauty. Get the strain that will shell out the eggs. Trap Nests used for years and none but heavy layers bred from. Eggs \$2.50 per 15. Incubator eggs \$6 per 100.

WISEACRE'S POULTRY FARM
Box 25, Croton-On-Hudson, N. Y.

Columbian Wyandottes.

Winners of 1st ckl. and 1st pen at New York State Fair, 1906. Winners of ALL firsts at Texas State Fair—none better. Texas is a great state and Woodlawn is a great Farm. For particulars and prices address the manager,

N. C. MATTHEWSON, 103 Austin St., Marshall, Texas

BARRED P. ROCKS

for Exhibition and Utility.

Winners at Illinois State Fair from 1901 to 1906. Stock all sold. Eggs \$3 per 15; \$5 per 30. A sure death to lice recipe to every customer. Over 500 premiums in the past three years.

M. M. SMITH, Farmersville, Ill.

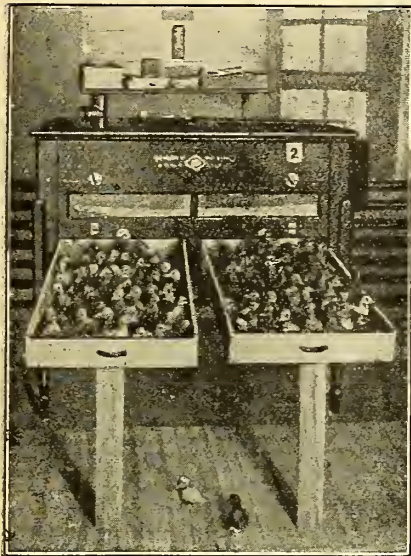

Your Name Will Get \$2 Eggs For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the world. I keep 2000 of the celebrated Chamberlain laying strain on my Experimental Farm, and to increase the sale of my Perfect Chick Feed, I will send to any one who will send me their name so I can send them my Perfect Chick Feed Catalogue, 2 sittings of Single Comb Brown or White Leghorn Eggs for \$1 for the 2 sittings. Only 2 sittings sold to one person. White or Barred Plymouth Rock, or White or Silver Laced Wyandotte Eggs \$1 per sitting. This is a rare chance to get a start extra fine stock. Send money and have your orders booked at once. **W. F. CHAMBERLAIN**, (The Perfect Chick Feed Man), KIRKWOOD, MO.

HATCHED 201 DUCKS FROM 217 EGGS.

In proof of the fact that ducklings as well as chicks can be most satisfactorily hatched in incubators we present to our readers a picture of a hatch just taken off by G. M. D. Legg, of Sterling, Ill. Mr. Legg was so well pleased that he had a photograph made of the hatch of his ducks and then had it printed on postal cards. It forms a good advertisement of his ducks and is a credit to the incubator in which they were hatched—the latest pattern incubator made by the Cyphers Incubator Company, Buffalo, N. Y. The photograph was dim and does not do the hatch justice. The drawers were so full of ducklings that a number fell overboard.

This is hatching with a vengeance. No wonder the Cyphers Incubator Company

201 Ducks out of 217 Eggs.—A splendid hatch made by G. M. D. Legg, of Sterling, Ill., in a Standard Incubator, made by Cyphers Incubator Co., Buffalo, N. Y.

catalogue contains illustrations of the many farms where their incubators and brooders are used. We can understand now how the plants illustrated in that book are able to produce the great number of chicks and ducklings the proprietors tell about—one of them actually has a capacity of 100,000 ducks yearly.

The poultry industry has come to be a leader, and most of its prosperity can be traced to the splendid hatches that are made in well-constructed incubators such as the "Cyphers."

None the less successful are the brooders made by the Cyphers Company. On April 13 George C. Wontall, of Toms River, N. Y. (who has just bought one of their new style self-regulating brooders) wrote that "for the past ten days with thermometer ranging from 30 to 60 degrees outside I have been testing one of your self-regulating outdoor brooders with sixty chicks, and it showed a variation under the hover of only three degrees. I have the lamp flame very low and have all the heat I want and burn less oil than I do in other brooders that have not half as much floor space."

It is to the interest of our readers to get one of the big 260-page catalogues of the Cyphers Incubator Company, which, in addition to illustrating and describing the many poultry supplies they manufacture, contains color-plates of their latest pattern incubators and half-tones of their 1907 brooders. It also has pictures of the world's biggest poultry farms; six valuable chapters on poultry raising, etc., etc. It will be sent free to any of our readers who in writing names this paper. Address Cyphers Incubator Company, Buffalo, N. Y., or either of their branch offices in the following cities: New York, Boston, Chicago, Kansas City, Mo., or Oakland, Cal.

One of the most attractive poultry food catalogues we have received is "Poultry Foods That Make \$8 & \$8." just issued by the City Milling Company, Box 72, Quincy, Ill. Typographically it is an excellent work, the cover representing a natural scene in two

colors on a straw-colored stock. The catalogue is replete with interesting matter and illustrations concerning the famous National H-P (High-Protein) Poultry Foods. These foods are sold direct from the mill to the feeder. By dealing direct with poultry feeders, and not having to consider the proportionate cost of an expensive agency system, the City Milling Company state positively that their poultry foods and appliances represent to the buyer much greater value for their cost than any similar foods or appliances on the market. The guarantee is most liberal—absolute satisfaction or return the foods at the company's expense and obtain your money in full.

Write today for the catalogue and ask for samples of the H-P Growing Scratch and H-P Growing Mash.

George W. Tracey, Kinderhook, N. Y., wants to send you his circular and mating list, which tells about his Rose and Single Comb Rhode Island Reds. Write for it and mention American Poultry Journal.

Have you received the 1907 circular of Victor D. Caneday, Taylors Falls, Minn.? Mr. Caneday breeds pedigreed White Plymouth Rocks.

W. H. Gifford & Son, 151 Franklin street, Auburn, N. Y., the Black and White Orpington breeders, have mated up some exceptionally fine birds this season and are selling eggs at very reasonable prices, considering the quality of their stock. If you want something good write them today for circular and price list and mention American Poultry Journal.

Wopsy Poultry Yards, J. W. Parks, proprietor, Altoona, Pa., has issued a new 1907 catalogue which gives illustrations, prices, etc., of his "Bred-to-Lay" Barred Plymouth Rocks. A copy of this catalogue will be mailed to you if you will mention American Poultry Journal. Send for it today. It will interest you.

East Side Poultry Yards, La Grange, Ind., was destroyed by fire on April 6, loss amounting to about \$1,900. These yards had devoted a number of years to the development of Single Comb Buff Leghorns, and it is with regret that we chronicle the above.

Lt. Brahmas @ Partridge Cochins

Unsurpassed in color, shape, size and laying qualities. Eggs \$1.50, \$2.50 and \$3.50 per 15. Liberal discount on quantities.

LOCUST LAWN POULTRY FARM

This New Farm Described by Mr. Fred L. Kimmey, who Visited there a Few Weeks ago at Our Request.

It is 11 o'clock p. m. As the last of the household to retire to rest ascends the stairs an alarm at the telephone arrests her steps. "Hello 252! You are wanted by long distance!" "Yes!" "Hello! Is this Morgan Park 252?" "Yes!" "I want to talk with Mr. Kimmey—is he home?" "Yes; but in bed and asleep. I don't know if he will get up." "Well, tell him Mr. Frith—George Frith, of Aurora—wants to talk with him on important business." "Hold the wire, then." "Hello, Frith! What do you want?" "Is that you, Kimmey?" "Yes!" "Well, we want an article describing our egg farm in The American Poultry Journal, and we

answered, "if it is a favor to you or your business I will gladly do it; but I don't 'hanker after' the job. The disagreeable feature of all these visits and descriptions is the amount of favorable exaggeration you are expected to give the public. I'm not a bit like George Washington. He couldn't lie—I can. But I don't like to." Mr. Bates replied: "Mr. Kimmey, if you go out, describe things just as you see them. If you find anything good, tell it; if anything bad, you are at liberty to not hold it back." "Very well," I concluded; "arrange it as suits you best."

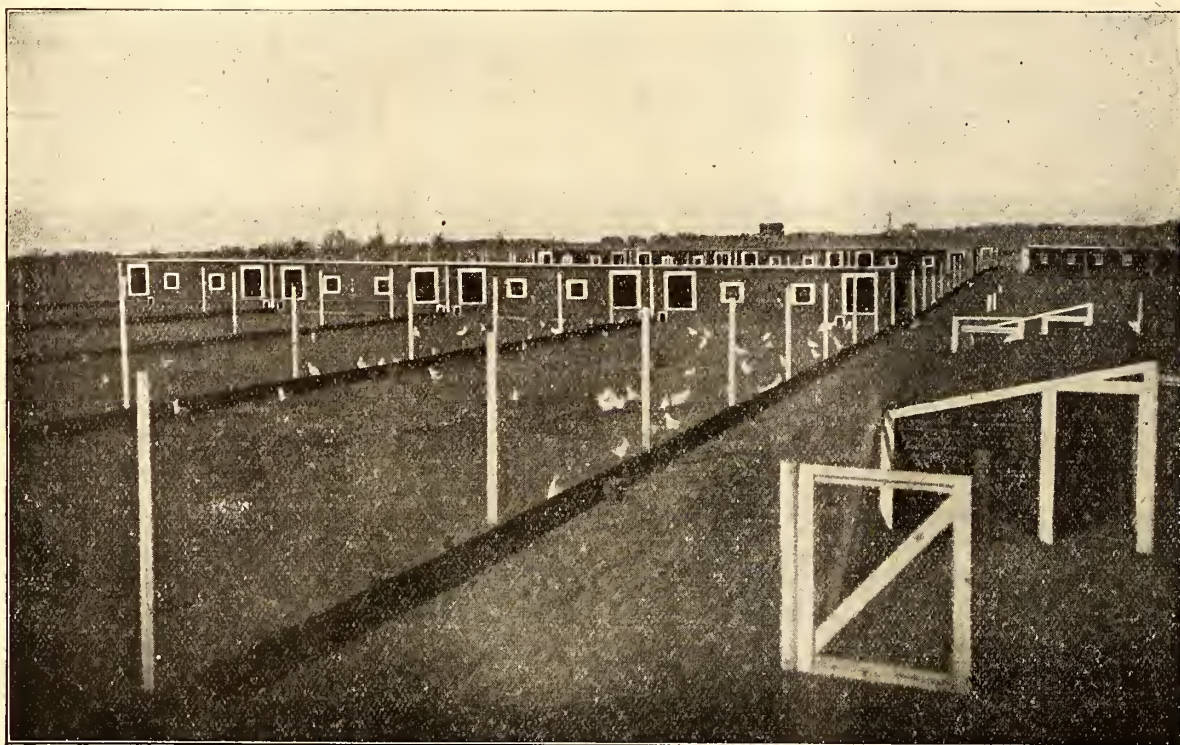

About a week after Mr. Bell, the genial associate editor, said: "Mr. Kimmey, it has been arranged that you visit Locust Lawn Farm. When can you go?" "Tomorrow morning," I answered. "Tell them to meet me at the 9:17 train."

It was beautiful; more like a rare June day than a warm March morning. As we rode along I asked Mr. Frith,

them—and the lawn in the front-door yard.

We looked over the sixty acres of land, examined the many incubator, brooder and poultry houses, barns and feed houses, equipped with the best and latest appliances, gasoline engine, mill, boiler; admired the flocks, and then after an exquisite dinner—not lunch—served by Mrs. Frith, drove to the office of the Wilcox Manufacturing Company for a talk with Mr. D. W. Simpson, the proprietor of the farm, then back again to the depot for the 5 o'clock p. m. train, with a free hand to write for The American Poultry Journal my impressions of the Locust Lawn Farm.

The Locust Lawn Farm has weakness and strength. Its make-up is in its name, "Locust Lawn." With equal propriety it might have been named "Raspberry Heights," "Strawberry Ridge," "Pear Grove," "Alfalfa Plains" or any one of the many pretentious titles with which poultry places.

SCENE ON LOCUST LAWN POULTRY FARM, AURORA, ILL.

want you to come out and write us up." "Is that all? I'll not do it!" "Why not?" "Because I have not now and never had any interest in The American Poultry Journal—am not even an occasional correspondent. Don't like the work of making exaggerated 'write-ups' for poultry enterprises." "Oh, well, you'll do this for me, won't you?" "No, I won't! I may be induced to do it if the request comes from the editor, Mr. Bates. I rent desk room in one corner of one of The American Poultry Journal offices and have always been treated so nicely by all there that there is nothing I would not do for them at their request. Good-bye!"

Several days later at the Chicago office Mr. Bates said: "Mr. Kimmey, George Frith is very anxious that you should visit Locust Lawn Farm and give your impressions of it to the readers of The American Poultry Journal. What do you say?" "Mr. Bates," I

"How far do we have to go?" He answered, "Only two and a half miles right out on the New York road." It was a good stone road. After a while a church spire and a small cluster of houses came in view. "Is that New York?" I asked. With a hurt look of amazement came back the answer, "Why no, man! Don't you know New York is a thousand miles from here?" Of course I knew it. But he had called it the New York road. He explained that they called it the New York road because the automobilists could go on that road to Chicago and thence to New York. We turned in at a pretty, home-like looking place. The many poultry houses grouped in the background made it unnecessary to ask the question, "Is this the place?" "But why do you call it Locust Lawn Farm?" I asked. "Why, don't you see those locust trees," answered Frith, "and the lawn?" Yes, I saw the trees—three of

all through our land are belittled.

It has strength in its really advantageous location—in the central part of the beautiful rolling prairies of northern Illinois, the garden state of the best country on earth; and then, too, consider it is the choicest spot to be selected above all others as far as the eye can reach. It is land just right for any crop suitable to the climatic conditions. To have converted it into an egg farm shows real love for the business. It is not a "summer boarder and fancy poultry" combination, forced because none other could succeed. It is land worth \$200 an acre as market values go today. In the enthusiastic words of the owner, "It is God's own country."

It has strength in the man, D. W. Simpson, who is planning and pushing the enterprise. Mr. Simpson is president and treasurer of the Wilcox Manufacturing Company, well known in the hardware world. Hung up in a con-

spicuous place in his office I noticed these mottoes: "All things come to him who hustles while he waits;" "Folks who do only what they have to, get paid only for what they do." Mr. Simpson smilingly complains that his life is full of crosses. "When he was little the big girls kissed him; now that he is grown the little girls kiss him." "Our trip from the cradle to the grave is over a road that is rocky; but man doesn't mind that when he can buy fresh eggs from the Locust Lawn Farm."

But the greatest element of strength is in the plans and purposes practically and wisely thought out at the inception of the enterprise.

Locust Lawn Farm is and always will be run for the production and sale of eggs.

There are eggs, old eggs, new eggs, fresh eggs, strictly fresh eggs and newly laid eggs. If not in the business one can hardly comprehend the classification. If you are the farmer, who gathers them at the close of the day after those laid first have been in the nest under the late layers a couple of hours at a temperature of 99 to 101 degrees, then all kept together for a week before taking to the town grocer for sale, you just begin to have an idea of the difference between a fresh egg and a strictly fresh egg. The commission man knows something about it; but one must be a cold-storage man or a city grocer with a candling experience to know it all. After all, the consumer is not so badly treated, for if he is willing to pay the price he can purchase the best grades, averaging not more than ten days from the hen, guaranteed—guaranteed! An egg of fowl is

the "par excellence" of human foods. It is the most nutritious, the most healthful and the most palatable. What can more delight the eye than the delicate white and the rich golden? What can more please the palate of the epicure than its delicate flavor? This is of the egg in its prime excellence. Otherwise it is a much different proposition. Guaranteed! Yes; but if one in a case of thirty dozens has reached the age so that one is odorous and has to be replaced under the guarantee, then what? I know a lady who was unusually fond of poached egg on toast. One unlucky day a musty—not a rotten—one was served to her. She has not eaten one since and emphatically declares she never will.

Eggs to be the best or even good must be something more than "just laid." For our purpose a hen is a machine for producing eggs. To do the right work the machine must be in right shape; it must be healthy. You cannot get out of a machine only what you put into it. If you feed it cotton it is foolish to expect silk.

There was a time when distillery swill-fed cows produced milk, which was distributed without let or hindrance in most of our large cities. Then came complaint, next prohibitive ordinances, then milk standards, and inspectors equipped with the power of law. Is there any reason why swill-fed milk is a whit better than swill-fed eggs?

At the Locust Lawn Farm they have healthy stock. They feed only the choicest grains and vegetables. I looked in vain for the familiar sacks of bone and blood meal and dried beef scraps

fresh from the fertilizing establishments. And the stock! White Leghorns, looking as if from the laundry; Brown Leghorns by the hundreds, as fresh and bright as a flock of robins just from the Sunny South. "How many breeds do you propose keeping?" I asked Frith. "Just the Rose-comb Brown and the Single-comb Whites," was the answer. "And how many?" said I. "Well, when our yards are full, nine thousand," he replied.

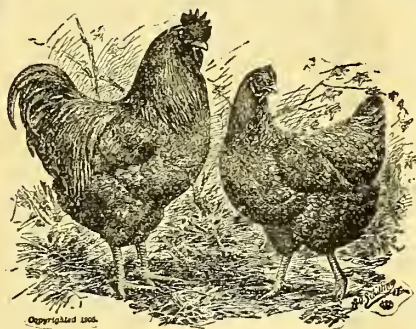

The purpose and aim of the Locust Lawn Farm is to furnish healthy eggs, scientifically produced from the best material, to the consumer. None but the best thoroughbred stock of the two Leghorn varieties are kept. Attention will be paid to breeding stock along the lines of utility and standard requirements. It is believed that there is no disadvantage in having stock that will produce the most eggs and by birds that will take prizes at a poultry show. A constant improvement is easily possible. As is well known, all breeders seek advancement through the two seemingly contradictory principles—like produces like.

In all nature there are no two things alike. In the most similar things there is a constant variation.

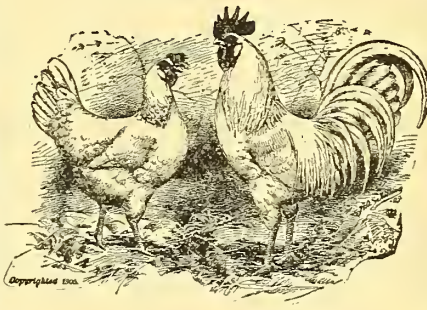

With thousands of birds to choose from, what cannot be done in the way of selection for breeding purposes? And again, what a chance for selection from the thousands of their progeny. With the application of proper skill I predict a great success for the Locust Lawn Farm. I wish they would change its name.

Fred L. Kimmey.

EGG BARGAINS PRICES CUT IN HALF

Do not miss this rare opportunity to secure eggs from standard bred birds at astonishingly low prices. To advertise our stock we are offering, for a limited time only, settings of eggs from the following varieties at exactly one-half the regular price. Light Brahas, Partridge Cochins, Buff Cochins, Silver Wyandottes, W. Wyandottes, R. I. Reds, Black Javas, Silver Spangled Hamburgs, White P. Rocks, Barred P. Rocks, Pea Comb Barred P. Rocks, S. C. W. Leghorns, S. C. B. Leghorns, Buff Leghorns, B. Minorcas.

This is an exceptional opportunity for you to test the superiority of our strains at a very small cost.

We Will Put Our Birds in Competition

With any in the country, and the eggs we are offering at bargain prices are from stock of fine quality. Don't take our word for it. Here is what some of our customers say:

"Birds arrived yesterday and they are beauties. Thanks.
Thos. A. Wade, Architect, Toledo, Ohio."

"Bird received in good shape. He is a dandy. I am more than pleased.
W. A. Schulke, Bay Port, Mich."

"Stock arrived in fine condition. Accept my thanks for prompt attention. You need not be surprised if some of my people follow my example and order fowls and eggs from you. Rev. A. F. Hersfeldt, Eagle River, Wis."

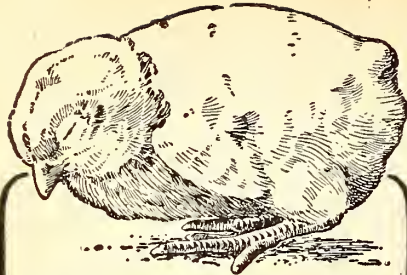

"The turkeys received in first-class condition. Am well pleased.
C. C. Modessa, Manheim, Pa."

We guarantee every egg to be fertile and we pack them for shipment so carefully that they may be safely carried to any country on the globe. Write immediately for price list or send 10 cents for our book, "Poultry for Pleasure and Profit," and then send us just one-half the price listed for eggs from the varieties mentioned in this advertisement. Cash must accompany all orders. Send money by draft, P. O. or express money order or registered letter. Ask for our prices for birds. We sell single specimens, pairs, trios, pens or any number required. Also turkeys, geese, ducks and guinea fowls. Write at once while this offer lasts.

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: Please answer in your questions and answers column the following questions: (1) The best remedy for scaly leg. (2) What is the best remedy for bowel trouble in hens? I have some very nice White Wyandotte hens that have the trouble the year round; the eggs are not fertile and I think that the cause. (3) Does it help eggs to hatch in an incubator if you sprinkle them with warm water about the nineteenth day? (4) What is the best feed for hens to grow feathers after the moult? (5) Are the R. I. Reds supposed to be non-sitters and do they breed true to feathers? Most all I have seen have some white feathers.

Scotland Neck, N. C. H. W. M.

Answer.—(1) Scaly leg is a contagious disease and when first observed in a flock prompt and energetic measures should be adopted to eradicate it. The affected birds should be isolated to prevent the spread of the contagion. The houses which they have occupied should be thoroughly cleaned. The roost and other woodwork should be scalded with boiling water or covered with carbolated lime wash. The treatment should be as follows: The legs should be soaked for a sufficient time in warm water to which soap has been added. When thoroughly softened the loose scales may be removed without causing bleeding. Or, a coat of soft soap may be applied to the affected parts, leaving it to act for from twelve to twenty-four hours. The legs are then placed in warm water and the scales softened and removed by gentle rubbing. After this has been done the legs are dried and treated with a good coat of carbolic ointment (1 to 10) or balsam of Peru. The latter may be applied daily for three or four days. (2) This is an unusual condition and must be due to your system of feeding. Give plenty of boiled milk to drink, to which add a liberal quantity of powdered cinnamon. (3) We have never tried it, therefore cannot tell from experience. Some writers claim it is a good thing, and others say it is not. (4) Buckwheat, sunflower seeds and good whole wheat. (5) The R. I. Reds do not belong in the non-sitting class. As they are a comparatively new breed they do not breed as true to feather as some of the older varieties.

Editor American Poultry Journal.

Dear Sir: Please answer the following: My W. Leghorns lay very thin shelled eggs. Is this characteristic of this breed? What will make them thicker?

B. F. R.

Tampa, Fla.

Answer.—This is not characteristic of this breed, and is due to a lack of shell forming material. Feed plenty of wheat bran, cut bone, broken mortar, crushed oyster shells, etc.

Editor American Poultry Journal.

Dear Sir: I set a hen last year and had good luck; all the eggs were good. This year I have the same chickens and rooster and the eggs were all rotten. How is this?

J. H. S.

Covington, Ky.

Answer.—This is probably due to your male bird having lost his vitality. You should procure a new male bird to impart vitality and vigor to your stock.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your next issue: Since February I have set ten Barred Plymouth Rock hens, each with twelve eggs. Eight of them have hatched (two of them not due yet). Four eggs out of the twelve, the balance of the eggs, the shells were cracked open but the whites of the eggs were hard as leather and the chicks appeared to be fully developed, but dead. What could be the matter? They have the same amount and quality of food as last year and also have the same poultry house as when all the settings were successful.

E. H.

Allegheny, Pa.

Answer.—This is due to a lack of moisture. Sprinkle the eggs with warm water about the seventeenth day.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following question: A short time ago the comb of one of my cockerels began to bleed. I thought at first it was hurt, but it continued to bleed several days; then he died. Otherwise he seemed well and healthy. Now a pullet is affected in the same manner. What is the trouble and what would you suggest for a remedy?

C. W. L.

Michigan City, Ind.

Answer.—This is due to an overabundance of blood and lack of proper exercise. Bleeding in the roof of the mouth usually relieves this condition.

Editor American Poultry Journal.

Dear Sir: I have a 120-egg incubator. Set it in an upstairs room in March (eggs from healthy stock). Got twenty-five chicks, every one doing fine. Set it again in same place, eggs from same stock; got fifty-five chicks. In the first set I did not use any moisture according to directions with machine. In the second I used moisture the last two weeks. In both sets I had a number of crooked leg chicks; some would have one good leg, in others both legs would stick straight out from body. They could not get their feet under them out seemed strong, ate well, but did not get any better in three days, when I put the little things to rest. Also, quite a number died in the shell, while pipping; some would be almost ready to kick out and then give it up. On breaking the eggs I found a great many that were completely formed had died in the effort to break the shell. The hatch was completed by the morning of the twenty-first day. Temperature did not go above 105 and only once that high. Can you tell me the cause and remedy?

P. E. H.

Plain City, O.

Answer.—This is the same complaint we hear every year and from every section of the country. This is due to various causes. One of the principal causes is the parent stock. Most every breeder will force his hens to lay during winter and the result is that the vitality of the

stock becomes weakened and when the hatching period arrives the breeder is disappointed because the chicks have not got enough strength to get out of the shell, and very frequently will blame the incubator, when in reality it is his own fault. As the season advances and the weather gets warm and the old stock

Editor American Poultry Journal.

Dear Sir: Will you please answer the following through your paper: (1) How many Buff Cochins Bantams can be kept in a house 7x12 and how large should the run be? (2) Do you know of any poultry paper especially devoted to Bantams? (3) My hens lay such soft shelled

Editor American Poultry Journal.

Dear Sir: As I am a reader of your valuable journal, and a beginner in the poultry business, I want to ask some questions. First. One morning when I went out to feed my poultry, I found one of my turkey hens sick. I caught her and when I let her head hang

Breeding yard of White Plymouth Rocks mated to produce "Winners and Layers." These hens have a trap nest record of an average of 162 eggs each per year. All but two score above 92 (without conditioning): Judge Heimlich. If this isn't a combination of fancy and utility, what is it? Bred and owned by J. A. Bickerdike, Millersville, Ill.

gets more vigorous the percentage of chicks that die in the shell becomes very much smaller, which goes to prove that it is the fault of the breeding stock. The only remedy is to have your breeding stock in a hardy, vigorous condition before the breeding season and keep them so at all times.

eggs that they break the minute the hen gets on them to set. They have had grit and ground bone all the time.

Calais, Maine.

L. W. E.

Answer.—(1) Ten to fifteen. The run should be as large as your space will permit, but not less than 12x25. (2) No. (3) Read answer to B. F. R. in this issue.

down water ran out of her mouth. I used a cholera cure and some mustang liniment; her dropping looked whitish. I fed her nothing but wheat in the evening, which she got when I fed the chickens; after a few days she died; I cut her open and found nothing but water in her gizzard and some

bran, which I used to make up the cholera cure. I found some dry food in her stomach and also some gravel. She was a very fat bird and her stomach was covered all over with fat. Please state cure. Second. Would you advise one to pen up his turkeys before the breeding season so they get poor? Third. Is there any way or remedy for reducing the fat of the

Yes; but it is not necessary to starve them. Feed less corn. 3d. You can easily regulate their diet so that they will not get too fat. 4th. Not over 25.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following questions in your columns soon: For a month or two I have been greatly troubled with thin

coal and old plaster are given every day. They seem greedy for this. Green stuff in form of beets, turnips, some clover hay, is given. Pure water. Can you tell me what they lack, so I can avoid this trouble another year? Also if the leg weakness is caused by this lack. In feeding grain to growing chickens will you tell me what proportionous to use of the following:

Laying House No. 2, 14x104 feet, on Glendale Poultry and Squab Farm, Old Orchard, Mo.

birds except putting them on a starvation ration or penning them up in some way? Fourth. How many Rhode Island Reds would you advise me to keep in a house 20 ft. by 12 ft. T. N. L. Dale, Ind.

Answer. — 1st. This trouble was brought on by too heavy feeding of fat producing foods. The only remedy is change of diet and less food. 2d.

shelled eggs, which are crushed in the nests and the hens have learned to eat them. About the same time, I should say, the hens began being "off their feet," as we call it. The hens are R. I. Reds and P. Rocks; are fed the same as the Maine Experiment Station hens are fed, the best of wheat, oats, corn and dry mash. Grit, oyster shells, cut or granulated bone, char-

Wheat, oats, corn. How early is it best to begin feeding beef scraps, and how much? M. A. G.

Barre, Vt.

Answer.—Egg-eating is one of the worst habits that fowls can acquire, and it is almost impossible to break them of it. This habit is generally acquired during the winter or early spring, and is due to close confinement

MAKE YOUR OWN CUT GREEN BONE

It's a very easy, simple operation with a **CROWN Bone Cutter**. Green bone makes eggs, and stimulates the hen's productive organs. Cut bone fresh every day. The Crown does it quickly with no bother or muss. 25 years building cutters. Write for free catalog. **WILSON BROS., Box 600, EASTON, PA.**

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50.

The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains.

If the Brooder is ordered with the Incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the Incubator delivered west of the Rockies is \$9.90 and the Incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if notes represented.

If you want a larger machine write for our 80-page "Victor Book"

and lack of something else to do. Where fowls are kept busy continuously this habit is unknown. All nests should be placed as much in the dark as possible and plenty of china nest eggs supplied. Leg weakness in mature stock is also due to lack of exercise. This exercise can be supplied by scattering all the feed in deep litter and make the fowls scratch for all the feed they get. Three parts wheat to one part each of oats and corn is about the right proportion. Beef scraps can be fed the year round; two ounces to each fowl three times a week.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue these questions: (1) What per cent of barley and Kaffir corn should be given little chicks? (2) What color should a full blood White Leghorn little chick be when hatched? Mine are some a greenish shade of white, some yellowish shade, some almost pure white. Which are considered the best color, or does it matter? S.

Answer.—(1) Ten per cent Kaffir corn. Would not advocate barley for little chicks. (2) They should be white or smoky white, the latter preferred.

Editor American Poultry Journal.

Dear Sir: What are the conditions that make Iowa stand at the head of the list in poultry and egg production? The following is the report of agricultural statistician for 1905: Value of poultry and eggs—Iowa, \$31,000,000; Illinois, \$29,000,000; Ohio, \$20,000,000; Missouri, \$27,000,000; Pennsylvania, \$23,000,000; Indiana, \$22,656,277. Strange that the big states of Illinois and Indiana should be surpassed by the little state of Iowa. La Fayette, Ind. J. M. S.

Answer.—We doubt very much if the above figures represent anywhere near the actual value of poultry in any of the states named.

Editor American Poultry Journal.

Dear Sir: I wish you would answer the following question for me in the next issue of American Poultry Journal: At

Which Do You Prefer?

Nothing saps a fowl's vitality more quickly than vermin; nothing will so certainly eliminate your chicken profits as lice and mites. Your hens will stop laying—chicks stop growing—nothing will thrive in the presence of vermin. It is not a question of raising both chicks and vermin, but rather a question of which you prefer—chicks or vermin.

Lice, mites, ticks, fleas, etc., everywhere abound—some more than others in certain localities—but some or all of them everywhere. Numerous insect destroyers are offered for their extermination. Some are effective in certain localities where others are worthless and vice versa, but

LEE'S LICE KILLER

is effective everywhere and on all kinds of vermin. Easy to use and results are always satisfactory. You just paint or spray the roosts and walls of the poultry-house. That's all! No handling, dusting, dipping, or greasing. None of the annoyance and bother so necessary with other preparations.

I have used your Lice Killer for some time and I would not give one quart of it for all of the other so called Lice Killers on the market. C. M. ANDRAE, Portales, New Mexico

Price 35c, 60c, \$1.00.

BIG MONEY IN POULTRY.

Our big Poultry Book with many new illustrations tells how to make it; also how to feed, breed, grow and market Poultry for best results. Plans for houses and a great mass of useful information. Tells how to start small and grow big. Illustrates and describes the largest pure bred Poultry Farm in the world; tells about our many varieties; quotes lowest prices on Fowls, Eggs, Incubators and Brooders. Mailed for 4c postage. **FRANK FOY, BOX T.B., DES MOINES, IOWA**

PAGE Poultry Fence

Strongest, best on the market. Fences poultry in, stock out, and lasts. Costs less erected than common netting, because it requires no boards at top or bottom and no few posts—one every 50 feet. You can't afford to buy poultry fence without investigating Page. Write for descriptions. Page Woven Wire Fence Co., Box 586, Adrian, Mich.

Save the Chicks

Don't let your chicks die from Bowel Complaint. Don't let Cholera and other diseases cut down the productiveness of your fowls during the present season. More chicks die from Bowel Complaint than from all other diseases combined, and yet it is the easiest of all poultry diseases to prevent or cure.

Germozone Cures

Bowel Complaint, Cholera, Chicken Pox, Canker, Roup, and other poultry diseases. It is a germicide—a bowel regulator. Most poultry diseases originate from Colds or from some internal disorder, which, if taken in time, can be quickly cured, but if neglected quite frequently results in loss of the entire flock.

Germozone goes immediately to the seat of the trouble, and, unless the disease is in its last stages, will invariably effect a speedy cure. You ought to use it now. A teaspoonful in the drink will prevent disease and keep your fowls healthy.

I have used Germozone for more than two years and do not believe I could keep my poultry healthy without it.

JOSEPHINE FLOY,

and removed the egg but the skin is still on the outside. It probably was her first egg, but have you any idea what caused it? Does this happen very often? Should the hen be killed? If so, would she be fit to eat? I am quite sure she has laid since.

Pittsfield, Mass.

Answer.—This is caused by the fowl straining in her efforts to expel the egg. By holding the lower part of the hen in a vessel of warm water for fifteen or twenty minutes will usually cause the deranged parts to assume their natural position. This is not a very frequent occurrence and unless the bird is a valuable one it is better to kill and eat her.

Editor American Poultry Journal.

Dear Sir: Would be pleased to have you tell me in your next issue how to tell a thoroughbred Buff Orpington and what should the color of the egg be? Also, what is a good ration for about a dozen?

Hayes, S. D.

Answer:—Procure a copy of the American Standard of Perfection, price of which is \$1.50. This will teach you what a Buff Orpington should be like. The best feed is wheat, corn, oats and barley.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following questions in the next issue of the Journal: When my chicks hatched they were lively and could walk all right. Now they are about three weeks old and can hardly walk. They have been fed on Cypher's Chick Food and have had good water. They have also had good, clean quarters in brooders. They act as though their legs were sticks of wood and they sprawl all over when they try to walk. They are bright and lively otherwise and eat well. What is the cause? Can you give me a remedy?

Barrington, Ill.

Answer.—Leg-weakness, due to too much bottom heat in your brooder or to lack of exercise. Give your little chicks plenty of cut clover hay to scratch in and scatter all their feed in this.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next month's issue: (1) How should sulphur be fed to sick

AMERICAN POULTRY JOURNAL'S REMARKABLE SUBSCRIPTION OFFER

If your subscription has expired renew at once so as not to miss the next issue, or, if you are not now a subscriber, we want you for one and make you the following splendid offers: For 50 cents we give you one year's subscription to AMERICAN POULTRY JOURNAL. Or if you secure four subscribers (including your own), we will make you the cut price of 35 cents each.

A subscription to AMERICAN POULTRY JOURNAL this year will mean more than ever before. This year we shall do something no other poultry paper has ever undertaken. Every recognized variety of poultry, ducks, geese and turkeys raised in the United States will appear in AMERICAN POULTRY JOURNAL in colors, nearly 300 specimens. Think for a moment of having so valuable a collection of pictures; it is worth many dollars to every subscriber. We call your attention to our beautiful colored covers.

Sometimes a subscriber who has already renewed may receive this blank. That does not mean that the renewal has not been received. We begin to pack in mail bags a week or more before mailing, and the renewal may have reached us after the copy containing the blank has been packed. Remit by money order or stamps (1c stamps preferred). Send at once in order to get all the colored pictures.

fowls and in what quantity? (2) Can you give me a description of an egg at the different stages of development during incubation? (3) Will thunder kill chicks in egg and at what stage? (4) How can I receive the four colored pictures in your subscription offer, as I have already renewed my subscription? (5) I have a flock of W. Plymouth Rocks and one after the other gets the cholera. How can I prevent this? O. A. S.

Put-in-Bay, O.

Answer.—(1) Sulphur can be fed in the soft or mixed with a little lard and poured down the throat. A teaspoonful to a fowl three times a week. (2) This would take too much room in this department. You will find this in several

books now on the market. (3) No. (4) By sending 25c. (5) We don't believe it is cholera; not at this season of the year. Something is wrong with your system of feeding and caring for your fowls.

Editor American Poultry Journal.

Dear Sir: I wish you would answer the following questions in your journal (which I think is the best, as I take four or five of them): I have 38 hens (30 pullets and 8 old hens) which laid 1,531 eggs from December 1, 1906, to March 29, 1907. Do you consider that a good yield? 2d. I have a pullet with a swelling on the side of her head; she does not cough, sneeze or gap. Feeds

and lays just as though nothing were the matter with her. The eye is nearly swollen shut. What do you think is the matter with her? 3d. How can I bring on or force molting?

Elkader, Ia. B. F. F.

Answer.—1st. This we consider a very fair yield, considering the time of year. 2d. This is form of roup, and the fowl should not be used for breeding purpose, neither should the eggs be used for eating. This bird should be killed and the body either buried or burned. 3d. To force molting the fowls should be put on a starvation diet for about two or three weeks and then fed all they will eat for a few weeks. This will usually cause the old

WORLD'S RECORD — WIN FOR EIGHTEEN YEARS

Bradley Brothers' BARRED PLYMOUTH ROCKS.

At MADISON SQUARE GARDEN, NEW YORK, the last 18 Years

"WORLD'S CHAMPION OF 1906." First Prize and Sweepstakes Cockerel at New York Show, 1906, nearly 500 Barred Plymouth Rocks competing.

Stock For Sale New York Winners and Birds Bred From Winners. Our Breeders For Sale after May 20th. Large Illustrated Circular and Particulars of \$1,000.00 Chick Hatched from Our Eggs, Free

(From Poultry Yards of W. K. Vanderbilt, Jr.)
Bradley Bros.,

Gentlemen:—I want to tell you how well pleased we are with the stock from eggs you sent us last spring. From the 20 eggs I raised seven cockerels and seven pullets, and every one of them is a good bird. Three of the cockerels are extra good; I have been offered \$25 for one of them.

We bought 16 settings of eggs from four of the largest Barred Rock breeders, but didn't get one bird out of the whole lot as good as several we have from your eggs. Very truly yours,
1907 A. E. Wright, Mgr. Deepdale Poultry Farm, Gt. Neck, L.I. N.Y.

feathers to drop out and new ones to take their place very rapidly.

Editor American Poultry Journal.

Dear Sir: (1) Will you please inform me concerning the disease that caused my hen to die? She drooped around for three or four days; her crop was stuffed full. (2) About March 2, 1907, my Plymouth Rock hen hatched four chicks out of ten eggs. The rest of the chicks got half way out and died. What was the cause?

Blue Island, Ill.

L. O.

Answer.—Crop bound and your hen starved to death. This is caused by the fowl eating something that will not pass from the crop into the gizzard, and unless this obstruction is removed the fowl slowly starves to death. (2) Read answer to R. E. H. in this issue.

Editor American Poultry Journal.

Dear Sir: Will you please answer a few questions in your next issue? (1) I would like to know what kind of cottonseed meal to give my chickens, as there are two kinds, one is oily and the other not so much. Is alfalfa meal good to give to chickens and about how much of each of these to feed to a flock of sixteen chickens at a meal? (2) Read answer to R. E. H. in this issue.

St. Louis, Mo.

Answer.—What is known as "Old Process" Linseed Meal is the best. Alfalfa meal is good for chickens. A couple of handfuls to sixteen fowls about three times a week is sufficient.

American Poultry Journal.

Gentlemen: Will you please tell me in your next issue of the Journal what is the matter with my rooster's foot? One toe began to swell near the end and has continued swelling until his whole foot and leg are swollen. I have given it hot salt water baths and used liniment on it, but to no effect as yet.

Zanesville, Ohio.

M. K.

Answer.—This is a form of tuberculosis and cannot be cured. The bird should be killed, as he is not fit for breeding purposes. The body should be burned to prevent spread of the disease.

Editor American Poultry Journal.

Dear Sir: Please answer inclosed questions in May American Poultry Journal. (1) Can a cock inherit scaly leg? (2) Is it contagious? (3) I have a two-year-old White Plymouth Rock hen that lays a large, rough white egg, that laid a smooth brown egg last year. What is the cause of the changing of color? (4) Is there any way to induce hens to set?

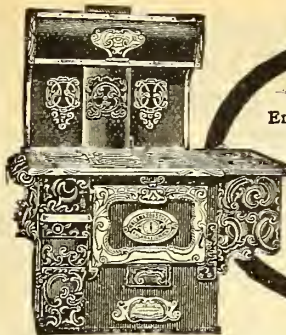

Piqua, Ohio.

P. L.

Answer.—(1) Yes. (2) Yes. (3) This is probably due to feeding. (4) No.

Editor American Poultry Journal.

Dear Sir: I am a subscriber to your valued journal, and will appreciate if in your next issue you will kindly tell me what ails my Minorca cockerel. He is an exceptionally fine bird, and in perfect health on arrival here from Long Island last week. Continued well for several days. One morning this week I found him on the roost with his bill resting on the dropping board; examined him and found a mucus discharged from his mouth. I removed him to the barn. He has continued in this condition. At intervals he will raise his head, walk off, apparently all right, when again he will lapse into this peculiar condition. The discharge

GOLD FOR YOU

Bufs that are Golden Buff

GOLD FOR YOU

**S. C. BUFF ORPINGTONS, BUFF P. ROCKS
BUFF WYANDOTTES & S. C. B. LEGHORNS**

Our Bufs proved themselves the largest winners at the greatest shows in competition with the best in the world. Our Bufs started again at the Austin Show, Jan. 1, 1907; 75 of them went and won 70 prizes and special for highest scoring birds in the show. At the great Minn. State Poultry Show, Jan. 16, 1907, one of the largest and most successful shows in America, 44 of our Bufs went and won 42 prizes; 12 firsts, sweepstakes, best display, silver cup and seven specials.

Again at the great St. Paul Show, Jan. 23d, 1907, 64 of our Bufs went and won 52 prizes; 15 firsts, sweepstakes, best display, 10 specials and the \$25 cash special for highest scoring birds in show; 160 prizes in 30 days. Compare it with others. Our record on Bufs stands alone and unequalled; a record never before approached by any exhibitor in the history of the show. Our unbeaten winners are properly mated for best results to produce winners. We sell you eggs from best pens at \$2 and \$3 per 15. We offer you three fourths of our magnificent breeders at half price after May 20th. Our pullets begin laying when four months and 20 days old, and keep at it. We want you to send for our illustrated catalogue; it tells the story. Yours for a square deal.

is not continuous, but only at intervals, when his mouth becomes perfectly clean. He will not eat. I have been forcing Farmers' Poultry Food and water, for he will not drink. Has diarrhoea. 2d. I have a poultry house 25x12. Hallway taking off 4 feet. Will this be large enough to divide into three pens? I wish to keep three flocks, one of Barred Plymouth Rocks, two of Black Minorcas of different strains. My lot is 80x144. How many fowls in each pen can I keep?

Huntsville, Ala. Mrs. C. E. H.

Answer.—From your description we are unable to say what ails your male bird. 2d. Your house can be divided into three pens and will accommodate 10 birds to each pen.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following: 1. I get an average of two or three eggs a day out of six Buff Leghorn pullets. Is this a good percentage for this time of year? 2. Please tell me what is a good feed for the chickens that I just mentioned with a cockerel. I would like to feed one feed a day of table scraps and I would like to know of a good, cheap and simple feed for the other one.

Fremont, Neb. A. W. F.

Answer.—1st. This is not a very good average for Leghorns at this season of the year. 2d. There is no better feed for laying hens than a No. 1 whole wheat.

Editor American Poultry Journal.

Dear Sir: Please inform me on the following subject: 1. I have some northern corn on hand and am afraid the weevils might take it. Now, some people say that High Life or Carbon is good to put in corn to keep out the weevils. That is, I mean to put the High Life in bottles and then cut a trench in the cork so as to let it slowly evaporate and it would then go down into the corn. Would it be advisable to feed such corn that has

been doctored with High Life to chickens? If same would not be advisable, then could you give me a remedy to kill the weevils which may be perfectly harmless to chickens? O. W. H. Sublime, Tex.

Answer.—We have never had occasion to use this, therefore are not in a position to answer these questions.

in a dry house with the hens at night and in a 16 ft. square pen in the day time. What would make a good feed for young ducklings? Is animal food a necessity? C. A. Gowrie, Iowa.

Answer.—Lice was what killed your ducklings. Young ducks cannot withstand the ravages of lice as well as

and am not quite decided which is the best breed to keep, White Wyandottes or White Leghorns for eggs. Please give me your advice. 2d. Is there any best way to feed the different breeds for eggs or is the one kind of feed equally as good for one breed as another. I am of the opinion what is good for one breed would not suit

Brooding House, 14x60, on Glendale Poultry and Squab Farm, Old Orchard, Mo.

Will some of our subscribers please answer O. W. H. in our next issue.

Editor American Poultry Journal.

Dear Sir: Please answer the following: Last year I hatched quite a few ducklings and lost every one of them. They all did well the first week and some lived as long as four weeks. Would be all right in the morning, have a good appetite, and by noon would find some of them dead. Some would fall on their backs and would be unable to get up until helped, would then run a little way, wobble and fall again, and then die, sooner or later. They were hatched by hens and kept

little chicks. When hatching ducks with hens, extra care should be taken to rid the hens of lice, otherwise your efforts at duck raising will be a failure. Stale bread, moistened and mixed with sand, makes a good food for young ducks. Cornmeal can also be given. After three or four weeks they can be fed cracked corn. Animal food is not absolutely necessary, although a certain amount will assist the growth.

Editor American Poultry Journal.

Dear Sir: I would like to have you answer the following question in your next issue: I am starting this spring to keep nothing but thoroughbred stock

another. What is your idea?

Maine. R. H. J.

Answer.—We never say in this department which is the best breed. The Leghorns will probably lay a few more eggs than the Wyandottes, but the Wyandotte eggs are, as a rule, a little the largest. 2d. There is no best way to feed the different breeds. Feed anything that will produce results. Whole wheat, oats and barley are good feeds for all varieties of poultry.

Editor American Poultry Journal.

Dear Sir: Please advise me through your columns of the best way to kill poultry. I have always used a hatchet,

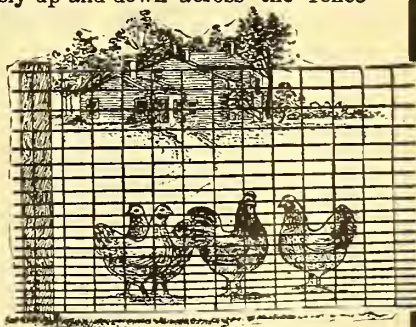

You Want a Substantial Poultry Fence

One that will not yield and tear when it receives a little extra strain, which is bound to happen occasionally, especially where poultry yards adjoin barn lots. Advance Poultry fence is strong enough to turn any farm stock. Nor is this strength wasted because it means long life—4 or 5 times as long as poultry netting or light poultry fence. Considering the extra posts and railing needed for poultry netting, Advance Poultry fence costs no more than netting. To sum up, it is several times as strong, lasts several times as long and costs no more than netting. Therefore Advance Poultry fence is the most practical fence for poultrymen.

Advance Poultry fence is of the same high-grade construction as our famous Advance Farm Fence. All whole wire, no short pieces used. Our stay wire is NEVER cut, but runs continuously up and down across the fence for many rods without an end. Thus we preserve and utilize ALL the strength and service there is in the wire, fully half of which is wasted in cut stay fences—sacrificed to convenience and speed in manufacture. When fence made of WHOLE WIRE costs no more, why buy fence made of shorts?

Sold on Approval. We want you to see and examine Advance Fence—to compare its construction with others. Let us ship you what you need on 30 days approval. After a careful examination, comparison and a thorough test, if you wish you may return the whole business, and it won't cost you a cent as we will pay the freight both ways and refund every cent you paid. Our long experience with Advance fence gives us the confidence to make this liberal offer.

We prepay freight and guarantee the safe delivery of your shipment. Write today for our Free Fence Book and Freight Paid Prices.

ADVANCE FENCE CO.

13 OLD ST. PEORIA, ILL.

but there must be a better way. Also the best way of taking feathers off a duck. H. N. G.

Las Vegas, N. M.
Answer.—By cutting the jugular vein just back of the ear on the right side or by bleeding them in the roof of the mouth. A duck should be dry-picked; this is done by pulling the

doubt noticed by many of our readers, and in justice to Mr. Zoeller we wish to say that his White Plymouth Rocks do not in any way resemble the buff variety in color. Elsewhere in this issue will be found the illustration of a White Plymouth Rock that should have appeared last month instead of the Buff Plymouth Rock. The illustration

from trap nest and egg marked and recorded she was trapped again and at 2 o'clock p. m. the second one was laid.

She had laid on the 18th, then the two on the 19th, skipped the 20th, laid on the 21st and 22d, and is still at it. On March 28 I set the two eggs and today, April 8, by a careful test, I find them both fertile and apparently doing fine

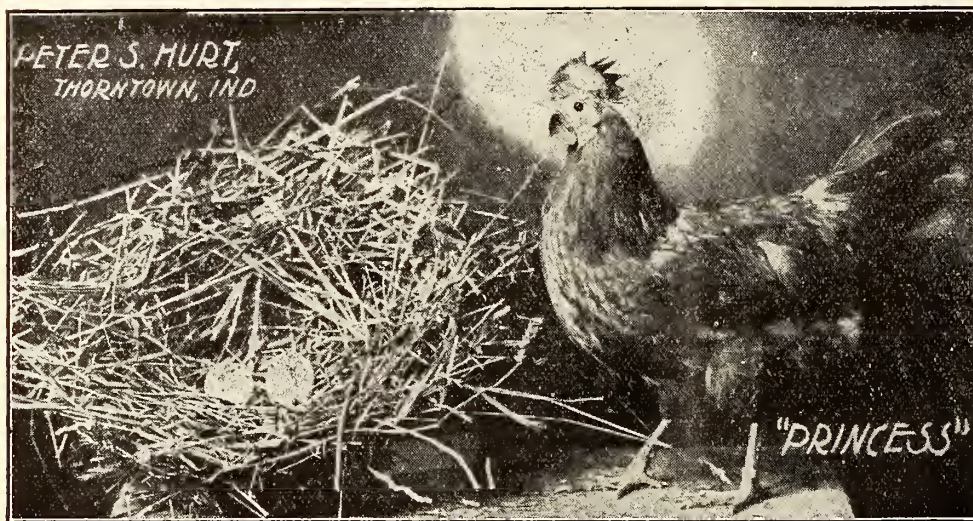

Photo of Buff Leghorn hen and the two eggs she laid in one day. Owned by Peter S. Hurt, Thorntown, Ind.

feathers in the same direction they lay on the body and should be done while the carcass is warm.

A CORRECTION.

On page 375 of our April issue appeared the illustration of a Buff Orpington under which was the following description: "First prize White Plymouth Rock cockerel at Ann Arbor, Mich. Score, 95½, by Tucker. Bred and owned by E. C. Zoeller & Son, Jackson, Mich." This error was no

of the Buff Plymouth Rock, which is the property of Owen Farms, Vineyard Haven, Mass., also appears again this month, with the proper description.

A REMARKABLE PULLET.

The above half-tone is a true likeness of "Princess," the first prize Single Comb Buff Leghorn pullet at Indianapolis in February, 1907, and the two perfect eggs which she layed in one day, March 19. At 11 o'clock a. m. the first one was laid and after being released

in every particular and see no reason why they should not hatch.

The above record is more argument that "Hurt's Single Comb Buff Leghorns Are Best by Test," as the owner, Peter S. Hurt, Thorntown, Ind., advertises and is always ready to substantiate.

A MODEL POULTRY FARM.

Poultry raisers will be interested in learning of a model poultry farm under the management of Mr. F. E. R. Goetz, of Delavan, Wis. This farm is known as the Delavan Poultry Farm and consists of thirty-five acres, well located for the purpose, near the outskirts of town and a comparatively short drive from the noted and picturesque Delavan Lake. On this farm are to be found practically all the standard varieties of poultry. The more popular breeds are raised in greater numbers, but the Delavan Poultry Farm is prepared to furnish fine specimens of the rarer and less frequently bred varieties as well. The farm is provided with excellent facilities for raising and breeding poultry. There are five large poultry houses. There is also a convenient body of water for the accommodation of large numbers of ducks and geese. Some of the finest specimens of Pekin ducks, Toulouse and Embden geese and the other well known varieties of domestic water fowl are to be found here. Embden and Toulouse geese are made a specialty at this farm. They also pay special attention to the raising of Bronze turkeys and have a particularly fine strain of these birds. A tour among the various yards discovers hundreds of fine specimens of Light Brahmans, Partridge Cochins, Buff Cochins, Silver Wyandottes, Silver Spangled Hamburgs, the three varieties of Plymouth Rocks, the different varieties of Leghorns, including both Rose and Single Comb, Black Javas, Black Minorcas, Rhode Island Reds, etc., etc. They also include among their list Bantams and Guinea Fowls.

It is the policy of this concern to give their patrons prompt attention and the best possible satisfaction. The greatest care is observed in preparing birds and eggs for shipment. It is not unusual for them to fill orders coming from a great distance, and the letters received in reply indicate the arrival of their shipments in perfect condition.

They are so confident of their ability to pack eggs in such a manner as to insure them against breakage in transportation that they sell them under a guaranty to

STEEL ROOFING \$1.50 PER 100 SQUARE FEET

Best, economical and durable roof covering known. Easy to put on; requires hatchet or a hammer. With ordinary care, will last many years. Thousands of satisfied customers everywhere have proven its virtues. Suitable for covering buildings of any kind. Also used for ceiling and siding. Fire-proof and water-proof. Cheaper and more lasting than shingles. Will not taint rain water. Makes your building cooler in summer and warmer in winter. Absolutely perfect, brand new. \$1.50 is our price for our No. 16 grade of Flat Semi-H ordered steel roofing and siding, each sheet 24 in. wide and 24 in. long. Our price on the corrugated, like illustration; sheets 22 in. wide and 24 in. long \$1.75. At 25 cents per square additional we will furnish sheets 6, 7, and 8 feet long.

BRICK SIDING, \$1.95

Just the right thing for stores, houses, churches, barns, hotels, etc. Why not fit up your old building by covering it with bright, fresh brick siding? Easily put on. Made of semi-hardened steel. Looks like brick. No special tools required. Prevents decay. Decreases fire liability. Improves appearance of premises. A aptable for buildings of all kinds. We sell immense quantities. Gives thorough satisfaction. Comes in sheets 24x58 inches. Has all good points of steel roofing. Remember we manufacture our own roofing and are the original headquarters for steel roofing.

METAL CEILINGS, \$1.95

Fine steel beaded ceilings, \$2.00 per 100 square feet. Ideal ceiling for stores, offices, kitchens, restaurants, etc. No falling plaster. Always neat and attractive. Economical and lasting. Furnished ready to put up. No special tools required. Comes in sheets 24 inches by six and eight feet long. Also used for siding.

WE WILL PAY FREIGHT ON ALL ORDERS for Metal Roofing, Beaded Ceiling and Brick Siding to points east of Col.—except in Okla., Tex. and Ind. Ter. Prices to these points, freight paid, furnished on application. We guarantee all roofing to be as represented. All kinds of roofing supplies—galvanized conductor pipe, eave trough, pipe, fittings, plumbing supplies, etc. Write for free catalog No. 96

CENTRAL MACHINERY & SUPPLY CO., 547-559 State Street, CHICAGO, ILL.

replace any that may be broken in transit. It would seem that they take great chances in doing this, but their experience justifies them in the policy, as very few cases occur where an order has to be replaced.

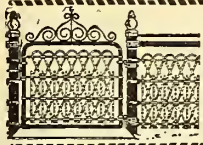

Another feature of this farm in which the proprietors take great pride is the quality of their stock. As stated in their advertisements, they are willing to place their birds in competition with any in the country. Parties ordering stock from them frequently receive birds that carry off prizes at the local shows, as is witnessed by the following letter:

Old Forge, Pa., Jan. 23, 1907.
Mr. F. E. R. Goetz, manager Delavan Poultry Farm, Delavan, Wis.

Dear Sir: I received a pair of Dark Brahmas on the 11th inst., and am highly pleased with them. I took them to the show which was held in Scranton and received two second prizes. Very truly yours,
John Ainsley.

Mr. Goetz is constantly receiving letters from all over the country, expressing the pleasure of those to whom they have sent birds and eggs, and also universal satisfaction with the treatment they received. In addition to the stock raised on the home farm they have arrangements with a num-

ber of farmers in the vicinity to rear poultry for them. This plan insures the birds being reared where there is plenty of room, which produces stronger and more vigorous specimens. Anyone who contemplates purchasing either birds or eggs will do well to write to the Delavan Poultry Farm, inclosing 10 cents for their large catalog. Their advertisement will be found on page 500 of this paper.

WANTED—10000 POULTRY RAISERS

To learn this month the "HOW" of successful and profitable poultry keeping by knowing the secret and science of selecting the laying from the non-laying hens in their flock. Have every hen in your flock a laying hen; that's the new way, the money making way of keeping chickens. Pick the layers from the loafers, save the cost of feeding the drones, the non-layers. You can do it if you know the POTTER SYSTEM. It is a simple, scientific and positive method of making poultry pay. Why not gain this valuable knowledge and be saving money and making more money on the birds you keep. Thousands now use the Potter System, and thousands more will have to know it before they know what success with poultry is.

DON'T BUILD THAT NEW HEN HOUSE or think of fixing up the old one until you have secured our large new 64-page catalog on poultry house fixtures. The biggest and best ever issued; over 50 illustrations showing hen house fixtures in three styles and twelve sizes. No poultryman can afford to be without this book. You can have complete, convenient and sanitary fixtures in your house. You can save time, labor, worry and money in your poultry work if you will use judgment in fitting up your house.

Our Catalog tells you how to keep free forever from those pests—LICE and MITES. It has cost us hundreds of dollars, but we send it to interested poultrymen for a two-cent stamp to cover postage. Write us today for free circulars on the Potter System and our new catalog. They will please and interest you.

on HALF AN ACRE of ground, growing Ginseng. Another is making hundreds of dollars per year growing Mushrooms in an ordinary cellar. Others are making big money growing Golden Seal and other medicinal plants, of which the wild supply is fast becoming extinct and prices rapidly advancing. YOU CAN DO THE SAME. Our new monthly magazine, PROFITABLE HOME INDUSTRIES, tells you all about it; full details; letters from successful people. If you want to make money, write us to-day. Price \$1.00 per year, 3 months trial 25 cents, sample copy 10 cents.

**WHITE PLYMOUTH ROCKS**

America's Best General Purpose Fowl

Choice birds for sale. Eggs for hatching in season from choice matings, \$3 for 15; \$5 for 30; write for what you want. 25 years' experience in poultry breeding. Life member of A. P. A.

J. B. Howe - W. Rock Specialist - Kentland, Ind.

CLASSIFIED ADS.

Under this heading ads will be inserted for six cents per word each month for less than three months, **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Sixty thousand per month.** We guarantee an average monthly circulation of 60,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

"DUKE OF KENT" STRAIN OF S. C. Black Orpingtons. No strain of Black Orpingtons in the world stands higher. Season, 1907. There isn't a state in the Union where, in the shows of the present winter, a splendid list of first prizes have not been carried off by cockerels and pullets hatched from eggs shipped from my yards last year. One customer writes: "I got three cockerels out of the setting, and this week, in hot company, I took first, second and third prizes at our big show. The judge said the first prize bird was the best Orpington he had ever handled." Eggs now ready; \$4 for 13; \$7.50 for 26. You cannot get any higher grade eggs, even at \$10 per setting. Last year I could not supply half my orders. Fifty prize winning cockerels for sale at \$10; others cheaper. Write postal for chromo of "Duke of Kent." Sent free. D. N. Foster, Ft. Wayne, Ind., State Vice President of American Orpington Club. 2-4

1 FOOD 2 FOR THE

LITTLE FELLOWS

Nursery chicks need especially good food—it must be adapted to their delicate digestive organs. Maybe that's why so many of your chicks die. They won't if you feed the baby chicks No. 1 Midland Poultry Food from the first feed until they are two weeks old. By that time they will be ready for No. 2, which will keep them growing. These two foods will insure you raising a greater percentage of your chicks this spring than you ever raised before. Just try it and see.

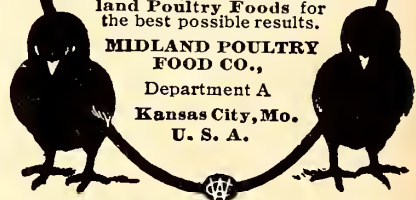

Midland Poultry Foods

are fed in mash form. The fowls therefore get all the elements we blend in the food to make a proper scientifically balanced ration. Cannot eat the parts they like best and leave the parts they need most. There are many advantages in mash foods, but if you prefer a dry chick food we can supply you the best one made in our Midland Chick Food—all food—not two-thirds broken rocks and cheap grits with a few seeds. Midland Foods are used by more successful poultrymen than any other food. Why? Because they have proved their value as money-makers. Write today for our two poultry books, "The Science of Poultry Feeding," and "Poultry Feeding Perfected." They will be worth dollars to you but we send them free and tell you how to buy and feed Midland Poultry Foods for the best possible results.

MIDLAND POULTRY FOOD CO.,

Department A

Kansas City, Mo.
U. S. A.

They Go at the Price of One.

The Phoenix Poultry Plant and 300 choice White Plymouth Rocks, prize winners for 15 years, all stock at a sacrifice as we must close them out to go into other business. Will explain if you write to Phoenix Poultry Plant, Mrs. J. H. Orshaugh, Batavia, Ohio. Eggs for hatching now fresh and fertile.

LITTLE CHICKS

Hatched from thoroughbred heavy laying strain S. C. Br. and White Leghorns, Barred, Buff and W. P. Rocks, White Wyandottes and R. C. R. I. Reds. I have been shipping thoroughbred chicks for over three years. Eggs I use for hatching cost from \$2 to \$3 per sitting. Write at once for my 1906 circular which tells all about them.

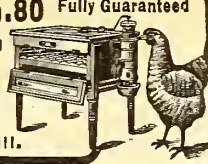

CHAS. E. MURBACH

879 N. Leavitt St.

CHICAGO

KLEIN & ANDERSON

MACON, ILLINOIS

BOGARDUS' S. C. BUFF & BLACK ORPINGTONS

Have shown their superiority by winning the big end of the desirable prizes at such shows as Chicago, Cincinnati, Hagerstown, Md., and Frankfort, Ky., State Show. At the great American Poultry Association Show at Cincinnati, Ohio, Jan., 1906, they won seven 1st out of a possible ten at Chicago, 1907, seven regular prizes. These winnings in the strongest competition is proof of their quality. Why pay twice as much elsewhere and get no better, possibly not as good. Twelve very choice yards mated to produce winners, and they will do it. After June 1st 200 fine breeders for sale at rock bottom prices. They must go as I have 500 February, March and April hatched chicks and must have room. Write me your wants, I can and will please you. Catalogue free.

O. A. BOGARDUS

Box 31, WARSAW, KENTUCKY

HONEST INJUN

You'll like the poultry feeds with the head of Old Sleepy Eye on the sack—it's a sign of honest quality that you can count on every time—there are none better, few so good.

SLEEPY EYE

Poultry & Chick Foods

are prepared from the choicest of grains and seeds that grow, blended to give the best results. The **Chick Food**, is the food you'll want right now for your little chicks; the **Poultry Food** for older fowls. You feed them dry, right from sack. Write today, give us name of your dealer, mention this paper and tell us number of fowls you feed. We'll send you samples of both feeds and a set of beautiful Indian Post Cards in colors, free. Write for them today—a postal will do.

SLEEPY EYE MILLING CO., Sleepy Eye, Minn.

VIGOROUS CHICKS

are the results of **Petaluma Incubators**. They maintain Nature's conditions. They have no accidents, make no failures. Catalogue free. **PETALUMA INCUBATOR COMPANY, Box 150 Petaluma, Cal. Box 150 Indianapolis, Ind.**

THE OIL THAT'S RIGHT

Is the only kind you should use in your incubators and brooders. Many chicks are killed by the deadly fumes from ill-smelling, gummed-up, smoky lamps.

WYANDOT WHITE OIL

is refined by special process, goes through the wick without clogging and burns with a steady flame preserving even temperature. Write for free circular and price.

THE WYANDOT REFINING CO., Dept. A., Cleveland, O.

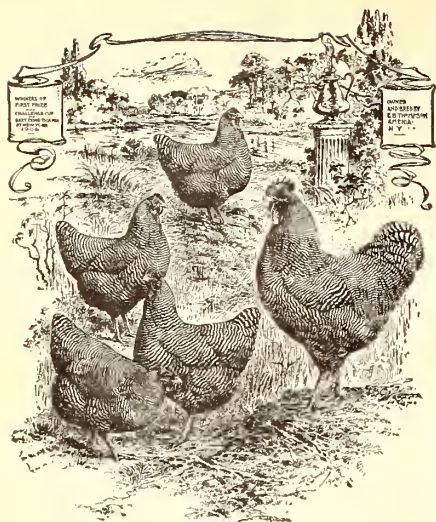

MONEY PLANTED WITH ME GROWS

You can buy baby chicks for less money than good eggs cost. Leghorns, White and Brown; Rocks, White and Barred; Wyandottes, White; Minorcas, Black. Send for circular.

"RINGLETS" Soar Still Higher

At the Imperial Show of the Nation
Madison Square Garden, New York

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" cleans sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 101 prizes. 48 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

Our Cochin Bantams won 4 firsts, 2 seconds, 3 thirds, 1 fourth, 3 fifth places, 4 special ribbons and two bronze medals.

At Auburn, N. Y., week of Jan. 7 to 12, 1907, we won the silver cup for Barred P. Rocks, having scored 11 points more than our nearest competitor, winning 1st and 5th places in cock birds, 1st 2d and 5th place in hens, 1st, 3d and 5th place in ckls., 2d and 4th place in pullets and 4th and 5th pens.

In White Leghorns we won 2d place in pens and 5th place in pullets.

Our Cochin Bantams won 12 firsts, 5 seconds and 2 thirds.

We have for sale a fine lot of pullets and cockerels from our blue ribbon winners. Eggs for hatching. Send for mating list.

BUFFS THAT ARE GOLDEN BUFF

All Our Breeders Going At One-Half Price

S. C. Buff Orpingtons, Plymouth Rocks, Wyandottes and S. C. Leghorns. Our Buffs have proven themselves the largest winners at the Greatest Shows, in competition with the best in America, again over 100 prizes at Minneapolis and St. Paul Shows in Jan. 1907. Owing to the large amount of youngsters I offer my entire stock of 1000 breeders including all my prize winners, at just one-half price. Send for our new illustrated Catalog on Buffs, it tells the story and saves you money.

Iowa Falls, Iowa

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan lub Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans.

Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

\$7.90 FOR OUR 100 EGG HATCHING WONDER INCUBATOR

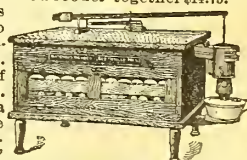

Delivered, in U. S. east of Rockies, or with Brooder, making complete outfit only \$11.50. The 100-egg Hatching Wonder has triple case, large aluminum-coated tank, double-jacketed heater and our Victor Regulator. The lamp has a big bowl, wide burner and stout metal chimney. Ventilated egg chamber with double glass in door contains movable egg-tray with nursery below. The machine is 26 inches long, 21 inches wide and 14 inches high. In addition to this substantially built incubator, with its egg-tray and nursery, aluminum-coated tank, double-jacketed heater, modern lamp and automatic regulator, the \$7.90 price includes a thermometer, funnel and book of instructions, telling how to get the best results from the incubator, all delivered at any railroad station east of the Rocky Mountains. If the Brooder is ordered with the Incubator the price of both is only \$11.50 delivered anywhere in U. S. east of the Rockies. The price of the Incubator delivered west of the Rockies is \$9.90 and the Incubator and Brooder together \$14.75.

Better write us today; we will ship promptly on receipt of your order. Money returned if not as represented.

If you want a larger machine write for our 80-page "Victor Book"

"THE WILLETT IDEA"

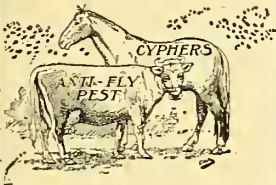

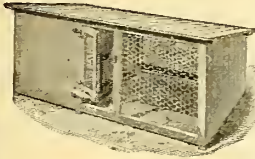

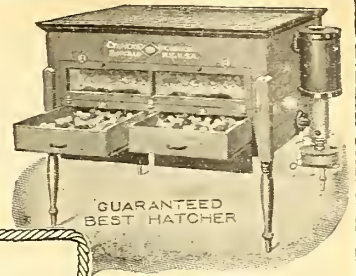

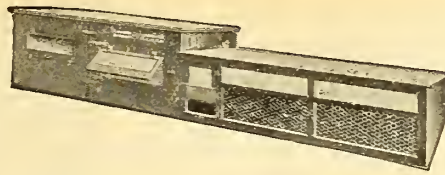

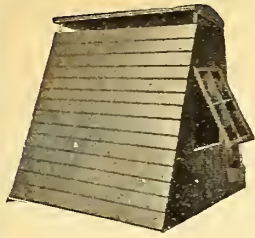

Preserves your eggs for many months with WILLETT'S WATER GLASS EGG PRESERVER just as fresh as the day they were laid. The only SURE way of preserving eggs to sell at high prices. Eggs preserved in Willett's Water Glass comply with pure food laws. If your dealer cannot supply you, write us direct and send his name. Agents wanted. Write for particulars and prices

Willett's Water Glass Egg Preserver Co. - Box 56, Anderson, Indiana

Ring's White Rocks

Four 1sts, a third and fifth, at Chicago on five entries, nearly a clean sweep at Detroit, and again at Chicago with more prizes than all the competitors, including Silver Challenge Cup for best display. Every one of the above winnings made with birds of my breeding. It settles the question of their top notch quality beyond dispute. The winnings of my customers furnish additional proof of this quality, and convincing evidence of the value and treatment given for their money. "Hendry's" 93½, the highest score ever given to a White Rock cockerel in competition, was raised from eggs bought of me last season and now heads my first pen. His sire heads another. My customers get the best I have, line bred through generations of winners at the largest shows, and are enabled to win in the strongest company. Send for my matug list and special prices this month. Bargains in stock of both sexes.

CHAS. H. RING, R. F. D. DECATUR, MICH.

YOU CAN BUY POULTRY SUPPLIES DIRECT FROM THE MANUFACTURER

To save you money and time; to lessen freight charges and insure quick delivery, we maintain **seven places of business**—offices and warehouses, the addresses of which are given below. It is well known that Cyphers Poultry Supplies are the best. Therefore we **both save you money and give you quality**. There's just as much difference in lasting quality of poultry supplies as in clothing. It pays to get the best, especially when you get them at the same price as inferior goods. Agents all over the world sell our supplies. Ask your local dealer for Cyphers goods and accept no other. If he does not sell them, please write our nearest branch office. GOLD IN THE GRIT BAG

Here is what the miner would call "pay dirt" for it will put money in the poultryman's pocket. It's nature's own product made from the natural rock and ground to the proper sizes for feeding all kinds of poultry.

LOPEZ GRIT

contains valuable mineral properties which enter into the fowl's system and assist the digestive and egg-making organs in the production of eggs and vigorous growth. Turkeys, ducks, chickens, geese, little chicks and pigeons thrive on it. It's a most economical and profitable grit; just what you are looking for, 50 and 100 lb. bags. Car load lots if desired. Send for free sample. Agents wanted.

LOPEZ SANDSTONE CO., Box B, Wilkes Barre, Pa.

The Root Colony Coop

The Permanent Colony House Plan With Its Simple and Economical Methods, Is Best Illustrated In The ROOT COLONY COOP

THE biggest reform in growing methods has been caused by the advent of colony houses. No other method is so economical and universally successful. By the use of portable colony houses the youngsters can be scattered over the farm, and easily moved from place to place. Of all the methods this is the best for no chicks can make the most *successful development possible* under cramped conditions, no matter how good the *care*.

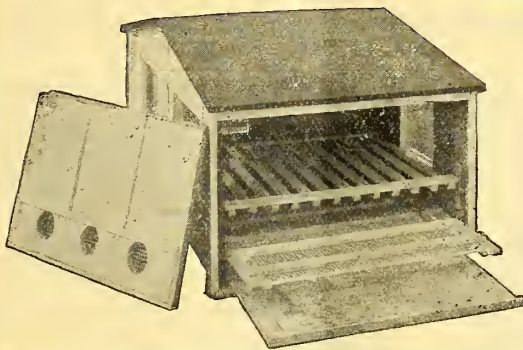

The Root Colony coop contains some new and practical features not found in other coops of this class. The illustrations explain and Mr. McClave's letter confirms their practicability.

LINWOOD FARMS, NEW LONDON, O.
May 18, 1907

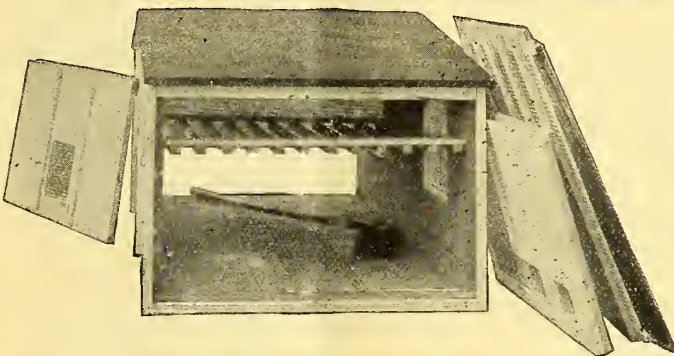

In my long experience here on Linwood Farms no colony house has ever pleased me as your Root Colony house. It is all you say, non-crowding, fresh air, perfectly sanitary, and more—the best constructed house I have ever seen

Yours truly,

CHAS. McCLAVE.

The parts in the Root Coop that make it non-crowding and sanitary

Parts removed for breeding use

That's final. If you have held a doubt or prejudice it can no longer fairly exist. For you know Mr. McClave; for a quarter of a century you have heard of him as one of America's foremost poultry-men, you have seen him judging in the show room, and you know him as a *man* among men. There is no further evidence—none is needed.

The question now is can you afford to go through another growing season

without equipping with this chick saving, labor saving, *money saving* house? You know the advantages of colony houses, and from your past experiences you can count the losses—losses that the Root Colony Coop will save.

May we send you our descriptive catalogue? A postal will bring it.

Barred Rock Headquarters Eggs, Eggs, Eggs

Thirty pens mated for 1907. Bear in mind when placing your egg orders that we have won more first prizes at the big Chicago shows in the past fourteen years than all competitors combined. We still have 300 choice birds for sale. Large catalogue and mating list for stamp, showing you where the creamy ones are raised.

R. E. Haeger, President

B. E. Rogers, Secretary

Did We Make Good?

After a representative of this paper was at our place he said in the August, 1906, number that we had some young stock coming along that would be heard from. Did We Make Good? Westchester Co., Sept. 17-23, four 1sts, two 2ds, two 3ds, silver medal and two silver cups. Stamford, Conn., Dec. 5-8, eight 1sts, four 2ds, four 3ds and silver cup. Madison Square Garden four ribbons on six entries. White Plains, Jan. 16-21, ten 1sts, one 2d, one 3d, nine specials and four silver cups. We did make good. Eggs from pens headed by these winners \$3 and up and we will make good and give a square deal in Buff, White and Black Orpingtons, Cornish Indian Games and White Holland Turkeys. Write at once to

Fred Harries, Mgr., Worthington Poultry Yards, Elmsford, N. Y.

**WE WIN!**

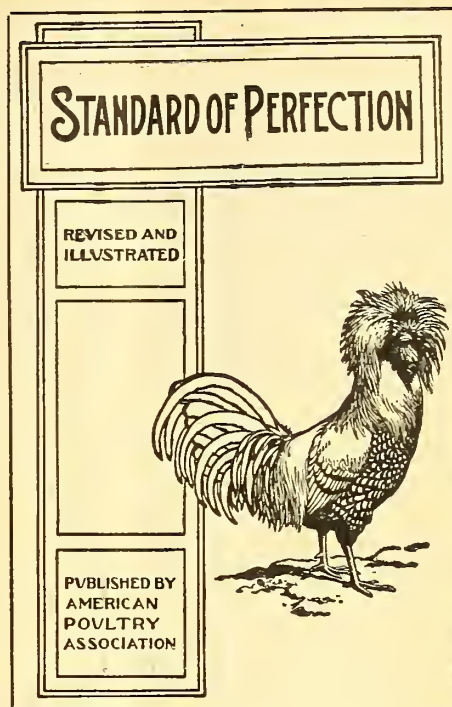

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: 7 firsts, 9 seconds, 6 thirds, 4 fourths and 3 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisements. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs from same. Do not be fooled or misled by mis-advertising, but come to the fountain head to get your start.

WILLOW BROOK FARM
W. L. Davis, Prop. Box A, BERLIN, CONN.

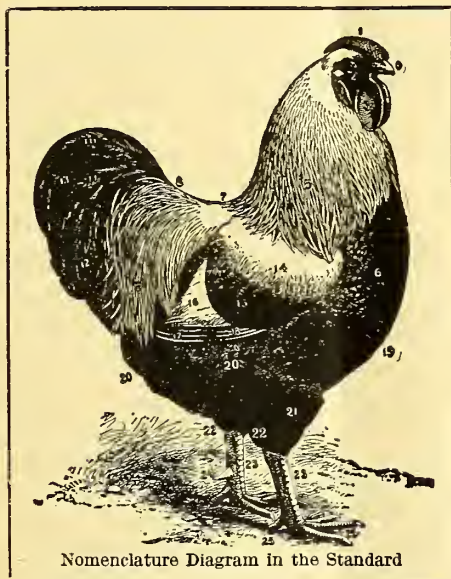

AMERICAN STANDARD OF PERFECTION

OFFICIAL GUIDE TO POULTRY CULTURE
Latest Revised Edition (1906)
304 PAGES; 135 ILLUSTRATIONS

AN AUTHENTIC AND COMPREHENSIVE
WORK ON THE TECHNICAL POINTS OF
STANDARD-BRED POULTRY

THE ILLUSTRATIONS ALONE IN THIS BOOK OF 304 PAGES COST
MORE THAN THREE THOUSAND DOLLARS

The revised edition of the Standard of Perfection was edited by a Revision Committee of the American Poultry Association and is the American authority (United States and Canada) on the required characteristics of ALL BREEDS AND VARIETIES of Chickens, Ducks, Turkeys and Geese. The contents include:

- a. A glossary (fully illustrated) of all technical terms in common use by poultrymen—a concise and positive interpretation of each word.
- b. The general disqualifications for specimens of all breeds which render them unworthy for the breeding yard and exhibition pen.
- c. Instructions to judges and the official "cuts for defects"—invaluable information for every exhibitor who wishes to be successful.
- d. The Standard shape, color and weight of every recognized standard-bred variety of chickens, turkeys, ducks and geese, 129 in number, also the disqualifications of each variety.

e. Large, full-page illustrations of a male and female of the forty-four most popular varieties of chickens, turkeys, ducks and geese. These illustrations were drawn with great care by the world's best poultry artists, and were revised and approved by members of the A. P. A. at a four-days' session held for this purpose. They portray clearly the standard requirements of the many varieties represented.

THE AMERICAN STANDARD OF PERFECTION IS AN INDISPENSABLE
GUIDE IN THE BREEDING AND EXHIBITION OF PURE BRED POULTRY

Price \$1.50, Postpaid

C. E. VASS, Washington, N. J.

PROFITS IN POULTRY KEEPING SOLVED

Title of my new book which is revolutionizing the poultry business all over the country. My great feed at 10c per bushel will save you \$25 a year on every 100 hens you feed, as well as increase your egg yield over 30 per cent. Nothing like it ever discovered for producing winter eggs and fertile eggs. For growing chicks it has no equal. No mashes or cooking feed under this great system. Broilers go 1 1/4 to 1 1/2 lbs. in seven weeks on it. No science required to feed my system. Failure impossible. Start right. Circular and testimonials free. Write today and stop that big feed bill.

EDGAR BRIGGS, Box A NEW ROCHELLE, N. Y.

McClave's Barred Plymouth Rocks

OLDEST STRAIN IN OHIO

Bred on Linwood Farm since 1874. Choice cockerels, trios and pens at reasonable prices. Eggs from twenty select matings. I also breed best prize winning White and Golden Wyandottes, White and Brown Leghorns, Turkeys and Water Fowls. Largest poultry farm in Ohio. At the late Chicago show won twenty-seven firsts, one third and six specials on thirty-one entries. Write

CHAS. McCLAVE, NEW LONDON, OHIO

WHITE WYANDOTTES

THAT STILL MAINTAIN THEIR RECORD OF WINNING THE BLUES WHEREVER SHOWN

EGGS From prize winning pens only, for sale. My strain is bred equally as much for utility, vigor, size and hardy constitutions as for beauty. My prices are low as the lowest when quality is considered. A grand lot of young stock for sale. Correspondence a pleasure.

D. D. SLADE 227 W. Short Street LEXINGTON, KY.

The Acme Trap Nest

Trap the hen without effort upon her part, without noise, blow or fall to frighten her. A trap nest that can be used up to and in the show room without danger or injury to body or plumage of the hen. Takes less room than many and no more than any nest made. The Acme is accurate in its works and it never fails to trap the hen. The act of the hen walking into nest throws the trap. It is sanitary for it can be cleaned in one moments time as all working parts come out with top when removed leaving an empty box or nest to clean. It's durable, well ventilated and comfortable. Catalogue free.

The ACME TRAP NEST COMPANY, Bedford, Indiana

NORTHUP'S MINORCAS SINGLE AND ROSE COMB

Eggs from 30 grand pens guaranteed to hatch regardless of distance. 28-page catalogue free. 68-page book, "Minorcas, All varieties," history, mating, fitting for show, etc. Fully illustrated, 25 cents postpaid. My S. C. Minorcas have never lost a special for large size, and have won more than 3,000 prizes for my customers in strong competition. My R. O. Black Minorcas have won more 1st and 2d prizes than all competitors combined at Chicago, Boston, Philadelphia and New York.

This elegantly designed and finely made Dining Table contains nothing in its make up but solid golden oak; the workmanship and finish are unsurpassed in their excellence. Six Foot Given Free with a \$10 Assortment of Groceries and other Products.

The Roosevelt Comfort Rocker. Very stylish finely figured quarter sawed oak, veneered seat, finished golden. The most beautiful and comfortable rocker ever Given Free with a \$10 Assortment of Groceries and other Products.

An Easy Way

When you purchase \$10 worth of groceries from your home merchant a number of people have had their profit and expenses added to the actual cost of the goods after they left the manufacturer and before they reached you, which you pay. When you purchase \$10 worth of groceries and other products from the manufacturers you pay no merchants' profits and expenses—you secure the goods at actual manufacturer's cost.

This accounts for the fact that we can give you your choice of \$20 worth of products, usual retail value, without premium for \$10. Or we give you \$10 worth of products, usual retail value, and a \$10 premium both for \$10. We pay the freight by enclosing extra goods to cover freight charges. Every article and every premium is guaranteed to give satisfaction or money refunded.

The largest winners at the **GREAT A. P. A. SHOW 1907.** Some choice yearling hens for sale at way-down prices. A limited number of eggs at half-price after June 1st. **JOE COLEMAN**, Bellville, Ohio. Secretary National S. C. Black Orpington Club.

THE PRAIRIE STATE BROODER

A Spring, Summer or Winter Brooder House If you have not investigated the **No. 5** you ought to get busy because it is one of the most satisfactory brooders ever made. It is portable making it desirable for use in any kind of a poultry house or as a colony house on the open range without any change.

Being enclosed (see cut) it can be used as an individual lamp brooder in colder localities than the plain Universal Hover can be alone. Top is covered with a removable Cloth Screen instantly changing it from a winter to a summer brooder. Hover lifts out making it easy to clean. Consumes but little oil; supplies abundant ventilation even in hottest weather; top affords sun shade. We can't tell all its good features here—

Get Our Brooder Catalog

showing it in several forms and describing its many useful adaptations. With the No. 5 chicks can be raised during June and July unusually successful. We will also gladly mail our 1907 Incubator catalog which tells why the Prairie State hatches extra large, strong chicks with greater ease and certainty.

MODEL Incubators and Brooders

Q. Commercial poultry raising without incubators and brooders would be like trying to carry on transcontinental traffic with a prairie schooner. Buying your incubators and brooders of a manufacturer who does not know the poultry business would be like buying a watch made by the town blacksmith. I manufacture and sell Model Incubators and Brooders, but I also use them, use large numbers of them; in fact, am the largest poultry raiser in the world.

Q. At the Model Farm I have more growing chicks than any other five poultry farms. This is a Commercial Poultry Farm—a poultry farm that is a money-maker. Am working in a large way, and accomplishing some things heretofore not attained. I am now raising thirty thousand layers. The Model Incubators are producing splendid hatches. The thirty thousand layers are being brooded in Model Colony-Brooders. The large brooding systems which hold fifty thousand chicks are being used at their fullest capacity, raising broilers and roasters, but for laying stock no other brooder will grow such a vigorous bird, and in so large percentages, as the Model Colony Brooder.

Q. The Model Equipment will hatch and rear chicks for you in profitable percentages. Poor hatches make low profits—too many dead chicks, a dead loss. **Model Customers Increase Their Flocks**, and have successful years. Why not you? I know the poultry business, and have proven my knowledge. I made the Model Farm pay running expenses and show a handsome profit in the first six months. The successful results I have accomplished for myself, and have helped others to, I can help you to, whether your plant is large or small. In buying the Model Incubators and Brooders you buy a claim on my time, and I will stay with you until your plant is a Commercial Success. Send in your order now! I will make prompt shipment by fast freight. A vacation trip to the Model Farm will prove of interest and value. Don't miss it. Catalog sent free.

THE MATING OF THE BREEDS.

Some of the Lines in the Breeding of Partridge Wyandottes That Must Speedily Be Considered and Which Are Now Being Neglected—Too Much Attention Given to Color Markings, Or, Rather Too Little Attention Given to Shape — How to Maintain the Variety.

Paper No. 6.—The Partridge Wyandotte.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The Partridge Wyandotte, one of the most beautiful of varieties of fowls, took all by storm when first shown, and for a few years were the popular new thing in fancy circles both in this country and England. Enormous prices were paid for what were considered good specimens of the variety in England, the prices reaching \$1,000 per specimen in more than one instance. Then in a short time the air was taken out of the inflated boom, and, quite the natural thing, the Partridge Wyandotte was found standing upon its own merits, as eventually all things and men must do in this rather practical world.

The Partridge Wyandotte is a fowl of beauty and worth. It came to the probe with its color markings bearing very strong lines, it being, seemingly, not a very difficult task for the fancier to clothe this fowl of Wyandotte shape in a dress of the Partridge Cochin. Not that color markings have been perfected in the Partridge Wyandotte, for we find but few, comparatively, of near approach to perfection in color. The striking fault seems to be that there is an abundance of brick red in the females. Then, too, the strong color seems to run out in fluff and back.

But it is in shape that the Partridge Wyandotte, as exhibited, has its greatest failing. During the past few years, notably the last two exhibition seasons, we have found far more than a majority of specimens shown to be of very poor shape, in many, too many, instances there being a near approach to the Cochin shape. This failing seems to be a general one, and unless the breeders speedily correct this evil the departure of the Partridge Wyandotte from the show room and from fanciers' pens will soon be made permanent.

Mr. W. A. Doolittle, who by reason of his ability as a breeder and success as an exhibitor is well qualified to advise the fraternity as how best to mate Partridge Wyandottes, says:

"Ancestry should be first considered. Too much stress cannot be put on this point as birds coming from a line of meritorious ancestors that have been produced by proper matings for years are worth much more than those seemingly as good that have come from chance mating. The former can be depended upon to produce their equal and a per cent of their superior; while those from a chance mating, yet seemingly as good, are almost sure to prove a disappointment.

"I take ancestry first into consideration, choosing the best birds that have come from the best dams, grandams, etc., and from the best sires coming from the best grandam and grandsire. To do this it is necessary to use trap nests or mate pairs and mark the chicks as soon as hatched. A record should be kept of all markings made from year to

year. In this way you will be able to keep track of your pedigrees and markings.

"Next to be considered is shape. See that they have the proper Wyandotte shape. Remember shape makes the breed and color the variety. As the male is equal to one-half the pen I will consider him first and too much care cannot be taken in his selection. If possible consider his ancestry; see that he has the Wyandotte shape, a broad, deep, well-rounded breast, full hackle and saddle, rising with a concave sweep to tail and let me say that my preference for a breeder is one rather short in tail, appearing not to be fully developed. A large per cent of the birds as bred are too long and too high in tail. Keep track of the young cockerels and pullets that seem blocky and slow in developing tail. If you continue to use as breeders birds that developed tail too young you will soon have a flock of Leg-horn tails.

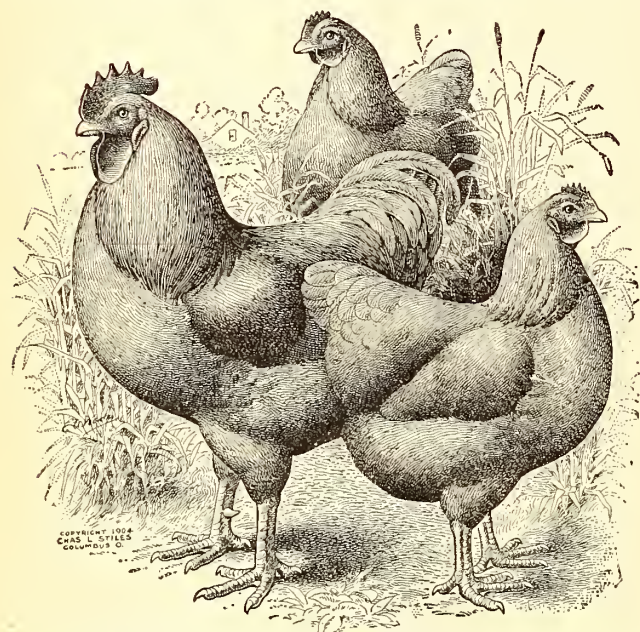

"The male should be active, strong and vigorous and attentive to his mates. One that is disposed to be cross to them, picking them and driving them away from their food is not likely to be a good breeder. Some males will feed their mates and almost starve themselves. You may be sure this bird is a good breeder, but he should be taught to eat from your hand and for such birds there is nothing equal to whole corn, fed from the hand once a day.

"In color the birds should conform to the standard. His under color should be slate, breast greenish or glossy black; back should be broad and flat at shoulders, in color dark red; saddle red with black stripe down the center of each feather; fluff black or black tinted with red; primaries black on inner web; bay edge on outer web; secondaries black, outside web red terminating with black at end of each feather; covers greenish black forming a well defined bar of this color across the wings when folded; tail black; sickles and covers glossy greenish black; lower covers glossy black, but may be edged with red. Comb should be of good Wyandotte shape, but I should not sacrifice other good points merely for the sake of comb so long as it is rose, and I know the bird has come from a strain usually having good Wyandotte combs.

"Hackle and saddle well laced and the entire plumage free from white. I bred Golden and Buff Wyandottes in their early days and in my experience white in plumage of any of the Wyandottes, except the White Wyandottes, is a serious defect and one hard to get rid of. To be a success one should be with his birds every day while they are growing; watch the young cockerels; those that have well penciled breasts or more properly speaking those that are barred, while in their chick feathers and molt into adults with glossy black breasts will, if they have come from a proper ancestry (and these are usually the birds that have) prove to be the birds that will produce the well penciled pullets. You may rest assured that if he has a well laced hackle and saddle and comes from ancestors that have been produced by proper matings he will produce good cockerels as well. In this way good males and females are produced from single matings. I have always produced my show birds from single matings. Many times my first prize male and female were full brother and sister. Therefore I shall always discourage double mating. Why should a breeder so mate his birds that all of the males from one mating and all of the females from another mating should have to be discarded, and last, but not least, what happens when a customer purchases a fine male produced from a male mating and a fine female produced by a female mating, and mates them together? Nothing but failure and disappointment.

ment. In this way many have given up a breed in disgust who otherwise would have made true fanciers and valuable aids to the breeders of this variety.

"In choosing females the same attention should be given to her ancestry as to that of the male and she should be of good Wyandotte shape and good in size as it is she that largely governs the size of the offspring, the male governing shape and color to a great extent. She should be well penciled throughout and free from shafting; under color slate; hackle red with black stripe through each feather. The standard now permits penciling in hackle and I think it is one of the strong points to look for in a good breeder, for without it you will not get well penciled pullets. The color throughout should be mahogany red or reddish brown, distinctly penciled with very dark brown, the standard calls it; I think it should be black. If your females come from well marked ancestry that have been properly mated for years, have the Wyandotte shape, are rich in color and are well penciled throughout and have some penciling at least in lower hackle they should be valuable breeders. However, to get the best results judicial line breeding should be practiced. Do not expect to produce good birds from entire out crosses. There are several strains of Partridge Wyandottes; for instance my strain of Partridge Wyandottes has been produced by certain crosses and single mating and to cross them with another strain that has been produced by different crosses or those that have been pro-

Buff Plymouth Rocks, second prize cockerel, first and second prize pullets at Streator, Ill., 1906. Bred, owned and exhibited by Orange W. Wells, Manville, Ill.

duced by double mating means failure except as mine have been line bred they would show their influence over birds that were not line bred.

"In nearly every flock there is one hen or pullet that is superior to all others. A pullet that surpasses all others in penciling is especially valuable. Each egg from this pullet should be incubated and the chicks marked; use the best penciled pullets from this mating and so on. Also choose each season the best cockerels from this mating. Follow advice as to selecting the cockerels and you will be surprised in the improvement of your flock. To line breed mate the best pullets of this mating to their sire and the best cockerel to his dam and so on.

"Do not lose sight of care and feed for as much depends on this as on the parent stock. Good health is the secret of fine condition and is never the result of improper feeding or care. Without health and vigor all the labor you can bestow upon them will not make show birds of them. You may take two lots of chicks, equal in every respect, coming from the best of parent stock; give one lot proper care and feed, the other improper care and feed and they will not resemble each other. The first lot will develop into a fine flock of good birds, good in shape, color and markings. The second will be nothing but culls, off in shape, off in color and they will not even be marked like the first lot. When you reach the point that calls for the statement, "I cannot grow

my chickens to proper size," depend upon it the fault is yours and you should learn to remedy this evil or give up trying to raise fancy poultry. This point is made very plain to me. I ship eggs every season to hundreds of customers all over the United States and Canada. Some will complain that the birds raised from them are undersize and sometimes will report they are all culls. Others who received eggs from the same yards and at the same time cannot say too much for the birds they have raised from them and later will report having won with them at leading shows. The first party blames the parent stock when the blame should rest with him. The second party deserves at least a part of the credit.

"I wish to impress upon my readers lastly, but not least, that improper care and feeding will not produce show birds, no matter what the parent stock may have been. Even hard work and attention, if improperly bestowed upon the birds, will not change the results.

THE GAME COCK.

Its Origin and History; Past and Present.

Written for American Poultry Journal by Rev. C. E. Petersen, Pembroke, Maine.

(CONTINUED FROM MAY ISSUE.)

Spurs in both silver and gold were used, and much skill and much money expended in their manufacture, as a great deal of money which was put up on the fight might in a larger measure depend on the spur as well as on the courage of the cock.

It seems that France was the first country to prohibit cockfighting, as it is stated a council in 1260 made it an unlawful sport because of some rowdiness and mischief to which it had given rise.

It was also prohibited in England by Edward III. in 1365; by Henry VIII., and by Cromwell in 1653, and it has been stated by good authority that Henry VIII erected the cockpit at White Hall and not Charles II., as stated by some writers.

James the First, it is said, was a frequent guest at cockfights and took great delight in them.

I have often wondered whether cockfighting was included in the Sunday sports which this king made permissible, and his son later enforced, entitled The King's Majesty's Declaration to his Subjects.

Concerning lawful sports to be used. London: MDCXVIII. After a lengthy preamble he writes: "And as for our good people's lawful recreation; Our pleasure likewise is, That after the end of Divine Service, Our good people be not disturbed, letted, or discouraged from any lawful recreation, such as dancing (either men or women), Archery for men, Leaping, Vaulting, or any other such harmless recreations; nor from having May games, Whitsun Ales, and Morris Dances; and the setting up of May Poles, and other sports therewith used; so as the same be had in due and convenient time, without impediment or neglect of Divine Service. And, that women shall have leave to carry rushes to the church for decorating (decorating) of it, according to their old custom.

"But withal, We do here account still as prohibited, all unlawful games, to be used on Sundays only; as Bear and Bull baitings, Interludes; and at all times, in the meaner sort of people by Law prohibited, Bowling."

Now as May Day was a national feast day that lasted a whole month, and as cockfighting was one of the sports indulged in, and as no prohibition is made in the king's proclamation, it seems reasonable to suppose that cockfighting was one of the lawful Sunday sports, though regulated as to time by "Divine Service."

The brutality of the whole thing was never shown to better advantage than in "The Sporting Dictionary," 1803, where what was called the battle royal is described, and quoted by the editor of The Poultry Book.

"A battle royal may consist of any number of cocks, but it is hardly ever known to exceed eight, the owner of each having made good his entry by paying the stake-money, or previously contributed his share of the prize or purse (sometimes the cocks were handicapped, great winners paying more entry money, and untried cocks or stags somewhat less).

"All parties being ready, the battle or fight for the prize is begun by turning out into the pit all the cocks (that are to do themselves honor) at one time; a general melee commences like to the old jousting times, when every knight's weapon was against that of the one next him, and every one his enemy.

"Here, there, and everywhere, birds rose and fell, the last

often to rise no more—carnage at once revolting, inhuman and disastrous to all the combatants less one, and generally not one lived until the pit was cleared. Often the gallant conqueror of birds as brave and strong as himself had barely time to scramble on to the heap of slain and crow his last crow of defiance ere sinking wounded unto death”—or perhaps, “A scuffling, racing, tearing, crucial bandying of blows, vigorously dealt, a restless rushing from side to side, a savagery of killing without science or art of attack or defense, at times two or three springing high over the others, alighting again amid the battling throng with deadly effect as they buried their burnished weapons into the throbbing mass of contentious combatants below them. Now and again a pause, a shrill, ringing crow like a trumpet blast, and the living dash on the nearest foe, and over the heaped-up dead or dying another falls, another, and yet another.

“Two are left, which, though bleeding from many wounds, are yet undaunted; they meet, they rise, they fall, and, as they lie, strive yet to rise again to strike.

“One is up, he staggers, falls dead on a heap, an inanimate mass. There is a movement, the other feebly lifts his head, struggles to rise and falls!”

Is there any sport in this sort of thing, this “battle Royal?” Truly the last survivor, if any, wins—wins what?

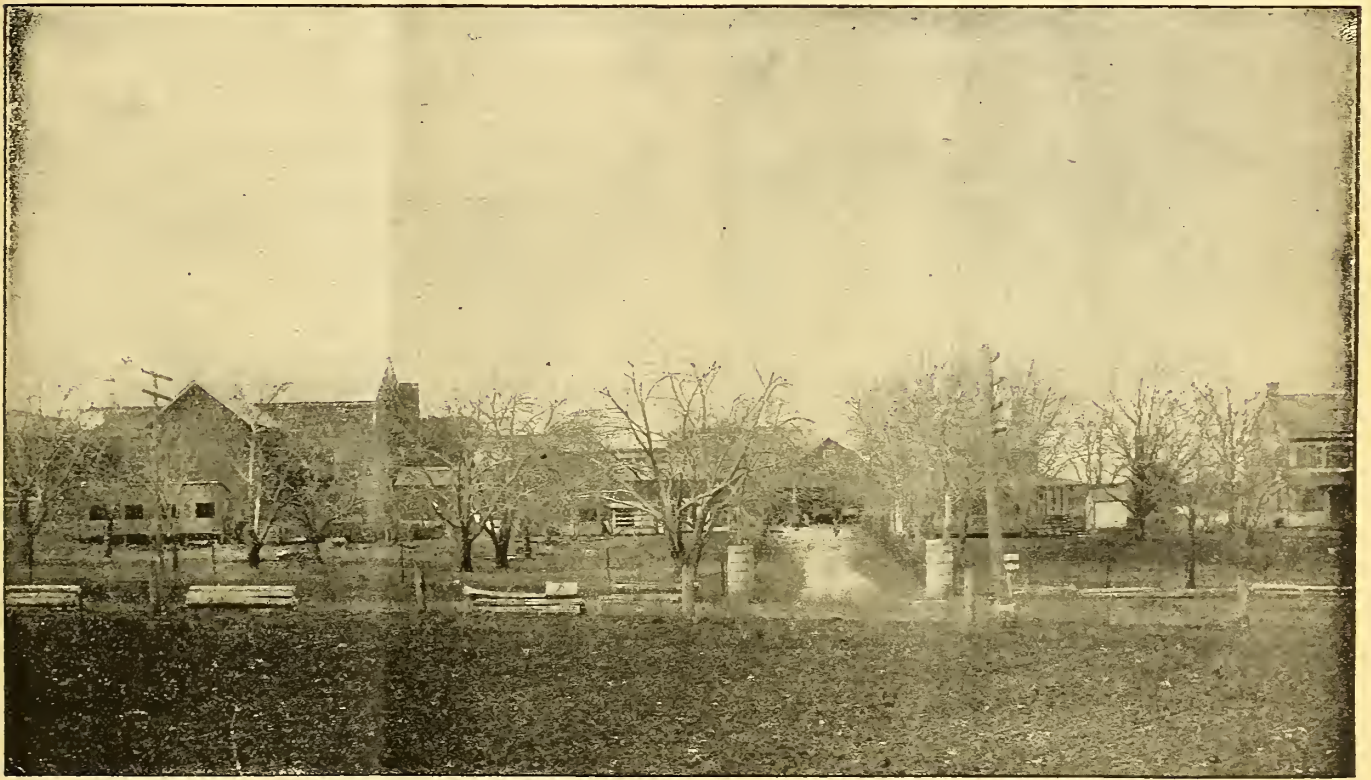

“The beak big, boxing, (the upper mandible shutting close over the lower); crooked, pointed, and hawklike; eye bold, fiery, large, fearless; head small and tapering; throat and face very loose and flexible; neck large-boned, round and strong; back short, broad at the shoulders, and tapering to the tail; breast broad, full and prominent, with well-developed pectoral muscles to give the necessary action, power and force to the wings.”

Breath and fullness of breast are most essential to Game-fowls, whether regarded from a sporting or edible point of view. In a table fowl it is indispensable. Mr. Weir’s “Derby Reds” after coming to the yard to feed, nearly always used to take wing and fly across a two-acre field into an adjoining wood, thus proving their strength of flight.

Mr. Harris maintains that “the wings should be large and long, with the quills strong and of a powerful description, so as to impart additional force in action; tail large, up and spread. The up-spread tail is indicative of spirit and of high courage.” And yet he says “We frequently read of tail too high. Whoever saw a Game-cock’s tail ‘too high?’”

A low dropping tail is a sign of weakness and constitutional debility.

There is a growing propensity among some of those acting as judges at shows calling all fowls carrying their tails

Entrance to “Fairview Farm.” J. S. Haupt & Co., proprietors, Easton, Pa., breeders of R. and S. C. Buff, White and Black Orpingtons.

Credit, renown, lasting honors, a happy life to the end of his days, or what? All the winner gains is the stake-money for his owner.

And the difference between “the battle royal” and single combat is simply one of degree, both are inhuman and cruel, and simply dishonor the name of sport.

As to the origin of the game-fowl it is proven by most all of the modern ornithologists that it is the progenitor of all other fowls, and that it is found to-day in India in its primitive form and without much doubt as it came from the Creator of all things.

It was brought over into Europe by the invaders, and into England by the Romans, and though it is stated by one writer that it was found in a wild state in Georgia as late as 1797, if this is so, it was brought over from England or France, for we have any amount of proof that it was never a native fowl of this country.

As this account could hardly be called complete without a description of the game cock and what is considered his points of excellence, I can do no better but quote again from The Poultry Book, in which the veteran breeder, John Harris, of England, gives what has been called the clearest and finest description of the good points in a game cock in existence:

high, as in many breeds they should, “squirrel-tailed.” Nothing, in the opinion of Mr. Weir, in many cases shows more want of character than “a drooping tail;” we are glad to find so ardent an old fancier as Mr. Harris agree with Mr. Weir.

But to resume Mr. Harris’ description of the Game-fowl: “Belly small and tight; thighs very short, round, and muscular, not ‘straddling,’ but the thigh crooked or bent, following the line of the cone-round breast; this would make the cock as he stands close-heeled. No one with knowledge of the true Game shape would approve of a cock standing with his legs wide apart.

“Legs strong, clean-boned, and not at all gummy like some other fowls, or stiffly upright, having small spurs set very low down, or having a good bend or angle at the hock; color black for black reds, whitey yellow, or carp for other black-breasted reds.”

This bend of the hock, or more correctly, the junction of the metatarsal bone with the tibia, may aptly be compared to the bent hocks and muscular thighs of the hare or kangaroo, as furnishing them with such wonderful propelling power.

In cocks of this perfect conformation there is nothing

wasted in these individual bones, which are constructed so as to enable all to move with velocity exactly commensurate to their distances from the center of action. "Feet flat, thin, with long taper nails; in hands evenly balanced, what 'cockers' term 'clever;' firm, but corkey and light-fleshed, mellow and warm, with strong contraction of the legs and wings to the body."

A finer description of a Game-cock could not well be made; every touch shows a master hand.

The most serious defects are set forth by Mr. Sketchley, in *The Cocker*, as

Flat-sided and thin generally, deep keeled.

Short legged.

Short, thin neck.

Imperfect eye.

Thin thighs.

Crooked or indented breast.

Duck and short footed.

Unhealthful.

Which defects may easily be seen when "up" for the purpose of handling. When bred for other purposes than for fighting, it is a most useful fowl and a most beautiful one, and no one has urged its claim in higher but well deserved praise than the late Mr. Harrison Weir in the following words: "Fine in form, graceful in carriage, beautiful in color, small in bone, with white shanks, feet, and toe nails, plenty of white flesh of unsurpassable quality, skin thin and white, fat white, with an absence of offal to a remarkable degree, good layers of delicately colored delicious eggs; while both the young and old fowls seek their living far and wide." And to this may be added a courage strong, high, and endurance.

The very fact of their training and being fought demonstrates without doubt the survival of the strongest, the most hardy, healthy, best formed, and, in short, to use Darwin's words, "the survival of the fittest." Indeed had cockfighting as a sport never existed, it can scarcely be doubted that such birds as we now write about would be in evidence. Thus our poultry-yards would not have been graced, as they now are, with a bird as useful to man as it is pre-eminently beautiful.

What other bird has the stately walk, the symmetrical form, the bold alertness, the daring, haughty look, the graceful pose and carriage? "Where is there one so agile? Where another so rich in color? or of more befitting texture of 'plume?' Erect, bold as a chief from battle with glory crowned, a natural ruler—a bird without a peer! And this because from generation to generation and century to century the best, strongest, healthiest, truest, and of the purest breed have been kept, while the weak and ill-conditioned were set aside."

This is the eulogy of an ardent admirer of the Derby Games, and what he says may in part be true, at least from a scientific point of reasoning, but the birds he describes are beautiful, and not at all like the homely mongrel fighting stags of all colors and conditions that we see in the show rooms yearly, and I am glad to notice in less and less numbers, valueless for any other purposes than fighting.

And if the old English Game, and others as beautiful, of to-day, is the final outcome of a cruel sport, then let us thank God that the dark days of a cruel past are over, and that where formerly a barbarous sport was the common thing, is now, wherever practiced, done in defiance of law, and under the cover of darkness like all other evils.

CARE OF YOUNG TURKEYS.

First of June the Best Time to Have Turkeys Hatched—Natural Food for Turkeys — Turkey Hen Best for Rearing the Young—Cleanliness the Secret of Success.

"The early bird catches the worm," but in the case of the turkey, that is, the early hatched turkey, while they may not catch many worms or bugs, they will surely catch the spring rains and, although a thorough wetting may not be injurious, long continued dampness is fatal to the lives of the little poults.

I think it advisable to have turkeys hatched about the first of June, and as many as possible about at the same time. After June first we seldom have cold rains from the east lasting two or three days, as we do in April or May.

Days of this kind that inspired the poet to sing "All day the low hung clouds have dropped their garnered fullness down," cause the deaths of many young turkeys. Turkeys young or old should be confined in the houses as little as possible. The later hatched turkeys will with

proper care and feeding usually equal in size, at Thanksgiving, those hatched earlier in the season. The weather is warmer, bugs and worms more plentiful, and they are much easier to care for.

It is not usual for turkey hens to begin laying before April 1, and by placing the eggs in a cellar or any room where the temperature does not vary greatly, they will hatch as well as fresh eggs. Each day as you add the fresh eggs turn them half over. By May 1 you will probably have a turkey hen ready to sit. If you do, you cannot do better than set her, as a mother hen—I care not how good she may be—never equals a turkey for little poults. There are several reasons for this, one of which is that a chicken stays too close to the house instead of foraging in the field as she should. A turkey's natural food consists of bugs, grasshopper, worms, weed and grain seeds, which it finds in abundance in its long journeys through the fields.

After the poults are old enough to follow the turkey they should be given but one feed a day, and that at night, to induce them to come home. Always have a supply of fresh water and a supply of grit awaiting them and often they care for no feed at all.

Let the food you supply differ from what they get during the day. That is, if they wander over fields from which oats or barley have been cut, give them corn or wheat. Later in the year, when you know they have an abundance of corn, feed some of the small grains.

But I started to tell why the hen does not make a good mother for turkeys, and now will give some more reasons.

She is inclined to leave her family when they are three or four weeks old, and this is not a good thing for the poults.

I would rather the poults had a mother's care all the season, and they are apt to have it if they have a turkey hen for a mother.

I have known a turkey hen to take her family with her when she went to lay again and when ready to sit take them under the wings at night, and after her second hatch care for both families.

Another reason for using the turkey as a mother is that she is not so apt to be lousy as a chicken, and there is no doubt that if young turkeys were not fed too soon, nor too much and kept free from lice, they would not be found hard to raise, always supposing the parent stock to be healthy—a point too often overlooked by breeders.

If you set some hens at the same time you set the turkey you can give all the poults to the turkey, provided there are not more than twenty-five.

Place her and her family in board pens, fourteen inches high, and be sure that there are no open spaces between pen and ground, else she may wander off with one or two poults, leaving the others to take care of themselves.

Before placing them in the coop dust each poult and the turkey thoroughly with a good insect powder and examine each little head for head lice.

You may have read or been told that young turkeys, being nearly bald, do not have head lice. Until last season I thought that to be a fact, never having had them on poults or chicks previous to that time.

But having found them last year, I shall look closely for them in the future. An ointment prepared and sold on the market especially for killing these pests is good, but I have used with good success a mixture of lard and kerosene in the proportion of one drop of oil to one teaspoonful of pure lard. Melt and mix thoroughly. The head, throat and neck must be thoroughly greased, but use just as little as possible.

Do not feed the poults for at least thirty-six hours after hatching and never feed sloppy food nor more than they will eat up in a short time.

Keep grit and pure fresh water constantly before them and have the pen movable so that you can move it on to fresh grass every day.

Cleanliness is one of the secrets of success, as turkeys will not live if given damp, filthy quarters. Fred Kazmeier.

Kiel, Wis.

All drinking vessels should be thoroughly cleaned and scalded at least three times a week. Filthy drinking water is the cause of the spread of disease.

This is the month that you will either make or mar your prize winners. A little extra attention this month will be rewarded next winter.

Separate the strong chicks from the weaker ones and thus give the backward chicks a chance to catch up.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded Russell Canby, Winfield, Iowa, and the second prize to Miss Jennie C. Jones, Paris, N. Y.

ADVANTAGE OF BEING A SPECIALTY BREEDER, HANDLING ONLY ONE VARIETY.

Have we not all heard this saying ever since we were boys and girls, that a person that was Jack of all trades would be master of none? And the older I get the more I am convinced it is true. Edison, our great Edison, is a specialist in his line of work; he has not tried a variety of occupations; it has been one thing that he was bound to accomplish, and I will leave it for you to decide as to his success. Whenever we see an Edison in the poultry business we see a specialty breeder, handling only one variety. I will just tell you about a friend of mine. He started some ten years ago in the fancy poultry business with every breed known to the poultry world represented in his poultry yards. The second year after starting he made exhibits at all the country and district fairs, and as there was not much poultry on exhibition except his own, and being pick-up judges to pass on the poultry, he got most of the ribbons, they not knowing the disqualifications. So when the first winter show came that year that was in reach he sent a pen of ten different varieties. And on the third day of the show I was invited to accompany him to the show, and on arriving and looking over the exhibit we found that he had just one third premium, and that was on his Barred Plymouth Rock pen, while almost all the birds of the other nine varieties were disqualified. Right here I want to say you never saw a madder poultryman in your life. Of course he wanted to speak to the judge and see why his birds did not win more ribbons, and why so many were disqualified. When he was shown the judge and he spoke to him in regard to his birds I will never forget the judge's words: "Oh, this string of ten coops are yours, are they? You must be partial to the Barred Plymouth Rocks, as they are extra in quality to what the other nine varieties you have on exhibition here are." My friend replied he was a little partial to the Barred Plymouth Rocks and would read more about them and put more time on them than he did any one other variety he was raising. "I thought so," said the judge.

"Now, I want to give you a little advice. Discard all the other breeds that you are breeding," said the judge, "and be a specialty breeder of Barred Plymouth Rocks, they being your favorites, and give them the extra time you are giving all the varieties, and from what I see from this pen of Barred Plymouth Rocks you will certainly make a success of Barred Plymouth Rocks."

And now, dear friends, he is a specialty breeder, handling only the one variety, Barred Plymouth Rocks, and he is an Edison in the Barred Plymouth Rock ranks, and he told me some time ago that, besides having prize-winners, financially since he had been a specialty breeder his income was increasing each year. Why? Because when he bred all varieties the quality of his birds was such that he had to hunt buyers at 75 cents each for his birds; and now the quality of his birds is such that buyers hunt him at from \$1 to \$25 each for all the Barred Plymouth Rocks he can raise. He takes four or five poultry papers and all he can see in these papers to read is the articles on Barred Plymouth Rocks; all he can talk about is Barred Plymouth Rocks, and when he goes to a show he never gets any farther than the Barred Plymouth Rocks, for he never gets through looking at them, to see where he could improve on them or where he could improve on his own. But he is an Edison as far as Barred Plymouth Rocks are concerned. So I believe in the old saying: "Jack of all trades, master of none." So I say breed one variety and be an Edison in the poultry world.

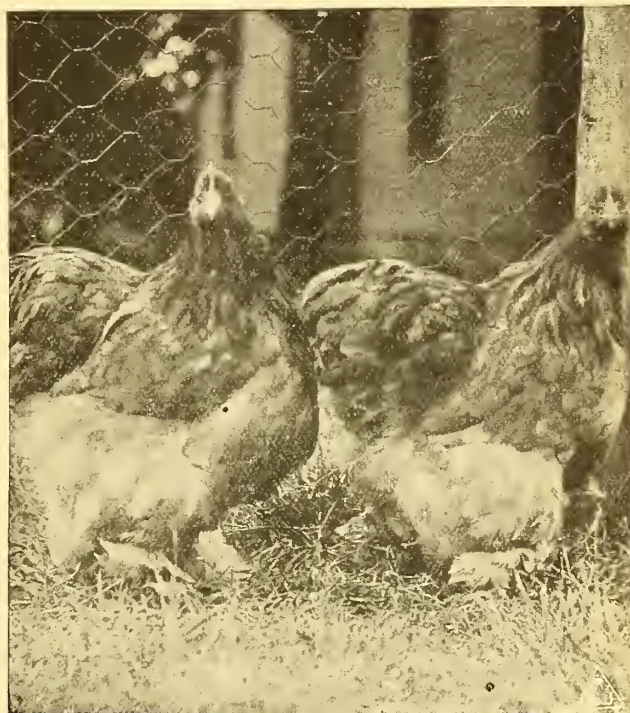

Russell Canby.

Winfield, Iowa.

THE IMPORTANCE OF WATER.

Success in the poultry business is achieved largely by careful attention to the small details of the work. Few poultrymen realize the importance of fresh water frequently supplied to the fowls. The average farmer is very careless in this particular. Knowing that so large a per cent of the egg is water, it seems strange that the cheapest article for its manufacture is so often lacking, especially in winter, when the hens are so dependent upon their attendant for their comforts. As we remember years ago, it was considered something of a joke to mention "watering the hens" in enumerating the various "chores" to be done on the farm. A hen is not credited with much sense, but I notice my White Wyandottes seem to actually think. When I replenish the drinking fountains with fresh water, they seem to know it at once, for no sooner is the fountain hung in its place than there is seen six or seven abreast drinking and tipping their little heads as though expressing their thanks.

I always get eggs in abundance in winter and I attribute it largely to this one thing—clean, fresh water at all times. It

BUFF COCHINS.

Line-bred Buff Cochins as bred by H. N. Hanchett, Jackson, Mich.

is surprising the amount of water a flock will drink in a day, and when we think of so many flocks that get scarcely any, it seems cruel to me, as I consider no task too burdensome if it adds to the comfort of my pets. In summer I always keep a pan of water in each yard as well as the fountains filled in the pens. A friend once remarked to me that he did not consider that necessary so long as the water was inside. He thought the hens had plenty of time to run in for a drink. But I notice they appreciate it and like things handy as well as the rest of us.

It is known to most poultrymen that when the hens are laying the best they are also drinking the most. I have had a pen of twenty-two pullets drink a gallon of water from noon until roosting time, which was about 4:30 in winter.

A word might be said regarding fountains. "Any old thing" will not do for a drinking vessel in a well regulated poultry plant. An open receptacle into which the fowls can scratch all manner of dirt is not to be tolerated. There are a great many good drinking fountains on the market. I would say to the beginner, don't try to get along without good drinking fountains. They more than pay for themselves in labor alone. I have Cypher's wall fountains, with one side made flat so that they can be hung on the wall at any height, so that no dirt or litter can foul the water. They are made of galvanized iron and the water will not freeze in them. I scald them every day and occasionally on wash days when there is an abundance of hot suds I put a handful of shot in them and give them a thorough cleansing.

For little chicks I much prefer Lathrop's Chick Servers. The little chicks cannot roost on them or tip them over and thus keep the floor of the brooder constantly wet, to say nothing of being without water half the time.

I will not dwell upon the importance of fresh water for the little chicks. We all ought to know they are "hard little drinkers." It is a pretty sight to see the little downy chaps stand and quench their thirst from a fresh, cool supply of water on a warm day. Don't forget them this coming summer. They are your next winter's layers. Miss Jeunie C. Jones, Paris N. Y.

THE PROCESS OF MOLTING.

The Influence of Feed on the Plumage—Condiments and Patent Foods Not Used Where the Best Results are Obtained—The Molting Period a Trying Time on the Vitality of the Fowls—Color of Plumage Affected by the Food Given.

Written for American Poultry Journal by A. D. Burhans, Lincoln, Neb.

The beauty of any Standard bred fowl when in full plumage is enough to give the beholder a determination to breed a few for the pleasure that may be derived from them. Any well bred fowl is at some time of the season possessed of a full and perfect suit of feathers, provided care has been properly bestowed when it was in the act of casting and renewing its plumage.

Fowls, both wild and domestic, molt or lose their first suit of down at a very early age; domestic in from four to twelve weeks. This down gives place to the chick plumage which is carried till the adult plumage begins to appear. The fact that our domestic fowls have three suits of feathers before maturity shows to the interested that there is a greater strain on the systems of growing fowls and chicks than that of the annual molt which follows.

Nature is quite generous when she holds back from growth the first chick feathers until the body and assimilating apparatus have grown enough to stand the demand made on them for material for the first vestment of chick plumage. The first feathers of the chick are in the shell-like protective wing flights; these usually appear on Asiatics in about eight weeks on the lighter breeds a deal earlier. They serve as a roof or cover that keeps off rain, they protect the frame from chills. After these the back and breast feathers and others over the body begin to grow. This chick plumage again is changed when they begin to mature for the adult plumage, which they wear until the next year. Two full plumages are thus grown during the first year of the chick's life.

The feed during this time should be bounteous and of the right kind. Feeding is one of the important details which besets the working poultryman. As nothing definite can be ascertained of the chick's color until almost matured, we cannot feed with the intention of influencing the color; although what is said later will apply to chicks which show the defects mentioned therewith. We find that chicks grow and develop quite rapidly if they have full range, are free from lice, have plenty of fresh water and have for feed, corn (cracked); wheat; hulled oats; milk; bugs and grasshoppers and plenty of grit and clean, dry quarters to roost in. We never feed condiments or patent foods of any kind. The "clean quarters" and "lice" phase is what hurts many poulterer's conscience. They would rather read by the evening lamp than take in hand that box of Lambert's and dust the lice infested chicks, or they would rather "go a fishin'" than clear out those roosting coops. This class of fanciers, if such they may be termed, know that the droppings will bleach the color of the plumage if they come in contact with it.

With a matured hen, the casting of the old and the acquiring of the new plumage is one of the hardest strains on her general health of the season. Add to this the probable ravages of ten billion lice and you can imagine that their chance is small if a contagious disease is threatening them. To properly care for a large flock during the molt is a deal of work, but if the fancier don't care for his flock at this time he will wonder "what the matter is" later on.

The hen which is expected to lay during the winter and second season must have attention; the fowls intended for the early shows must be hurried through the molt, and the market broilerman who depends on fertile eggs for his early broilers, sees that his fowls are fed and worked with to insure good results. Where will the early high priced

broilers come from if not from hen's eggs? Most broiler men prefer fertile hen's eggs to pullets'. They hatch stronger and end in hardier chicks.

To excite a good growth of plumage, a generous amount of green cut bone, wheat, cracked corn, sour milk, some sunflower seed and a bit of oil meal in the mash is excellent. Provide a dry clean place for roosting, plenty of grit and oyster shell and fresh drinking water. Free range in an old orchard is beneficial for they get bugs and green food. A good tonic is made by dropping a few rusty horse-shoes in the drinking water; this helps the system of the old fowls and is good for the chicks.

A dry uncrowded roosting house prevents colds and sweats. Colds tend toward roup and roup to discouragement. For colds put in one-quarter teaspoonful ($\frac{1}{4}$) of aconite to each gallon of drinking water, also add a good germicide as this prevents the contagion from spreading by way of the drinking water. Sweating causes the colors to soften, thus making the plumage liable to bleaching by the sun. This will apply to chicks as well.

Color can be affected by the foods which are fed during or immediately before the molt. We very often see white fowls, especially males whose glossy top color of neck, back and wings is quite sun-rusted. There are many causes for this, the most common being feed, too much direct sunlight and no shade. Feeding yellow corn to white fowls is an old trick and decidedly out of the question, for we find that the color of the corn enters largely into the color making pigment and is distributed through the system. This causes a sun-rusted appearance or a slight creamy tinge. To keep white birds white, do not feed those foods which have iron in their composition. Iron is one of the main constituents of color pigment and the less that is fed, the more able the fowl to overcome the tendency to creaminess. Brassiness and sun-rust are the same; they are acquired characteristics, while creaminess is in the system of the birds, in the breeding or feeding according to the circumstances. For sun-rust some of us have discovered a rust remover, which is quite legitimate inasmuch as it is applied to remedy an external state of affairs, but those who can make a "color vacuum" of a "should be" white fowl's plumage are few indeed. White is the absence of color, a vacuum, so to speak, to color pigment.

On the other hand, the most intense color, the color which is richest in color pigment, is glossy greenish black. Mr. McGrew says in a poultry publication some time since, "Brownishness in black fowls is a surplus of color pigment." (I wish the article were at hand so that more complete quotations might be given.) Brownishness in black fowls is a lack of color pigment. If the color appears near the head it is liable to be hard to overcome (according to the brownish area) for the reason that the heavy black pigment is hard to force to that altitude. Should the brownish color appear in the plumage of black fowls quite frequently, it will be a hard matter to overcome, but if in one or two sections, preferably the wings or body color, it can be overcome; that is, fed with sulphides of iron, which will drive to those vacant sections a profusion of color pigment. The main part of the black fowls plumage being black it cannot hold or contain any more color pigment, hence the supply furnished the system will have to be forced to the colorless area. As before stated, the higher the brown color in the plumage, the harder it is to remedy; for the deeper the color (i. e., the darker the color) the heavier the pigment, the lower it (the heavy color) precipitates. Notice that the blackest feathers contain the heaviest pigment in Brown Leghorn, Partridge Wyandottes, and Cochins, Black B. R. Game males and that it is invariably the body color.

A few years ago there came to our notice a communication from a city fancier to a popular poultry publication, to the effect that a certain Black Polish cock had molted out in his second year a finely mottled specimen and that the next molt he came out entirely white. The editor could not account for it. Truly a mystery—unless we look to the fowl's feed. He had lacked the color pigment making essentials and did the best he could under the circumstances.

An English journal of note once contained a letter or two from buyers of buff specimens, who claimed that the birds had been fed for a buff color which lasted only long enough to sell the birds. We are very skeptical in regard to this. Color to be influenced by feed must be done at the right time, during the molt, and the ideas that these buyers present seem to be entirely ludicrous. The birds were probably dyed. Not more than two seasons ago this dyeing act was tried in this country but was not successful.

A Buff Rock hen owned by the writer had molted lighter in color for two seasons, but the third season she was changed as to surroundings, climate and feed, to see if she with other fowls of her strain could be fed and influenced for color to a greater or less extent. The hen in question molted out as dark and evenly as she was when a pullet and the remaining "experiments" were influenced enough to warrant one in saying "the feeding did it."

The brown or reddish breast color can be remedied, in Partridge Cochins and Wyandottes and others of their general color (Leghorns, Games, etc.) by the feeding of sulphides of iron to a greater or less extent. The gray in the wings of particolored birds and buffs can also be remedied. The gloss of black fowls' plumage can be made sheenier and greener by the feeding of powdered sulphur. Bruised feathers often turn white. This is especially true of black, buff or blue birds or feathers. To remedy this, pull the bruised feather and feed iron in grains and drinking water, until the feather is entirely grown. Most all standard varieties molt lighter in color each year. Now some one says "Why don't you remedy this by feeding?"

Let me explain. A fowl can be fed for color as long as the constitution will stand up under or respond to feed and the fact that a hen's strength ebbs a trifle each succeeding molt is enough to prove that they cannot handle the materials as readily at six years of age as at two. This is true of egg production. They cannot assimilate the foods for eggs when they are five years old, as readily as a pullet or younger hen.

The system of the healthy molting fowl will place the color pigment according to her breeding, if it has color pigment at its disposal. We have come to the conclusion that the off color (white) in well bred fowls is caused by a lack of color making essentials. We cannot say, however, that any variety can be greatly influenced in color by feeding as our experiments have been limited, but at a later date we will give to the poultry public, the results of the experiments now under observance. If the reader conducts any experiments, make the conditions favorable, but don't expect to make a White Langshan black.

REARING JUNE AND LATE HATCHED CHICKS.

A Few Timely Hints on Hatching and Rearing Late Hatched Chicks, which May also be Applied to Chicks Hatched at Any Period.

Written for American Poultry Journal by J. W. Parks, Altoona, Pa.

Since there is such a great shortage of early hatched chicks, which is due to the cold, late, damp spring, which of course caused eggs to run low in fertility in the early spring, we are receiving inquiries from American Poultry Journal readers almost daily as to our methods of raising late chicks and as to what percentage of late hatched chicks we generally raise.

We have no ironclad rules for feeding our chicks, and with some broods have a little better success than others. We have been able quite often to raise every "strong" chick that comes out. We say strong, as we always kill off the small, runty ones that almost invariably come in each brood, as they are generally the ones that chirp "cheap" instead of wheat. With other broods we have lost as many as 25 per cent, while on the average I believe we can raise 80 per cent or better.

In starting to give our methods, we will start with the eggs, which should, of course, be from good healthy stock. If you are going to set your eggs in an incubator, follow the directions that are sent with the machine, as I believe the man that makes the machine should know what to do and when to do it.

If you are going to set your eggs under hens, I would be sure and see that the hen has been clucking for several days before you set her, and then I would place my nest or nests in a quiet, cool place, where no other chickens can bother her, placing water and feed where she can have access to same at all times. In preparing the nest I would place a sod in bottom of same, with the grass side down; I then would place a little chaff on this, and then my straw. Have the same well shaped, so the eggs do not roll out from under her, and at the same time not so hollow as to allow the eggs to get piled on top of each other. I would dust the hen well with some good commercial lice powder, at the time of setting her, and on the tenth day, and then on about the twentieth day. You must bear in mind that for a hen to set three long weeks in the month of June is trying on her under the best of conditions, so cannot stand to be hatching and rearing lice and

chickens at the same time. At this writing we have just set twenty-eight hens, and they have all been set exactly as described. We do most of our hatching with incubators, but as we are, along with the rest, short of chicks we have to double up a little.

We will now take the chicks just hatched from either the hens or the incubator. We let them rest for about thirty-six hours in the nursery, or any place in the dark, so they are warm. For the next thirty-six hours we let them have access to nice clear white sand, and water that has been slightly warmed. We now have our chicks seventy-two hours old, and have not been fed any nourishment, which is not necessary, as they absorbed the yolk just before pipping. We now take and boil our eggs hard, take the shell off and mash good with a fork, and mix this with granulated cornmeal and clear white sand, using just as much as the moisture in the egg will take up. We give them what they will eat up clean of this for their first feed, and then we feed oatmeal, dry bread crumbs, and corn and wheat ground half and half, having it ground so that the wheat grains are cracked in two. We feed all this in chaff and make them work for it, with the exception of the egg, which we feed on a board every morning for about ten days. We give them plenty of green grass and a little cooked meat after the first few days.

We also provide plenty of shade for our chicks. We have always had the best results by making them work for the most of their feed for the first two weeks or so, and after they are out on range you can place their feed in hoppers without much danger, but you'll find no hoppers full of feed setting around in front of our day-old chicks, as the doctors tell us there is really such a thing as starving with a full stomach.

We raise quite a number of our late hatched bred-to-lay Barred Rocks each year with the above method.

Before I ring off, I want to give you three warnings:

Be sure your eggs are from good stock.

Fight the lice before they come.

Don't be in a hurry about feeding the chicks.

KEEP DOWN THE LICE.

With the coming of warm weather comes the poultry-man's worst enemy—lice. As all experienced poultry breeders know, it is utterly impossible to successfully raise poultry where there is lice, and that it is much easier to keep down the lice than it is to get rid of them, when once they have taken possession of the poultry house or brood coops. To keep down the lice a continual warfare must be kept up against them.

Eternal vigilance is the price of success in this as well as in any other branch of the poultry business.

As soon as the first warm days approach it is a good plan to give the poultry house a thorough cleaning, after which a good thick coat of whitewash, to which kerosene or carbolic acid has been added, may be applied. The nests, roosts and dropping boards should be so arranged that they may be easily removed and taken outside the building for thorough cleaning. They may be cleaned very effectively with boiling hot soap suds. The inside of the building should be entirely freed from dust and cobwebs which have accumulated during the winter months, and then the whitewash may be applied. Great care should be taken to saturate every crack and crevice where lice are apt to be hid. The nest boxes should be supplied with new nest material, and the floors with fresh, clean litter. With the dropping boards cleaned daily and the roosts and dropping boards sprayed or painted each week with kerosene or some good lice paint there will be little, if any, trouble from lice and mites in the poultry house during the summer months.

If hens are used for hatching the chicks it is of great importance that they have a room for sitting where the laying hens cannot get near them. This room should be entirely free from lice as should also the boxes which are to be used for nests for the sitting hens. When the hen becomes broody she should be thoroughly dusted with some good insect powder and moved to this room. She should be dusted again in a week or ten days and then again a couple of days before the chicks are due. The sitting hens should also be provided with a dust bath, which may consist of fine road dust and coal ashes.

When the hen and chicks are taken from the nest the chicks should be examined for large head lice and whether there are any or not it is a good plan to anoint each chick's head with a drop of sweet oil.

The coop in which the hen and her brood are to be placed should have been previously thoroughly cleaned and the floor covered with fine chaff. Later in the season fine dirt

may be used in place of the chaff. It will absorb the moisture from the droppings and also act as a disinfectant. Again, in about ten days or two weeks, the chicks should be examined for head lice. Little chicks are seldom bothered with the small gray body lice which are found on older fowls. The large long lice are found on top and on the back of the chick's head and sometimes under the throat. After two or three applications of sweet oil of from a week to ten days apart these lice seldom appear again. Often-times not more than one application is necessary.

The coop should be thoroughly cleaned twice each week and should be sprayed weekly.

While the hen continues to brood the chicks she should be dusted with some good insect powder occasionally. If the hen and her brood are furnished a dust bath they will do much toward keeping themselves free from lice. As the chicks grow older we must watch for the body lice. These lice do not stay on the chicks in the day time, but hide in the cracks of the coop, and will multiply very fast unless they are destroyed. At night the lice leave their hiding place and suck the vitality from the chicks, which process repeated each night leaves our chicks in a weakened state and they will not grow and develop into healthy, mature chickens.

Cora A. Cleveland.

Geneseo, N. Y.

REGISTERED CHICKENS.

What is meant by the word "register"? Webster says, "keeping of a record." Don't we breeders of layers keep a record? Have we registered chickens? No. Why not? Because if we did just look how many there would be and the term "registered stock" would be as common as the word "strain." Oftentimes as we read over the advertising columns of our leading poultry papers we note "200-egg strain," or "250-egg strain." Then, reading a little further down, we read in this same advertisement "500 or 600 choice breeding stock for sale cheap." Then we as American people jump at the idea and expect to get all 200-eggsters of this advertiser, which seems as though our money is made; when we do a little figuring with our pencil and paper, it will be but a short time until we will be a U. R. Fishel or E. B. Thompson or Duston and some more of the great, successful breeders. Then, while we figure, if only a little common sense were mixed in, think, did not those men work from fifteen to twenty-five or thirty years before they got winners in our leading shows, and good layers, and did they get a "swell head" when they began to reap from their hard and long experience of hard work? No. They soon saw where they could make improvements yet, and today see what we have at our leading shows. You see what we have, birds of beauty, snow-white, true bars or whatever breed they may be, that seem perfect in all points. You see what nature and skill have done. Such birds are scarce and will never be plentiful, and such as 500 or 600 that averaged 200 or 250 eggs per year. Those men who advertise them may have a few, but they are not going to part with them unless they are too old for breeders, and such birds are about as scarce as hen's teeth, and those advertisers are the ones who have caused the word "strain" to fall from a glorious height to a low depth, that will never be regained. Then why not have registered stock? Let me explain what I mean. First we can divide them into two classes, registered and advance registered; registered from 200 to 250, an advance, from 250 up. Of course, these can be governed by the breed, as a Leghorn will lay more than a Plymouth Rock. Next question is, how are we to know that, or when we have such stock? If the former advertiser does not tell the truth, and would he not do the same with another stock? Have a system of numbering stock, form an association, elect officers as the other clubs and associations do, and to be a member of it he or she must abide by the law of registering stock, which should be printed on his membership receipt. If he does not do this he should be fined or thrown out of the club and a notice published in every poultry paper.

By the use of trap nests and leg bands, I see no reason for not making it a success.

For registering show birds, all birds from 90 to 94 points to be registered, and from 94 up to be advance registered. There would not be any trouble in this class, as they could get the judges' receipt and send it along with their application for their number.

I have looked the poultry papers over and never been able to find anything on this subject. It may have been tried; I do not know. But I do believe that if put into some one's hands who does that kind of business it could be worked successfully.

Why can't we poultry crauks have our stock as good as

that of a dairy breeder, and why can't we boast of advance or registered ones? Why can't we build up a stock of registered ones that will pay us 50 per cent or even 100 per cent better than our hens offered for market now, and have a majority of good birds that we will be proud of, and not send them to market as dressed or live birds?

Some will say: "Oh, that is too much work. We can get a good price now and our other stock is about one-half less trouble." That may be true; but the people of America, as well as other countries, are going to wake up some day. Then where will be the man who is afraid of a little extra work? As it has been said: "You may fool some of the people all of the time and all of the people some of the time, but you can't fool all of the people all of the time." Then why not start registered stock so that people who buy will know what to buy and make a better price for the registered poultry man than the one afraid of extra work?

G. A. Neff.

Greensboro, Pa.

FOR NEW BEGINNERS.

As it is now time to be setting hens and starting incubators, I would like to say a few words for the benefit of those who have taken the chicken fever this spring and who have small means to commence with also. I think the cheapest way is to buy a few mongrel hens to act as mothers and then buy eggs to set, choosing your favorite breed. Buy eggs as near home as possible from some reliable dealer in full-blooded poultry, as the eggs then get less handling. Out of six settings of eggs of fifteen each I can say that one can count on fifty-five chickens and should raise at least three dozen of them. I can say from actual experience that from setting eggs from April 1 until June 15 I never fell that low. If you are a genuine new beginner I would advise you to set your hens in April and May, as one can raise the little chickens easier—they seem to be harder. If you get eggs of good, full-blooded stock, in the fall you should sell the cockerels for enough to pay for the eggs you bought, besides having the pullets left to pay for your feed and care. Now, as to coops. I use nothing but boxes—all sizes—and one can generally get them for nothing. Sometimes, though, if I want an extra large one I buy it. Then I buy a few yards of screen wire, knock out the end of the box, tack the screen wire over the upper half, putting a slat across where the wire comes to. Turn the box over, bottom side up; find a board that fits perfectly tight across the lower end where there is no wire, which serves as a door. At night after the chickens go in the coop I put up the board and place a rock against it, and if you have the box setting on a level floor of boards you have a coop vermin-proof, and you always know how many chickens you have got. One must have plenty of coops so the chickens as they grow can be divided so they will not be crowded. I forgot to say that I take two slats and nail one end of each on both sides of the box at the top of the wire, slant them down, then fasten a thin board on the slats wide enough to prevent rain from blowing in. If the bottoms of the boxes have cracks in them wide enough to admit rain, tack slats on them or old oilcloth. If it is possible, set two or three Biddies at once, give all the babies to one mother and set the hens over again, giving them plenty of feed and water, and if they are free of lice it won't hurt them. If you give the little chickens to the hen be sure she is not lousy. I always grease the little chickens' heads and under their wings with pure lard when they are four or five days old, and keep the mother hen powdered well with some good louse killer. If you do this you will seldom be bothered with lice. I will also give a cure for the gapes which I have never known to fail. Take two horse hairs out of the tail, as they are the longest. Place both hairs together and then double them. Mash the doubled end as flat as you can. Open the chick's mouth, holding down the tongue, and insert the double end in the windpipe. Push down just as far as you can, twist the hairs around a few times, then pull the hairs out and see the gape worms. Do this three or four times. Put Mr. Chick down, give him something to eat, and note results. In conclusion, will say: Subscribe for and read all the poultry papers you can, but if you take but one be sure it is the good old "American Poultry Journal." For, while there are lots of other good ones, none can come quite up to it, for the beginner especially. Respectfully,

Mrs. Maude Stoneking.

Avon, Ill.

The cockerels and pullets should be separated as soon as the sex can be distinguished. This will give the pullets a better chance to develop.

Shade should be provided for both the old and young stock.

THE NATURAL ENEMIES OF POULTRY.

Now that spring is coming and hatching time is near, it is necessary to watch for the many animals that prey on the young chicks which you have raised so far successfully and had hoped would prove a good investment on the money and trouble expended.

Perhaps the worst enemy is the weasel, who sometimes destroys a whole brooder of chicks or a whole brood under the hen by simply biting them in the back of the neck and leaving them to die. The weasel is long and slim, has a long tail, short legs, very long neck and a snake-shaped head with a very strong lower jaw. He is generally brown on the back and head and white or gray on the belly, although they are sometimes all white.

He is very bold and fearless, often taking chicks in broad daylight, with people nearby, very seldom making a noise in his deadly work unless he misses his strike and the chicks squeak before they die.

The weasel travels up brooks and small streams where he is sure to find rats and mice in sufficient number to satisfy his appetite, but when chickens are around he leaves his other haunts to get to them, no matter how great the difficulties or how small a hole he has to crawl through. Indeed, they can get through smaller wire better than inch mesh.

He may be caught in steel traps or may get shot with a rifle as he stands very still when watching anything. An acquaintance of mine caught twelve in steel traps this season, ten brown and two white.

Another enemy is the cat. There are two kinds of cats—your cat and your neighbor's cat. If it is yours it is almost sure to be a good cat, and you hate to kill it; so if a way to cure them is shown perhaps you will not have to kill it. Catch the cat, put it in a stout bag with just its head out, and tie firmly around its neck the bag, with the most of the cat inside. Then take it to the poultry yard, place it in front of a hen with chickens and watch the results. If it is a good hen kitty will behave thoroughly. If the cat is your neighbor's cat, kill it and say nothing about it. Among the pests of the poultry perhaps the worst are: The skunk, very fond of eggs—be careful how you handle them; rats, which take eggs and young chicks; hawks, capable of doing considerable damage; last of all and not least, chicken thieves, who are dangerous to your poultry.

All these may be guarded against with a little care and trouble so that they will not prove entirely enemies to the poultry.

Before leaving the yards at night see that the outdoor brooders are closed up and the chicks comfortable; that the hens with chicks are in a safe place; that all the buildings are locked, and you will be practically safe from all enemies.

Bertram Moody.

Thompsonville, Conn.

MARKETING EGGS.

It takes a great many eggs even when eggs are selling at their winter prices to bring the poulterer a generous profit, because it costs so much to give his hens and pullets the variety necessary to produce a number of eggs; and they must be well fed, busy and contented to respond at all to his treatment. Even then the eggs, if sold to a commission merchant at the wholesale market rate bring in but a small margin of profit when freightage, crateage and commission have been deducted.

My advice is, don't sell to the commission man at all if you can possibly avoid it; if you can't sell directly to the consumer, then sell to a party who can sell direct to the consumer, thus saving all commission and adding possibly five or ten cents per dozen to your receipts through the class of people you are catering to and the manner in which you present your produce for sale.

If you can take your eggs to market personally or can get a careful carter to take them for you, instead of shipping by freight or express, don't crate them at all. Provide yourself with folding cardboard boxes that are partitioned to hold one dozen eggs each. These can be bought for 80 cents per hundred, and but four-fifths of a cent is added to the marketing cost of each dozen packed in them. They are strong and secure when properly folded and fastened together, and if bought by the thousand the manufacturer will neatly print your business card upon them.

Also provide yourself with an adjustable rubber dating stamp which can be bought of any stationer for 26 cents.

When you gather your eggs bring them into the house, select the smaller ones for home use and with indelible ink carefully stamp upon the rounded end of each market egg the date when laid.

Put one dozen in each carton with dated end up—that date will add 50 per cent to the flavor of the egg when it is served, boiled, at the consumer's breakfast table a morning or two later.

Don't fail to impress upon the consumer the quality of that which he is receiving. By way of emphasis it might be well to also enclose a neatly printed card guaranteeing every egg to be as represented. Use white wrapping paper only and use attractive cord to complete the package. After through wrapping, label the outside, "Fresh Laid Eggs—Handle Carefully."

If you are near enough to market to go yourself or can send a boy with them, write to a few people whom you know pay a good price for good articles. Describe briefly what you are offering, and ask them to dry a dozen; or else try to create a demand from the invalids and sick of your market community—they need fresh eggs daily, and trade among them can be worked up through physicians or by placing an advertisement directed to them in a medium whose circulation is purely local. Hotels, apartment houses, first-class

BUFF COCHON MALE.

Bred and owned by H. N. Hanchett, Jackson, Mich.

restaurants and soda fountains are also eager for your product.

If you cannot market your produce personally at least go to town once and take a sample package with you. Call upon a grocer or two whose fine trade you think you can supply, and show him how it will be to his advantage to handle them for you.

Eggs so arranged for market would be quite appropriate for a gift from one friend to another at Easter. Maybe, too, at that season of the year it would pay you to dye some of them attractively—they would appeal to your customers for their children.

Whatever way you market them, have just enough originality about your method to make people attentive and bring you something in excess of the ordinary prices you would otherwise receive. By following these ideas you can make a dozen of eggs as attractive as an 80-cent box of confections, and the party who pays you 45 or 50 cents for them will be getting a bargain in these days of cold storage and the preservation of last year's eggs.

William H. Roper.

Ateo, N. J.

No time like the present to give your chicken houses a thorough cleaning and a good coat of whitewash.

In order to promote constant growth the chicks should be fed regularly.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers, Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

55,000 A. P. J.'s for June, 1907.

State of Illinois, County of Cook, ss.

J. G. Budde, secretary and treasurer of Regan Printing House, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding fifty-five thousand copies of the June, 1907, issue.

J. G. BUDDÉ.

Subscribed and sworn to before me this 21st day of May, 1907.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

With each subscriber to our publication we positively guarantee, while his subscription lasts, that no advertisement is allowed in our columns unless we believe that any subscriber can safely do business with the advertiser, and we agree to make good any loss which any such subscriber may sustain by trusting any such advertiser who may prove to be a deliberate swindler; but we do not undertake to adjust trifling differences between subscribers and responsible advertisers. To take advantage of this guarantee, written complaint must be made to the publisher within two weeks from the date of any unsatisfactory transaction, with proofs of the swindle and loss, and within two months from the date when the advertisement appeared, and the subscriber must prove that in writing to the advertiser he said, "I saw your advertisement in the American Poultry Journal."

Our Change of Location.

Owing to the steady growth of the American Poultry Journal and the inadequate facilities and space, we have removed from our old location, 325 Dearborn street, where we have been for nearly 14 years, to larger and better quarters, corner of South Clinton and Monroe streets, and our address now is 103-113 South Clinton street. A hearty invitation is extended to all our friends to call on us when in Chicago. We have in preparation a fully illustrated description of our new building and offices which we will soon publish in American Poultry Journal.

Canadian Subscriptions.

Owing to a recent arrangement between Canadian and United States governments, and by a ruling of the post-office department, the postage on pub-

lications sent across the line is raised. All Canadian subscriptions to American Poultry Journal in the future will be \$1.00 per year, postage prepaid.

American Poultry Association Election.

Mr. Fred L. Kimmey, election commissioner, has officially issued the following bulletin of the result of the American Poultry Association election:

Report of the officers elected as shown on the face of the returns:

C. M. Bryant was elected president.

H. V. Crawford was elected first vice-president.

Miller Purvis was elected second vice-president.

Ross C. H. Hallock was elected secretary-treasurer.

Grant M. Curtis, Theo. Hewes and Wm. McNeal were elected members of the executive board for three-year term.

D. A. Nichols, S. T. Campbell and Geo. D. Holden were elected members of the executive board for two-year term.

T. F. McGrew, Reese V. Hicks and Geo. S. Barnes were elected members of the executive board for one-year term.

Niagara Falls was chosen as place of annual meeting for the next three years.

Second week in August was chosen at time of annual meeting of 1907.

At said election:

For president:

	Votes.
C. M. Bryant received.....	390
H. V. Crawford.....	141

For first vice-president:

H. B. Donovan received.....	196
Theo. Hewes.....	174
Jas. A. Tucker.....	123
T. E. Orr.....	9
H. V. Crawford.....	6

For second vice-president:

Miller Purvis received.....	499
O. L. McCord.....	7

For secretary-treasurer:

Ross C. H. Hallock received.....	323
W. S. Russell.....	164
Geo. H. Burgott.....	52

For executive board, three-year term:

Grant M. Curtis received.....	473
Theo. Hewes.....	274
Wm. McNeal.....	279
Henry Steinmesch.....	108
Geo. D. Holden.....	109
H. V. Crawford.....	96
G. R. Haswell.....	73

For executive board, two-year term:

D. A. Nichols received.....	267
Geo. D. Holden.....	297
S. T. Campbell.....	238
Elmer Dixon.....	215
H. V. Crawford.....	194
Henry Berran.....	83

For executive board, one-year term:

T. F. McGrew received.....	449
Reese V. Hicks.....	388
Geo. S. Barnes.....	254
Henry Steinmesch.....	196

Place of annual meeting:

Niagara Falls received.....	204
Cleveland.....	163

Time of meeting, second week in August, received 154 votes.

Note.—There were many scattering votes. The constitution provides: "Neither the vice-presidents nor any two of the nine elected members of the executive board shall be elected from the same state or province." H. B. Donovan and Wm. McNeal are both from the province of Ontario. Theo. Hewes and Geo. D. Holden are both from the state of Indiana. Jas. A. Tucker and Geo. S.

Barnes are both from the state of Michigan. T. E. Orr was deceased at the time of the election. Inasmuch as Donovan, Hewes and Tucker were ineligible on account of residence the election commissioner is forced to report the election of Mr. H. V. Crawford, of New Jersey, as first vice-president.

Fred L. Kimmey,
Election Commissioner.

Upon the whole the gentlemen chosen to fill the various offices are representative men, who have well earned the recognition given them by faithful work in the interest of the association for many years. All sections of the country, excepting the Pacific coast, are represented either on the official board or in other offices. This condition of affairs is due to the fact that the west coast fanciers divided their forces by placing two candidates in the field.

The American Poultry Association is now upon a representative basis, officered by competent men. There is much to be done, and the American Poultry Journal believes that the association is to go on to better and larger things and to serve well the great industry for which it stands.

The August Meeting.

President Curtis is calling for suggestions as to the best program to be arranged for the American Poultry Association meeting at Niagara Falls in August. In a letter to members he makes these suggestions, at the same time asking all those interested to aid in this work:

No doubt you will recollect that the new constitution of the association sets forth that the Executive Board shall "provide for an annual poultry institute, to be held in conjunction with the annual meeting of the association." Something was said at the Auburn convention of the association last January about holding a poultry institute in conjunction with our next annual meeting, to be held in August, but the suggestion was not urged, owing to the fact that there will be a good deal of important business to transact at this first meeting held under the new constitution. Writer took this view of the matter at that time. Am now convinced, on the other hand, that we ought to make a start in the right direction by preparing an interesting two-session or three-session institute program to be held during the daytime or evening (evening preferred) in conjunction with the annual convention work of the association. What is your opinion? If you concur in our view kindly send me your valued suggestions, by early mail, and assurance of your hearty co-operation.

I haven't given the subject much thought but four or five "good features" have occurred to me as follows:

Debate to be participated in by two members for the affirmative side and two for the negative, followed by brief general discussion. Subject: "Resolved, That the next edition of the American Standard of Perfection should contain color-plate illustrations of ideal fowls, male and female."

Chalk talk by Franklane L. Sewell, poultry artist, suggesting and explaining improvements and additions that he believes should be made to the illustrations of the revised edition of the

American Standard of Perfection that is to go into force July 1, 1910.

Address by James E. Rice, Ithaca, N. Y., Assistant Professor of Poultry Husbandry at the New York State Agricultural College; illustrated by lantern slides, showing and explaining the practical work being done at agricultural colleges and on experiment stations in the United States.

Debate to be participated in by two members for the affirmative side and two for the negative, followed by brief general discussion. Subject: "Resolved, That the American Standard of Perfection gives undue prominence to the beauty value of standard-bred fowls to the detriment of the utility value of domestic poultry."

Address by W. R. Graham, manager of Poultry Department of the Ontario Agricultural College, Guelph, Ontario, illustrated by lantern slides, showing and explaining what the general and provincial government of Canada are doing in the behalf of poultry culture.

Address or paper by Robt. R. Slocum, poultry assistant, United States Department of Agriculture, Bureau of Animal Industry, Washington, D. C., telling what the United States Government has done, is doing and has planned to do for the benefit of the poultry industry.

Size and Weight.

T. F. McGrew, in *The Feather*, touches upon a matter of vital importance. He says:

"Size, shape and color should be the rule. We think that weight should not represent size. We believe that size should be so prominent in the general make-up of the bird as to make it unnecessary to use scales to establish size."

Under the prevailing rule of weight representing size, in the consideration of fowls in the show room a great injustice to exhibitors and to several breeds and varieties of fowls is the common practice. Size, not weight, should be the desired quality in a fowl, whether in the show room or breeding pen. In fact at any time except when the fowl is placed upon the market block. In score card shows it is a rule having few if any exceptions that the over-fat specimen wins over one of desired size. This is wrong, all wrong. It is the easiest thing in the world to take a small fowl and fatten it to the limit and thus bring it up to or exceed standard weight. Such a fowl is absolutely worthless as a breeder and should be promptly set aside and cut of any winning by the officiating judge. To seek to perpetuate and improve a breed of fowls by the use of such a specimen would be folly.

This is a very important matter and one which will be taken up by the American Poultry Association when consideration of the overweight clause, as proposed by W. S. Russell, is arrived at. It is a subject worthy the best thought and careful consideration of all fanciers.

"Mr. Jingle," of Poultry, London, has brought Columella from his grave in Rome and is showing the old fancier the poultry sights of England. "Mr. Jingle" in wit and sarcasm has frequently shown the folly of the so-called laying contests, and thus uses the dead Roman to do it again: "By the way,

do you go in for laying competitions in Rome?" asked the honorable secretary of the Utility Poultry Club. "We did once," replied Mr. Columella, "but it wasn't a great success. The public didn't take to it, so it was never repeated. You see the Roman public want an entertainment that's either spectacular or melodramatic; they've no use for anything else. And from the fancier's point of view the laying test was spoiled by competition being thrown open to all. The consequence was that the competitors were rather a mixed lot. Messrs. Antony and Cleopatra's pen of 1875-egg strain imported alligators won first prize, and beyond being a bit soft in the shell their eggs were very fine. Mr. Valerius Maximus's pen of tame trout laid the most eggs, but they were small and they lost on points. Third prize went to Messrs. Castor and Pollux's pen of line-bred silkworms. The fowls had no chance whatever. Of course, there was a lot of correspondence in the fancy papers, and the laying competition subcommittee were fed to the lions to appease the public wrath."

J. H. Drevenstedt in the American Stock Keeper outlines one practical proposition for the state branches of the American Poultry Association to take hold of. He says: "Now that the American Poultry Association intends to broaden its field and try and do something for the practical end of the poultry business, it might begin by doing some missionary work in remedying the evils in connection with cold storage fowls. The state branches of the A. P. A., if they really get to such a point as to meet and resolve to do something of value to the poultry interests, could influence legislation to a considerable extent and be instrumental in having laws passed that will put a stop to the sale of tainted poultry."

We warned Brother Schuerman, of Commercial Poultry, that in his effort to decide who is the most popular southern judge he would get but one result—trouble. It has come. Brother McReynolds, the fire-eating, fur-flying editor of Texas, calls Brother Schuerman a "meddling idiot." Brother Schuerman comes back and tells Brother McReynolds that he is a "skulking coward." Meanwhile the southern judges, like the northern judges who have had no kind-hearted but mistaken editor to decide their public standing, are hewing out their own destiny.

Secretary Crawford announces that the Madison Square Garden show will be held December 17-21. The change in dates was unavoidable, the Garden management having the controlling voice in the matter. If Philadelphia will come in now between New York and Boston shows with Scranton, Pa., already in, the arrangement would be one to the pleasing of a host of fanciers.

After two thousand or more years of uncertainty the great question has been settled by Brother Rankin, of Poultry Culture. He says man "sets" a hen and the hen "sits."

We do hope that when Theo. Hewes gets off the train or boat at Niagara Falls in August he will not fall into the hands of confidence men or pickpockets or the like. Theo. was much worried

about the safety of the members, you know, and during the election period urged that as a matter of safety we all vote against the wicked place. We shall see that Theo. is protected.

* * *

We knew it would come, sooner or later. A New England Rhode Island Red breeder says he has produced some "remarkably fine" Columbian Wyandottes by the Silver Wyandotte—R. C. R. I. Red cross. When those Rhode Island Red fellows do not get their breed in on a winning proposition it's a cold, very cold day.

* * *

Fanciers will receive with genuine pleasure the news that they are again afforded the privilege of a weekly reading of J. H. Drevenstedt's "Notes In Passing." The American Stock Keeper, Boston, has engaged Mr. Drevenstedt to handle a page in that always interesting publication.

* * *

Mr. Bryant is a good man and an able man, but he will have to be mighty busy every day for the coming year to do the practical good for the American Poultry Association that his predecessor, Grant M. Curtis, gave during his term of office.

* * *

To the newly-elected officers of the American Poultry Association: It's a condition, not a theory, which confronts you. Do your best. Here is our hand and help.

Facts and Fancies.

Written for A. P. J. by D. Lincoln Orr.

There is nothing that adds to success like courage. Be courageous and happy, as some one once wrote: "Be your own best friend by being at all times and under all conditions cheerful. It is better to be a cheerful idiot than a pessimistic philosopher." The courageous man secures and holds a responsible position even though he may have serious misgivings of his ability to make good; the timid man does not dare and rots in the old rut. There is always a tomorrow for the fellow with red blood in his heart, who believes in himself, who faces the world unafraid. As you have often heard, "The hero dies only once, but the coward dies a thousand times."

Keep a stiff upper lip:

It looks to me as if the incubator business was getting top heavy, so many new concerns bobbing up all around that it will soon be a question of "survival of the fittest." While I do not wish to butt in, I think some one should get wise and realize that the poor hen cannot support too many concerns nor either will these good times last forever. There is either a lot of money in the business or there will be a lot of sick men getting out later. Which?

Since writing the above I ran across the following and perhaps after all the American Hen can support all that is looking at her with longing eyes:

"Poets may sing of the glory of the eagle and artists may paint the beauties of birds of plumage, but the modest American Hen is entitled to a tribute for her industry, her usefulness and her productivity. The American hen can produce wealth equal to the capital

stock of all the banks of the New York Clearing House in three months and have a week to spare. In less than sixty days she can equal the total production of all the gold mines of the United States. The United States proudly boasts of its enormous production of pig iron, by far the greatest of any country in the world, and yet the American hen produces as much in six months as all the iron mines of the country produce in a year. In one year and ten months she could pay off the interest bearing debt of the United States."—Congressman Dawson, of Iowa, in the House.

If we had more such as Congressman Dawson at Washington we poultry men might get more than a handout. Just read his little speech over the second time and study it and I presume his figures are taken only from the market reports. That does not count the \$500 paid for a few birds now and then, either.

In the year 1896, during the Washington, D. C. poultry show and the annual A. P. A. meeting, by special consent on President Cleveland's part we were allowed to visit his "Royal Highness" and during a cabinet meeting business was suspended for a while to allow us to file past and shake hands with his "uobs." Mr. Geo. E. Howard stood by the side of the president and introduced us as we passed by the reviewing stand (?). I will never forget one man, Mr. R. P. Thompson, of Paterson, N. J., who was at that time getting along in years. When he was introduced he stood there for a few moments in admiration, then he said to

the president: "You are the first live president I ever saw." Mr. Cleveland, with a twinkle in his eye, asked him: "Well, how many dead ones have you seen?" The old man was taken by surprise and remarked: "Why-er-why, I never saw any."

I remember very well the A. P. A.

utes to look over the report of the secretary-treasurer! Five minutes!

No wonder a Bridge wanted to get a whack at the boodle.

Do any of you know Patrick Henry Jacobs? If you don't you have missed

meeting that was held at Washington that year. There were about thirty members present and "yours truly" was elected secretary-treasurer. That was my first real acquaintance with the late Mr. T. E. Orr, although I had met him several times before Mr. Bridge was my opponent. Just think of it, the auditing committee was given five min-

a lot and I am sorry that he does not attend any more. He made a great plea for a breed standard in addition to the regular standard and I am becoming convinced that it would be a great money maker and not hurt the regular standard very much. If the powers that be will only put their ears to the ground I think they will get wise

The "Pittsburgh Perfect" Electrically Welded Wire Fence

The weld of the 'Pittsburgh Perfect' Poultry and Garden Fence is the one point that makes it the strongest, longest lived fence in the world.

At every contact the wires are electrically welded—not soldered, brazed, wrapped, twisted, knotted or clamped, but welded by electricity. There is absolutely no give to the weld—solid as the wire itself. (A wrapped or twisted mesh is always an open joint—can't be made so tight it won't give some.)

The weld leaves the galvanizing perfect and intact—a complete covering and protection against moisture and rust. (Wrapping or twisting is apt to, and very often does, crack the galvanizing, exposing the wires to moisture and rust.)

The weld makes a smooth, solid fastening—no bumps, no projections. (In attempting to produce strength, a wrapped or twisted mesh is heavier and more bungle-some—adds unnecessary wire and weight—consequently increased and unnecessary cost.)

The "Pittsburgh Perfect" allows contraction and expansion in varying weather, and it always stands upright, firm and tight. No top or bottom board required. Adjusts perfectly to uneven ground. 25, 35, 46, 52 and 58 inches high.

Two weights: Top and bottom wires No. 10, others No. 13. Top and bottom No. 9, others No. 12.

Electrically Welded Fences for all purposes made by
Pittsburgh Steel Co.—Pittsburgh, Pa.
WRITE FOR BOOKLET & DEALER'S NAME

and issue a breed standard. In my opinion it's bound to come.

Wireless telegraphy was first introduced at the A. P. A. meeting at Boston in 1898. I was there. Will give a few impressions of the different meetings I have attended that to most members and breeders is ancient history.

I notice in an exchange, among other things, the following, in part:

"It seems but yesterday we were in the midst of the show season, struggling in the last round of the fight for the blue ribbon." (Now listen.) "Many of us took a back seat, but did so with the determination to go after the prize again next season." "Took a back seat." I repeat that part of it. I commenced to think (bad thing to do but I couldn't help it) and read and I looked over about every advertisement in that journal and for the life of me I could not find a breeder but what was comfortably and securely planted on the first seat and with bells on. "Best on earth." "Has more finish than all others combined." "The most coveted prize won by my birds," etc., etc., etc. And by the great gods of Chatham street I could not find any one on the back seat and from the accumulation of dust thereon no one ever was there. Funny, wasn't it?

I have before me the advertisement of a prominent breeder who claims his birds to be winners at such and such shows the past season. On looking at the catalogue he had no birds entered in his own name at one show. At the other show he had a few but had won nothing; he should have been on the back seat, but according to his advertisement he had the first row in the balcony.

I met a fellow at the New York show last January. He was full to the neck of enthusiasm. He came up to me: "Say, Link, I have the whole Columbians beaten to a standstill." I asked to see his birds. He remarked that he did not show this year, but he had a cockerel and pullet that were far and away ahead of anything in the garden. That kind of fellows give me an awful pain; always have better birds at home. The only way to see how fast your horse is: Put him in a race, then you will find out. Don't keep good birds at home, then blow about them. Either put up or shut up. You have all met the man with the good birds at home.

One of the 57 varieties—Black Plymouth Rocks.

If all this talk about inside track and "first aid to the injured" talk is true that is floating this way, it behooves the A. P. A. to appoint a commission to investigate the rumors and give it the usual coat of whitewash, aber nit!

Another of the 57—Rhode Island Whites.

If I really had thought that there was a candidate of means who wanted the secretary's job so badly, as it seems to appear, I'd loan him my note on probation, but then I did not know.

Mr. Bryant will have to decide "twixt love and duty" as president of

Send 2-cent stamp for large catalog and circulars.

T. F. POTTER & CO., Box A, Downers Grove, Ill.

the A. P. A., and how about the Red Club publishing the standard?

Oh! for a Jacobs or a Braden, clear cut and irradiate. These men were always looking forward, but as years pass by the statesmen are forced to give way to the politicians.

Another of the 57—Columbian Plymouth Rocks.

One of the happiest hours I ever had in my poultry life was a visit a few weeks ago with Mr. Lester Tomkins, Concord, Mass., one of the "famous 14." I was so taken with the Rose Combed Reds that I ordered a pen of good ones. I wish you could see his bunch. After a good cup of chocolate and pie (we call it cake here in York state) I was compelled to leave, but I had a blamed good time while it lasted.

Regardless of what others may think or say I believe the best show birds are bred and raised by many a little fellow unheard of. There is no tut tut about it. I believe it is a fact. I saw a bird sold recently for a fiver that some of the prominent fellows would have the tag on. Bred and owned by me (?). Regardless, if they owned this bird it would take 10 fives. That's all right, but these little fellows do raise good birds.

The 57 all in one. Buckeye Reds, eh?

"It takes a strong man to beat a track, but any old woman can follow."

The A. P. A. should amend its by-laws so the voting shall be secret and swear the election commissioners. This peddling names around the country as "they voted for me" is disgusting and some of the names ought not to be there, so I'm told.

I am so disgusted with the method of electing the officers that I am about ready to throw up both hands and surrender. To me it seems like a roaring farce and the more I think about it the more disgusted I get. Some are running for nearly every office on the calendar. But then I suppose this is

MAX GUCKEL,
President St. Louis Poultry and Pet Stock
Association and proprietor Woodlawn Poul-
try Farm, Kirkwood, Mo.

"higher education" or whatever you call it.

No person should be allowed to run for more than one office. It seems to be a case of "after the ball." Thank the Lord I landed somewhere.

The money end of the poultry business is eggs and meat, but no one can deny the fact the fancier can produce more eggs and meat than the farmer with mongrels. I am surprised so many farmers insist on the 57 varieties in one yard. I am glad to notice a few articles lately where people have done better with the standard-bred stock than from mongrels, even only for market purposes.

It's poor business advertising another's strain. Don't do it; just advertise one of the "57" with your own name, that's all. State your winnings and stand on your own pedestal. The other fellow is getting the benefit of your printer's ink. "Blinkety Blink's strain of goose eggs." Sand your rails, my dear breeder, your wheels are slipping. Get in the game on your own account and let the other have no more pipe dreams on your coin.

Just come right out bold and say Brown, Red, Whites, winners of 5th cock, nothing on hen (2 shown), 1st on ekl., 4th on pullet and 6th on pen, at Greenville show. It's no one's business where you got them first as long as you have the goods and have proven that you can win at shows year after year.

Just put a tag on your own make, unless you did buy them; then keep mum, and try to make good next year.

In the meantime don't forget to give the young chicks plenty of good fresh water, plenty of shade, plenty of fresh air in coops at night, plenty of room and plenty of housecleaning. Look out for mice and incidentally some good feed will not go amiss. Look out for lice; look sharp on the back of their head. A piece of lard, size of a pea, rubbed in is a good thing.

(From Poultry Yards of W. K. Vanderbilt, Jr.)

Bradley Bros.,

Gentlemen:—I want to tell you how well pleased we are with the stock from eggs you sent us last spring. From the 20 eggs I raised seven cockerels and seven pullets, and every one of them is a good bird. Three of the cockerels are extra good; I have been offered \$25 for one or them.

We bought 16 settings of eggs from four of the large-t Barred Rock breeders, but didn't get one bird out of the whole lot as good as several we have from your eggs. Very truly yours,

1907 A. E. Wright, Mgr. Deepdale Poultry Farm, Gt. Neck, L.I. N. Y.

Yours of 16th at hand and in reply would say, from your eggs I got 1st, 2d, 3d cock-rel, scoring 93, 92 1/2, 92; 1st pullet, 95 1/2; 1st pen, cockerel 91, pullets 95, 94 1/2, 94 1/2, 94 by Judge May. Mr. May said that the 1st pullet was one of the best colored birds he ever handled. I thank you for your fair treatment and believe you gave me the best you had, as you advertised. If this is of any use to you, you are at liberty to use it in any way you want.

1907 Geo. Booth, 10 Murry St., Barre, Vt.

Shows, Associations and Clubs.

The Latest News of the Show Room—Announcements of Special and Regular Meetings of Associations and Specialty Clubs—Secretaries are Requested to Send in the Latest News.

WASHINGTON COURTHOUSE, OHIO.

Ohio will have a state poultry show next winter. This will be good news to a large number of Ohio poultrymen as well as breeders in adjoining states.

The Ohio State Poultry and Corn Show was organized in February last and it was arranged to hold the annual exhibition at Washington Courthouse, Ohio, January 7, 8, 9, 10 and 11, 1908.

Following are the officers of the association: President, M. M. Barger, Mount Gilead, Ohio; first vice-president, G. M. Eichelbarger, Jeffersonville, Ohio; secretary, J. A. Bush, Washington Courthouse, Ohio; treasurer, Charles R. Dalbey, Washington Courthouse, Ohio; judges, Charles McClave, New London, Ohio; Ira Keller, Prospect, Ohio; Charles R. Dalbey, Washington Courthouse, Ohio; M. M. Barger, Mount Gilead, Ohio, and others.

The executive committee will be composed of twenty prominent poultrymen from various parts of the state to be announced later.

Secretary Bush has been hustling since the organization of the association to make the coming exhibition a success, and enough is already known to justify the statement that next winter's state show will be one of the best, if not the best, ever held in Ohio. A score card from this show will mean something to the exhibitor and every

poultryman of Ohio and neighboring states who can possibly do so should arrange to either make an exhibit or attend the show. Poultrymen are requested to correspond with the secretary on matters pertaining to the show, and all inquiries will be promptly and cheerfully answered.

Always one of the most interesting and important features of a poultry show to the average exhibitor is the matter of premiums. It can be stated in advance that there will be hundreds of dollars worth of cash and valuable special premiums to be gathered in by the successful exhibitors at the coming state show. A glance at the premium list, which will be ready for distribution about November 20, 1907, will make the mouth of the poultry exhibitor water, and we suggest that exhibitors now begin to prepare along breeding lines for the big show. It can be said that all promises of the Ohio Poultry Association will be absolutely carried out to the letter. The character of the men at the head of the enterprise is sufficient guarantee that it will be honestly and successfully conducted.

In connection with the poultry show the Ohio annual state corn show will be held in the same large pavilion at the same time. While both the poultry and corn shows are under one general management, the two will be conducted, in a sense, separately, by recognized experts

in their respective departments. One admission fee will admit to both. This plan has been very successfully tried.

Let the motto of Ohio poultry and corn exhibitors for the remainder of the year 1907 be—

"Boom the Ohio Poultry and Corn Show!"

J. A. Bush, Secretary.

Washington Courthouse, Ohio.

WORCESTER, MASS.

The Worcester Poultry Association, incorporated, held a special meeting Thursday, May 9, to take action relative to changing our dates, which we have advertised for two months. It was the unanimous vote to hold to our dates, and we will hold our show in Mechanics' Hall, Worcester, Mass., December 19, 20 and 21, 1907. We do not wish to conflict with any association, yet the New York Association has seen fit to take the same dates. We have \$600 in the treasury and will pay our bills promptly and give good premiums. The Partridge Wyandotte Club will meet with us. We shall try to get other clubs.

C. A. Ballarader, Adv. Agt.

OWENSBORO, KY.

The Owensboro Fanciers' Association will hold its fourth annual show at Owensboro, Ky., December 2-7, 1907, with W. C. Pierce as judge. An active campaign will be carried on from now to the opening of the show to make this a greater success, if possible, than any of our previous efforts. We are proud of our record of three successful shows that have paid every dollar offered and can safely promise exhibitors that all premiums will be paid in full on the last day of the show. Our

Greatest Animal Food Known. 1 Mill, 1 Hen, 1 Day, 1 Egg. TRIAL OFFER, freight prepaid east Mississippi River. Endorsed by leading exper. stations and most prominent poultrymen. U. R. Fishel says: "Greatest egg producer I ever used." Send Postal to-day for folder and free sample. Agents wanted. Ask your dealer. Man'd only by THE BENT-CROSSIANT CO., 14 Main St., Antwerp, N. Y.

9th Annual Sale of

Breeders. For the want of room, we are forced to sell our breeding stock at reduced prices. We intended to abandon our annual sale of breeders when we built our large Brooder House. The facts of the matter are, that we now have our brooder house crowded, and chicks still coming on, the older ones must be moved out to make room for the younger ones. Therefore, we are forced to sell birds that we intended to keep. The opportunity is knocking at your door to get some of

THE WORLD'S BEST

Breeders as well as show specimens. Our winnings of the past have demonstrated our claim, not the winnings at one show where the class might have been small or of no quality, but at such shows as the great A. P. A. Show Cincinnati, Ohio, 1906, T. E. Orr, Judge, Indianapolis, Ind. 1906, F. L. Shaw and W. C. Pierce, Judge and Nashville, Tenn., 1906, F. J. Marshall, Judge. At these shows our birds were in competition with the best

WHITE WYANDOTTES

From the east, west, north and south. Our winning sheets will show you that our birds carried off 15 firsts, 10 seconds, 4 thirds. Send 10 cents in stamps for catalogue, the most elaborate Wyandotte catalogue of to-day, also annual sale circular and a picture of two of our winners in their natural colors.

J. C. FISHEL & SON, Box J. HOPE, IND.

Grasp the opportunity when it presents itself as it does here.

EVERY POINT A GOOD POINT

premium list will be ready by October 10, and we cordially invite exhibitors to send for list and show with us. Robert B. Hale, secretary.

CLEVELAND, OHIO.

The Cleveland Fanciers' Club will give their third annual show the week of January 27, 1908. F. L. Gruehl, secretary, 9902 Woodland avenue, Cleveland, Ohio.

DOWS, IOWA.

The Dows Poultry and Pet Stock Association was organized at Dows, Iowa, Saturday, May 18. Thirty-six members were enrolled Saturday and as many more will join before the charter is closed. Arrangements are completed for a big show the last week in January. D. E. Hale, judge. A fine list of specials has been pledged and a large entry is promised. The following officers were elected: Harry Kinghorn, president; Charles Hughes, vice-president; J. L. Lee, secretary and treasurer; H. Brown, superintendent.

EVANS CITY, PA.

The Evans City Poultry and Pet Stock Association will hold its first annual show December 17-21, 1907. Judge H. A. Emmel, Mars, Pa., will judge the show. The show will be held in the Firemen's Department Hall, the most commodious and well lighted hall in the city. This show promises to be one of the best and well governed shows held in western Pennsylvania. Send in your applications for premium list to the secretary, J. F. McFarland.

WALDRON, ARK.

The Scott County Pet Stock and Poultry Association will hold its second annual show November 18-20, 1907. Our first show was a great success and everybody was well pleased with it, but we will do everything we can to make this show better than the first. We have secured the services of C. A. Emry, of Carthage, Mo., as judge. J. F. Anderson, secretary, Box 223, Waldron, Ark.

BROOKVILLE, PA.

The Jefferson County Agricultural Society will hold its next poultry and dog show September 3-6, 1907. The show will be held in connection with its fair. Judge H. A. Emmel, Mars, Pa., has been secured to judge the poultry. Bench show of dogs, \$310.50 offered in premiums. Open to the world. For premium list address George W. Stewart, secretary.

PAXTON, ILL.

Ford County Poultry Association, Paxton, Ill. Second annual show, January 2-5, 1908. An up to date show in a large room with every convenience for the exhibition and visitors. The show that gives liberal cash premiums, gold specials, gold-lined silver cups, incubators, trap nests and many valuable specials. W. H. Surface, Sec'y.

FINDLAY, OHIO.

The Hancock County Fanciers' Association will hold its next annual show

CONGO NEVER LEAK ROOFING

It is so much more convincing to show a man how good Congo Roofing is than to tell him, that we arrange to give every inquirer a free sample. The sample proves things—it does not claim them. You can see it and feel it and cut it apart and test it. Some makers dislike to show a sample but we prefer to do it because Congo Roofing is more than we claim for it and people can't find that out till they see it. Send for a free sample if you need any roofing and give us a chance to demonstrate that Congo is durable, waterproof, frostproof, heatproof and troubleproof. Send today.

DALLEY & DOUGLAS THE BEST IN WHITE PLYMOUTH ROCKS

We will book orders for 50 settings of our best eggs this month at \$4 per setting of 15. These eggs are easily worth \$1 a piece, as they come from the finest and most prolific flock of White Rocks. If you want winning cockerels and pullets for the next season's shows, place your order this month. Our egg guarantee will more than please you. We have a few cockerels to spare at \$3, \$5 and \$10. If you are not satisfied when you receive them, return them at our expense and we will refund your money.

DALLEY & DOUGLAS, Box J, Flat Rock, Mich.

Darling Feeds

Eureka, Ill., Feb. 26, '07
I feel that I ought to drop you a line, and express my appreciation of your goods. I have used I guess all goods from all other houses that are considered to put out standard goods, but have yet to find anything to equal Darling's.
H. J. DARST.

Your 1907 Chick Crop

is the problem right now. After the first stages you want something to hurry the broods along, make the largest, the finest, and make them the quickest. Use a feed you know will make a showing.

Darling's Beef Meal is an excellent developer. It is made from fresh meat, bone and blood. Runs 45% to 55% protein, only 10% to 15% fat. It supplies the materials that make eggs, flesh, bone and feathers.

Darling's Forcing Food is the food used by large commercial poultrymen to make early broilers and roasters—the quickest means to the end. Made from sound, wholesome cereals. Price, \$2.00 per 100-lb. bag.

All goods cash with order, f. o. b. Chicago or New York. Prices: Darling's Chick Feed, \$2.50; Laying Food, \$2.00; Scratching Food, \$2.00; Beef Scraps, \$2.75; Oyster Shells, 60c; Mica Crystal Grit, 65c. Write for catalog of full line of foods and supplies.

DARLING & COMPANY, Box C, Long Island City, New York
Box C, Union Stock Yards, Chicago

Hurry Up the Chicks

Next winter's profits will be greater if you push your chicks to maturity two months ahead of your neighbors. It can be done with proper management. Dr. Hess Poultry Pan-a-ce-a makes digestion in the fowl or chick, a perfect operation. Thus the largest possible amount of the nutrition in the food is converted into bone, muscle, feathers, eggs, etc.

DR. HESS Poultry PAN-A-CE-A

is the prescription of Dr. Hess (M. D., D. V. S.) and is a scientific tonic—a guaranteed egg producer and sure remedy for gapes, cholera, roup, etc. Endorsed by leading poultry associations in United States and Canada, and sold on a positive guarantee. Costs but a penny a day for 30 fowls.

1-2 lbs. 25c., mail or express 40c.
5 lbs. 60c.
12 lbs. \$1.25.
25 lb. pall, \$2.50.

Except in Canada and extreme West and South.

Send 2c. for Dr. Hess 48-page Poultry Book, free.

DR. HESS & CLARK
Ashland, Ohio.
Instant Louse Killer Kills Lice.

PAGE Poultry Fence

Strongest, best on the market. Fences poultry in, stock out, and lasts. Costs less erected than common netting, because it requires no boards at top or bottom and so, few posts—one every 50 feet. You can't afford to buy poultry fence without investigating Page. Write for descriptions.

Page Woven Wire Fence Co.
Box 586, Adrian, Mich.

pleased to mail a copy to every Bantam breeder who will send his name and address.

S. C. BLACK ORPINGTON CLUB CATALOG.

The National S. C. Black Orpington Club has issued a 40-page catalog and wants every breeder of Black Orpingtons in the country to have a copy. Address Joe Coleman, Secretary, Belleville, Ohio.

A NEW POULTRY ASSOCIATION ORGANIZED IN ST. LOUIS.

In January a new poultry association was organized in St. Louis, which will be known as the St. Louis Poultry and Pet Stock Association. The object of this association will be to promote and encourage the breeding of thorough-

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Eggs for hatching from my regular matings, \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100. From exhibition matings, \$3 per 15, \$5 per 30. Illustrated circular free.

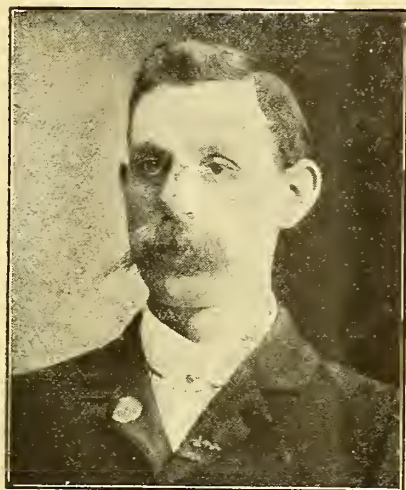

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906

H. J. BLANCHARD

Box 997, GROTON, N. Y.

bred poultry, pigeons, and all kinds of pet stock. Prizes will be offered at their annual shows for everything embraced in the above. This is something that has not been done in St. Louis for several years. This association has been organized on conservative lines, so as to prevent a one-man policy, the same having proved to be a failure in the past. The stock costs \$5 per share. The by-laws prevent any member from voting more than 5 shares. In doing this it will give everybody a show, one of the objects being to make it a democratic association where the man with only a few will be as welcome as the man with a large number. The following officers were elected for the ensuing year:

President, Max Guckel, Kirkwood, Mo.; first vice-president, Max Orthwein, St. Louis, Mo.; second vice-president, Judge W. W. Henderson, Bridgeton, Mo.; third vice-president, John F. Schroer, St. Louis, Mo.; fourth vice-president, V. C. Harwood, St. Louis, Mo.; fifth vice-president, J. Parkinson, St. Louis, Mo.; sixth vice-president, C. J. Sadler, St. Louis, Mo.; secretary and treasurer, T. W. Orcutt, St. Louis, Mo.;

E. B. BARNETT,
Proprietor of Oak Grove Poultry Farm.

sergeant-at-arms, Louis Vrana, St. Louis, Mo.

The meetings are well attended. Just as soon as it was known that a poultry association had been organized it was surprising the amount of interest that was displayed. Applications for membership began to come in and inquiries were received from poultry fanciers in several of the surrounding states. This only goes to show that if a poultry club is conducted on the right basis in St. Louis it will be a success from the start. The location of St. Louis is ideal for a poultry show. The surrounding country is large, the climate ideal, the poultry is good as can be found anywhere. The drawback has been that St. Louis did not have a first-class poultry show for the fanciers to come to. Letters are being received every day from all parts of the country asking for information. The incubator manufacturers have assured their hearty support, poultry supply and feed men are all delighted at the prospect of having a first-class show once more. In several instances financial assistance has been offered without being asked for. The membership embraces all the leading

fanciers in the poultry and pigeon world of St. Louis and vicinity. The varieties bred by the different members are varied and large. This will prove to be very beneficial in holding the show. It will prevent it from being a one-bird show. The prizes to be offered at the shows will be cash and special. The cash prizes will be guaranteed, and as large as the occasion will demand. Already several of the leading merchants have expressed their willingness to offer special prizes.

The classification will be large. It will embrace everything in the feathered world, also all kinds of pet stock. The association will be pleased to receive applications for membership from anyone interested in poultry, pigeons and pet stock. Anyone wishing to become a member from outside of the city may correspond with Mr. T. W. Orcutt, secretary, 4711 Page avenue, St. Louis, Mo.,

also anyone desiring any further information. Everybody exhibiting poultry, pigeons and pet stock is cordially invited to exhibit at the first show, which will be held about January. The headquarters of this association are located in the Missouri Athletic Club. The Missouri State Poultry Association is considering a proposition to hold the state poultry show in St. Louis in connection with the show of this association, Mr. Miller, the superintendent, being one of our most enthusiastic members. We also have the honor of having Mr. Ross C. H. Hallock, the secretary of the American Poultry Association, who is also favorably known as one of the judges at Madison Square Garden, as one of our members. The motto of this association will be honest and fair treatment, and the best bird wins.

WOMAN'S HOME DEPARTMENT.

Mabel Bates Williams, Editor.

This department will not be confined to poultry items entirely, but to all matters pertaining to household economics. We want every woman who reads American Poultry Journal to consider herself a member of this department. If you have a bit of practical knowledge in household matters, an item of experience in raising poultry that will be helpful to others; a favorite recipe, etc., send it along. This is your department, just as far as you are willing to make it.

All communications should be addressed to the Home Department of American Poultry Journal Publishing Company, 103-113 So. Clinton St., Chicago, Ill.

CONVENIENCE VERSUS APPEARANCE.

Did you ever stop to think how many steps a woman takes every day of her life, especially if she does her own housework, and still more if she takes care of a large flock of chickens? It is every woman's ambition to have a neat, cheery house, and many carry this idea to such an extent that the things which are used daily in the kitchen work are put away out of sight in the pantry. Every time a dish, some flour, or a little spice is needed, it necessitates a special trip across the kitchen and back again. This is all unnecessary, when one stops to think of it, and hundreds of steps can be saved if we will use a little forethought and judgment. A double shelf, placed at a convenient height above the kitchen table, will hold the jars of spices, tea, coffee and all the little necessities of the daily cooking, and there is nothing better for these than pint, quart and two-quart fruit cans. Not only are the tops air-tight, thus preserving the original freshness of the contents, but a glance will show what each one holds. Pretty blue and white crockery jars can be bought at the large department stores, but they are really not as convenient in many ways, and a row of the glass jars, neatly kept, is not at all bad to look at. A row of hooks and a thin strip of wood, underneath the shelves will hold the kitchen spoons,

knives, forks and smaller utensils, and save many extra steps. If a kitchen cupboard for the pots, pans and kettles is not a present possibility, a very good make-shift is a good sized dry-goods box, fitted with shelves and plenty of nails for hanging up frying pans, etc. If this is stained or painted to match the woodwork, and an inexpensive curtain is hung in front of it, it will, in fact, add to the appearance of the room. If the war against extra steps is once begun by the housekeeper, even those who think they have everything conveniently arranged will find many opportunities for improvement, and the result will be a wonderful saving of both time and strength, without taking away the neat appearance of the room.

EXPERIENCE DEPARTMENT.

Mrs. A. J. C., of Moline, Ill., says: "Many recipes for frozen dainties call for a mold, with hollow center. I live out in the country and we do not have opportunities to get all the latest things in cooking utensils, but I have a plan which works out just as well as though I had spent a couple of dollars for a mold. I take a good sized lard pail, the kind which is even size from top to bottom, and has a tight cover. I pack my ice cream an inch thick on the bottom of the pail, then set in a pint fruit can, and pack the cream around this. When I put on the cover, I always wet a strip of cloth or paper

in butter and put it around the edge of the cover, and it makes it perfectly water tight. It is an easy matter to remove the jar before serving, and fill the hollow center of the ice cream with anything I wish. Fresh fruits, an ice or fruit jelly are especially good."

Mrs. C. J. F., of Midland, Mich., gives some good housecleaning hints, which are possibly a little late for the regular spring cleaning, but will come into play all through the year. She says: "The washing of lace curtains, which used to be such a bugbear to me, has lost all its terrors. I soak them over night, after folding them carefully, in lukewarm suds. In the morning I put in enough warm water to make the water again lukewarm, and knead and press them, but do not rub them. Naphtha soap does away with the clinging of the dirt. I put them through another suds, and rinse them until the water is perfectly clear, but do not undo the folds all this time. If they are to be cream color, the last rinsing water has some clear coffee in it. I starch them, and now comes the labor saving. I do not possess frames for drying them, but I get fine results by laying them on my clean, grassy lawn, in the sunlight, and fastening every loop by sticking a toothpick through it into the ground. Several curtains can be dried, one on top of another, in this way. The result is all that could be desired. My windows I keep clear and sparkling by rubbing them over with a cloth wet in a bowl of kerosene and water, about two tablespoonfuls of each, and rubbing them dry with a cloth free from lint, then polishing with soft newspaper, or better still, old, crumpled tissue paper. I never destroy any tissue paper, but keep it for polishing. Get some lambs' wool, fasten it in an old mop stick, and you have the best wall cleaner on the market. Powdered borax, sprinkled around edges of carpets, will drive away moths, and once, when I was so unfortunate as to move into a house infested with cockroaches, I soon disposed of the pests by mixing borax with sugar and sprinkling it around their favorite haunts."

Woodland's Farm 3d Annual Sale

6000 heavy laying White Leghorns, Barred Plymouth Rocks and White Wyandottes at prices within the reach of all. You cannot afford to miss this opportunity to stock up with birds of our heavy laying strains. Stop and think, we have 835 Trap Nests in actual use. TRENTON INCUBATOR CO., TRENTON, N. J.

(SUCCESSORS TO THE PERPETUAL HEN CO.)

Manufacturers
of the

NATURAL

INCUBATORS
& BROODERS

The best machine made because nearest to nature. Made of paper—best non-conductor of heat and cold. Lighter than wood, fully as strong and far more durable. Will not warp or shrink—no seams to open. Not subject to climatic changes, tous of fresh air. Natural air conditions. Having natural air conditions overcomes the moisture troubles and no artificial moisture is required. The NATURAL will produce the strongest, healthiest and most vigorous chicks possible.

The NATURAL BROODER, constructed on the same principles, will raise the chicks. No fumes or gases in hover room, and air conditions are right. Hover is so constructed that crowding is impossible. Chicks get the warmth from the top, the same as under the hen; no floor heat to cause leg weakness.

COMBINATION BROODER AND COLONY HOUSE. Chicks are put in this house from incubator, and need not be moved until put in their laying and winter quarters; it can be used as a laying house as well if required. This overcomes the trouble of teaching young chicks to a new house, which is often troublesome. The brooder house is transposed into a colony house by removing inside fixtures only.

Prices cheapest, consistent with excellency of product. Machines are result of twenty-five years' practical experience. WRITE FOR CATALOGUE AND PRICES. Information free on all poultry matters. Address

::

12 Escher St., TRENTON, N. J.

Mrs. L. E. S. of Clear Brook, Ohio, tells of her method of utilizing small closet space to the best advantage. She puts small screws on the opposite walls and stretches a picture wire tight across, first slipping the largest size safety pins on the wire, through the little loop at the end of the pin. She doubles a dress skirt exactly in the middle of the belt, and fastens it by putting three of the pins through it, at front, center of belt and back. The skirts hang a little away from the wall, and keep all their folds perfectly, and two or three may be placed two or three deep without wrinkling the goods. The pins will slip along easily on the wire.

Mrs. C. N. M. of Burlington, Colo., says: "I have been interested in your plea for flowers around the farm house and have tried to carry out your idea, with the result that at present it looks as though we will have the prettiest, coziest farm home in eastern Colorado, even though it is a tiny one. A belated snow storm took the tops of the nasturtiums when they were just above the ground and I thought I would have to replant, but I discovered that they are hardy little things, and though they looked absolutely dead, they soon put up second leaves, and are now almost ready to blossom. I write to advise people to wait a little after a discouraging frost, and see if the second planting cannot be avoided."

Mrs. F. V. K. of Englewood, Ill., sends some useful hints, as follows: "Rub a tiny piece of butter on the nose of a cream pitcher, and the cream will never drip onto the tablecloth. Butter will remove almost every stain from white goods except ink. Rub it into the stain, then wash quickly in hot water with fine soap. None of the bottled cements are as satisfactory for mending crockery as plain, old-fashioned white lead. Apply it to the broken parts, press them tightly together, and if possible tie into shape, and let stand for a day or two. They will resist both hot and cold water better than any other cement."

Mrs. Vera N. H. of Fort Scott, Kans., says: "I hesitate to speak of my favorite sewing help, it is so simple, but until I used it I was always having trouble. Now I keep a heavy flat stone in my work basket, and when sewing on heavy goods, the stone keeps it from slipping, and allows me the free use of both hands for my work."

Around the Cook Stove.

Put a silver dollar in the bottom of the jam kettle, and you will not have to keep stirring the jam to prevent its catching on. The constant motion of the dollar while the jam is boiling does the work.

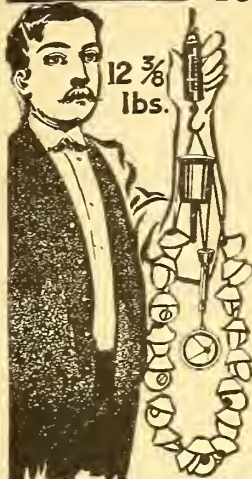

Prick potatoes deeply before baking them. They will cook quicker and be just as mealy.

Use hot milk instead of cold, when stirring up mashed potatoes, and they will be far more light and fluffy. If you have a little left over jam or jelly, drop it into the centers of the cored apples before baking them. You will want to do it regularly thereafter.

If your soup is too salty, drop in a few slices of raw potato, and let it cook a little longer. They will seem to absorb the salt.

The Difference

Comes Out of YOUR Pocket

A common kind of "Bucket Bowl." Heavy, hard to wash, easy to rust.

If you don't know that Sharples Dairy Tubular Cream Separators are different, take no chances until you find out. "Bucket bowl" agents depend on catching the fellows who don't know. Don't let them take the difference out of your pocket. One difference is in the bowl.

Shake The Insides Out!

Before you buy a separator shake the insides out of the bowl. It will show you how heavy, complicated, hard to wash, easy to injure, quick to rust, "bucket bowls" are as compared to Dairy Tubular bowls. Sharples Dairy Tubulars are different. Nothing inside Dairy Tubular bowls but a small dividing wall of triple tinned pressed steel—no bigger than a napkin ring—good for a lifetime. Yet Tubulars have twice the skimming force of any other separator—skim at least twice as clean.

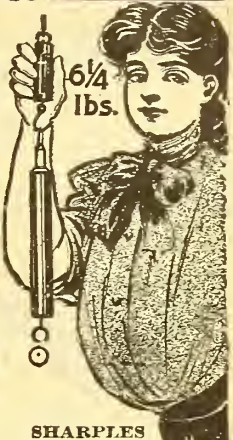

You have common sense—want to save your wife work—want to save yourself repairs and cream—so why not learn about this now? Our free catalog N-205 shows many other exclusive Tubular advantages of great importance to you. Also ask for free book, "Business Dairying," covering everything from calves to butter.

Sick Chickens

Keep your chickens in dry, comfortable quarters and they'll be comparatively safe against disease. If they do get sick, the right remedies quickly bring them about.

Madoc Gape Cure is quick and sure; for severe cases use a **Gape Worm Extractor**. Different **roup cures**—all good. **Lice Killers**—easy to apply and do the work thoroughly. My **Illustrated Poultry Supply Book** tells about the various remedies, colony houses, the best foods and other helpful supplies. Write for it—free. Ask me to help you solve your problems.

STOKES' SEED STORE

WALTER P. STOKES, of late Johnson & Stokes
219 Market Street, Philadelphia

1 FOOD 2 FOR THE LITTLE FELLOWS

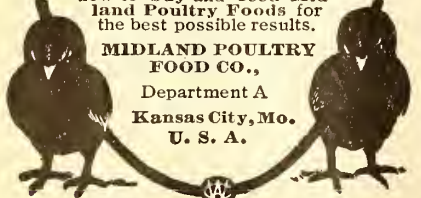

Nursery chicks need especially good food—it must be adapted to their delicate digestive organs. Maybe that's why so many of your chicks die. They won't if you feed the baby chicks **No. 1 Midland Poultry Food** from the first feed until they are two weeks old. By that time they will be ready for **No. 2**, which will keep them growing. These two foods will insure you raising a greater percentage of your chicks this spring than you ever raised before. Just try it and see.

Midland Poultry Foods

are fed in mash form. The fowls therefore get all the elements we blend in the food to make a proper scientifically balanced ration. Cannot eat the parts they like best and leave the parts they need most. There are many advantages in mash foods, but if you prefer a dry chick food we can supply you the best one made in our **Midland Chick Food**—all food—not two-thirds broken rocks and cheap grits with a few seeds. **Midland Foods** are used by more successful poultrymen than any other food. Why? Because they have proved their value as money-makers. Write today for our two poultry books, "The Science of Poultry Feeding," and "Poultry Raising Perfected." They will be worth dollars to you but we send them free and tell you how to buy and feed **Midland Poultry Foods** for the best possible results.

TRY THESE PUDDINGS.

One of the troubles which has much to do with the rapidly whitening hair of the housekeeper is the daily recurring question: "What shall I get for dessert?" There are many simple and inexpensive desserts which can be prepared with but little expenditure of time or money. Here are a few which will perhaps help to solve the question for some of our readers.

Tapioca Snow Pudding.—Three tablespoonfuls of tapioca soaked over night in a cup of cold water. (If possible, always buy the Minute Tapioca, which does not require more than a few minutes soaking.) Boil one quart of milk, stir in the tapioca and let it boil, then stir in the yolks of two eggs beaten with a cup of sugar, season with lemon, turn into the serving dish, and cover with a meringue made of the whites of the eggs and sugar. Serve cold.

Transparent Pudding.—Beat four eggs very light; then add one-quarter of a pound of sugar creamed with the same amount of butter, and flavoring to taste. Rose flavor is especially delicate. Butter a pudding dish, and line it with slices of stale cake; sponge cake is the best. Pour in the egg mixture and bake.

Silver Pudding.—Put one even teaspoonful of cream of tartar into a dish, break in the whites of five eggs and beat to a stiff froth. Add one cup of powdered sugar and beat well. Add twelve prunes stewed until very tender and cut in bits. Set the dish in a pan of hot water and bake it twenty-five minutes in a hot oven. Let it cool, turn out and serve with whipped cream.

Indian Tapioca Pudding.—Three tablespoonfuls of tapioca soaked until clear, in cold water. Add to one pint of scalded milk three tablespoonfuls of Indian meal, one-half cup molasses, one-half cup of sugar, butter the size of a walnut, the tapioca, a little salt and one pint of cold milk. Bake in a moderate oven two and one-half hours.

Bartol Pudding.—Beat the yolks of four eggs with half a cup of powdered sugar, the grated rind and juice of one orange. Add the stiffly beaten whites of the eggs, half a cup of flour and half a teaspoonful of baking powder. Mix thoroughly, turn into a buttered tin and bake twenty-five minutes in a moderately hot oven. If you have a cake tin with tube in the center, or a mould with hollow center, use this for the baking. When done, remove from the mold, fill the center with jam or thick preserves, and serve with whipped cream.

THE MONTH OF STRAWBERRIES.

Strawberries are the one fruit of which no one seems to tire. Every one has their favorite way of canning and preserving them for winter use, but we are too apt to get into a rut when serving them fresh, during the season. Here are some ways which are quite new, and which will add variety to the family table:

Snowflakes with Strawberry Sauce.—Combine as in mixing cake half a cup of butter, a cup of sugar, half a cup of milk, two cups of flour, a teaspoonful of baking powder and the stiffly beaten whites of four eggs. Turn into well buttered cups and steam about half an hour. Turn out, roll in pow-

dered sugar, and serve hot with strawberry sauce made by creaming together a third of a cup of butter and a cup of powdered sugar. Flavor with vanilla and beat into the mixture a cup of berries. Put this in a square dish and chill on ice, then cut in squares and serve.

Frozen Strawberry Dainty.—To one quart of berries add one cup of sugar. Mash and when the sugar is dissolved, press through cheese cloth. To the juice add an equal amount of cream and more sugar if needed. Freeze.

Strawberry Ice Cream.—To one quart of berries add one quart of thin cream and two cupfuls of granulated sugar boiled to a syrup with one-half cup of water. Mix well, mashing the berries. Strain and freeze. Pack in a fancy mold with hole in center, and tight cover. Let stand two hours, remove, and fill center with hulled and sweetened berries.

A DISH OF GREENS.

Every one has one or two favorite dishes of greens, which they cook in the spring and early summer, but few people know how many of the early growing wild things can be cooked in this way, or how delicious they all are. Every one has eaten dandelion greens, and spinach is now one of the most common of green things to be bought at the groceries and fruit stores, being on the market practically nine months of the year. Among other greens which are popular in different localities are cowslips and young beet tops. On the western prairies every one cooks "lamb's quarters," and the name is a puzzle to the easterner until she sees the green and exclaims, "Why, it is nothing but pig weed!" It is nevertheless one of the most delicious of all the spring greens. If you want to have a new experience, and live in a country where milk weed abounds, cook the first tender shoots, and you will find them as delicately flavored as asparagus. The little "fiddle-tops" of the young brakes are quite as good, and there are many people who declare that young nettles and even purslane, that bane of every flower garden, are worth giving a trial.

are winners and layers. Stock and eggs for sale. Write wants. Satisfaction guaranteed.

E. J. FISH, Strongsville, Cuy. Co., Ohio

A CHEAP AND SUCCESSFUL WAY OF RAISING CHICKS.

Well! Well! Here we are in the merry month of June, with a large number of small chicks, and the talk of many a poultryman is that, "I have not room for any more chicks, so I will have to break up my breeding pens and quit for the season."

This can be prevented by a very small cost and what I call the most successful way, and that is by using small portable houses; in fact, I think this is the easiest way of all.

I have what I call a brooderhouse, where I keep the brooders all the time. As soon as the chicks can do without the brooders I put each brood in one of these small houses and haul it out in the meadow where the large chickens will not bother the small ones.

I think this is a very good way, as there are all kinds of bugs, worms and all other insects which the little fellows

over the food as though they never saw it.

This is a simple proof that the chicks would sooner be out rustling than to be kept in a yard and stuffed with some growing or fattening foods.

I have had people tell me that they would not grow as fast by this method as to be kept up and fed all kinds of wonderful food, but here is where I differ, as I have tried both ways, and by the time they were ready for market the meadow chicks would average about one-half pound more.

That is not all. There is not 50 per cent as many that die in the meadow if they are supplied with fresh water and their houses kept clean.

Now there is no doubt but there are several who do not like this plan, but I wish to say to those who have not tried it to "try it" and see if it is not cheaper, easier and the nearest "save 'em all" way that is out.

Albert D. Nelson.

Minden, Neb.

Remember our new address when writing us and address us to 103-113 South Clinton street, Chicago, Ill.

The old reliable Ira C. Keller, of Prospect, Ohio, has been doing a flourishing business with his Golden, Silver, White and Black Wyandottes. He wishes to make room for young stock so will dispose of some of the finest breeding birds of these four varieties at greatly reduced prices during the next few weeks.

There always has been and always will be a demand for good poultry judges. Associations looking for a good man will do well not to overlook H. A. Emmel, Mars, Pa.

SILVER LACED WYANDOTTE.

Indianapolis Queen, winner of first at Indiana State Fair, 1906; second at Noblesville, 1906; first at Elwood, Ind., 1907. Owned by E. B. Barnett & Son, Michigantown, Ind.

like to catch. There is one great reason why I admire this plan, and that is, it is so easy to keep them clean from mites and lice.

These portable houses are only 3 ft. high on the high side, and 2 ft. on the low side, and 5 ft. long by 4 ft. wide.

They are made of shiplap lumber and the frame part is 2x4 in. stuff.

The sills are 2x4 on edge, and the one edge is cut bevel, so it will answer the purpose of a sleighrunner. Holes are made in the end so a rope or a wire may be put in, and hitch a horse on it and can be hauled anywhere desired.

They are made so the top and bottom can be lifted off, so it is very easy to clean. The top is made of common sheeting boards that are shingled the same as another house. The bottom is made so it is large enough to hang on the sills (as they are along the side of the house), and a couple of rings can be attached so as to make it convenient to lift in and out.

I put a window light in these coops, a 9x12 gives them a great plenty of light for the little time they are in.

I have noticed by having these coops out in the fields that the chicks do not eat half the amount of food as to have them around the house.

I have tried to scatter food in front of the house (in the meadow) and then let the chicks out. They would run

PRIZE WINNERS FOR SALE CHEAP By the Great Central Poultry Farm

In eight weeks our birds have won 3000 prizes at state and county fairs. This indicates the quality of our stock. There is no better in the country. As breeders we fully understand our business. We ship nothing but standard birds. They are fully guaranteed and warranted to reach our customers at the nearest express office in good condition. If any fowl fails to do this we duplicate the bird. Eggs in season from all our breeds. We are now hooking orders for stock, shipping daily.

We have recently purchased the entire stock of one of the largest breeders of Partridge Cochins in the United States, and we are able to furnish prize winners in this variety. Send for our special prices. We offer the following varieties to our customers:

- | | | |
|----------------------------|-------------------------------|------------------------------|
| Light Brahmas, | White Minorcas, | Buckeye Reds, |
| Dark Brahmas, | Single Comb Brown Leghorns, | Rhode Island Reds. |
| Partridge Cochins | Rose Comb Brown Leghorns, | *Houdans, |
| Buff Cochins, | Single Comb White Leghorns, | *White Crested Black Polish, |
| *White Cochins, | Rose Comb White Leghorns, | Cornish Indian Games, |
| *Black Cochins, | Buff Leghorns, | *White Indian Games, |
| Black Langshans, | *English Red Caps, | Black Breasted Red Games, |

Questions and Answers

Questions asked by subscribers will be answered in this department only under the condition that the full name and address is signed by the writer.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer the following in your next issue: We have a fine two-year-old B. P. R. cock. Last spring we used him to breed from with the best of results, but this spring out of four settings of eggs we found after breaking them all not a sign of fertility. He seems in the best of health and until two weeks ago has had

to be just a thin skin, does not seem to bother or hurt him. Would you advise picking or cutting it? (2) When he was about 5 months old he had what is commonly called the sore head or chicken-pox, but now seems to be in perfect health. Would you advise breeding from him? (3) Should White Plymouth Rock chicks 5 days old have feathers on their wings about half an

RALPH W. STURTEVANT, DELAVAN, WIS.

free range. Can you tell what is the matter with him? W. F. M.

Elgin, Ill.

Answer.—This may be the fault of the hens. They may be too fat. If it is the fault of the male the only thing for you to do is to get another male bird.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your next issue: (1) I have a White Plymouth Rock rooster a little over 1 year old which has a small clear growth on the side of his eye. It is clear, full of wind, soft, kind of under his eyelid at the top. It seems

inch long? (4) How about lard for killing lice on little chicks? L. P.

Tehuacana, Texas.

Answer.—(1) Would not bother with it as long as it does not affect him otherwise. (2) No. (3) There is no reason why they should not. (4) There is nothing better. See answer to H. L. in this issue.

Editor American Poultry Journal.

Dear Sir: Will you kindly answer in your next issue the following: I bought a Golden Laced Wyandotte cock from a breeder. This bird when he came was a fine-looking bird, but there are a number of white feathers in the tail

that came in quite recently. Is this common for this breed? Would it be proper to breed first-class stock to this bird for good results? J. M. A.

Broughton, Ohio.

Answer.—This occurs quite frequently in breeds of poultry. Would not advise breeding from this bird if you are breeding for exhibition.

Editor American Poultry Journal.

Dear Sir: Please answer in your Questions and Answers column: (1) I have had thirty-four White Pekin Ducks hatch and only have eighteen left; they seem real bright until they are about a week old and they twist their head and stagger around and in a few hours are dead. I have used Lee's Lice Killer and a louse powder also. And my ducks get poor. I feed them moist bread and some cornmeal. I keep them with a hen and have a good dry coop to put them in nights. The ducks scratch as though they had lice, but I cannot find any on their bodies. (2) Will it be good for the ducks to have water to swim in? Mrs. L. L.

Rockwell City, Iowa.

Answer.—(1) Improper feeding is the cause of your trouble. Ducklings should have plenty of sand mixed with their feed. Give stale bread soaked in water or milk, squeezed dry and thoroughly mixed with coarse sand. Always keep plenty of fresh water for them to drink and wash their bills in. A little lard, to which has been added a few drops of kerosene oil, rubbed on the top of their heads will rid them of any lice they may have. (2) Young ducks should not have water to swim in until they have feathered out.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions: (1) Are ground egg shells of any value for hens and chicks? If so, please state what. (2) How many fowls of the American class will a yard of 4,000 square feet accommodate? (3) How many fowls will a house 14x24 accommodate? (4) Will the second floor of this same house do for a breeding pen for six hens and one cock? (5) What would you advise one to sow for summer and winter forage? C. A. L.

Springfield, Ill.

Answer.—Ground eggshells are good for laying hens, as they supply the ingredients for making new eggshells. (2) About 200. (3) Thirty-five. (4) Yes, if they are supplied with the proper amount of animal and green food. (5) Alfalfa or rye.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: (1) I have Buff Plymouth Rock fowls. One became ill, weak and droopy, then would stagger around, apparently blind; after two or three days could not stand up and would sit backward with tail on the ground. Droppings dark color with the white portion slightly tinged with yellow. I finally applied the hatchet. What is the disease and the remedy? (2) I have another hen that appeared droopy; on examination I found the crop full of watery substance which ran out of the mouth when caught, and was exceedingly offensive, smelling like very bad carion. I removed all I could of it and the next morning it was full again. Some hens followed me as I

worked in the garden. Could this condition be due to an excess of earth worms? What can be done in this case?

Sheridan, Ind. G. F. O.

Answer.—(1) This is probably due to liver trouble, brought about by improper feeding or by feeding moldy grain. Give limewater in the drinking water and stop feeding grain for a few days. Give plenty of green feed and stale bread soaked in sweet milk and seasoned with a little powdered cinnamon. Boiled rice is also good. (2) Give same treatment as No. 1.

Editor American Poultry Journal.

Dear Sir: Please answer the following question in your next issue: Which produces the best results, green meat scraps, or should they be cooked before being run through a bone cutter?

Elkhart, Ind. H. H.

Answer.—Best results will be obtained from the raw product.

Please note our new address, 103-113 South Clinton street.

Editor American Poultry Journal.

Dear Sir: Please answer in June number: (1) How late in the month can one send in questions and be on time? (2) Would you say that bone-meal could be set out where chicks or fowls can take it at any time? (3) Will it keep in hot weather? (4) Will mustard seed hurt chickens? (5) Are the White Rocks more delicate when small than the Barred Rocks? (6) Can Kaffir corn be used in the same way as field corn for fowls of all kinds with same results?

Mrs. W. B.

Answer.—(1) They should reach us by the 15th to be answered the following month. (2) No. (3) Yes. (4) No, but they are not very fond of it. (5) No. (6) No, it should be mixed with other grains.

Editor American Poultry Journal.

Dear Sir: Please answer in your Questions and Answers columns: (1) Why is it that the Leghorns have no standard weight? (2) Would the Leghorns be a profitable fowl to raise for winter eggs where they have to be shut up most of the time on account of severe winter? (3) Will you give me the address of the register of copyrights?

D. B.

Boyne City, Mich.

Answer.—(1) Because the makers of the Standard so desired. (2) We see no reason why they should not. (3) Washington, D. C.

Editor American Poultry Journal.

Dear Sir: As I am a reader of your Poultry Journal, I would like to have you answer the following questions in your next: (1) What is the cause, preventive and cure of gapes in small chicks? (2) What is the cause and cure of scaly legs on young chicks? (3) What is the cause, preventive and cure of cholera among chickens?

Roann, Ind. G. E. G.

Answer.—(1) Gapes in young chicks are caused by a small worm which they pick up from the soil, and which lodges and breeds in the windpipe of the chicks. There are several good gape-worm extractors on the market with which the worms can be removed. (2) Scaly leg is caused by the fowls being confined in damp, filthy quarters. Frequent applications of sulphur ointment

and dry clean quarters will soon effect a cure. (3) There is very little fowl cholera in this country. There is no positive cure. To prevent cholera, the premises should be in a thoroughly sanitary condition and should be disin-

S. C. R. I. RED COCKEREL.

Winner of first and shape special at Philadelphia, Pa., in a class of twenty cockerels. Bred, owned and exhibited by George W. Tracey, Kinderhook, N. Y.

affected frequently with a 10 per cent solution of carbolic acid.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following in your next issue: (1) I run my incubator at 103 and I find that

as soon as the chicks commence to hatch it takes less heat to run it. Do I want to run it at 103 until the chicks are all hatched? (2) Is there any way to mate so as to get pullets instead of roosters?

E. J. S.

Bemis, Me.

Answer.—(1) When the chicks commence to hatch the heat should be increased to 104 or 105 and allowed to stay there until the chicks are all out. (2) No.

Editor American Poultry Journal.

Dear Sir: (1) I notice in your issues advertisements of "Lakenvelders," a new or scarcely known breed of fowls. What information is published regarding this breed? Has this breed been the subject of an article in your Journal or any of the other poultry papers? In regard to egg production, how does this breed compare with others? What, if anything, commends this breed to poultrymen or fanciers? What are the distinct characteristics of this breed? (2) Are Blue Andalusians bred to any large extent in this country, and, in your opinion, how do they rank in egg production? We have a few hens and they are very good layers, comparing favorably with Leghorns. Is this generally true of Andalusians? Do the fanciers look upon the Andalusians with favor? Is there a great demand for these fowls? (3) Do the Dorkings have a good following in this country? How do they compare with other breeds

Kill Them All

Lice, mites, jiggers, fleas—vermin of every description. Kill them on the roost, in the nest-boxes, on the walls, in the barns, sheds, hog-pens—wherever they are to be found.

LEE'S Lice Killer

is easily the best for this purpose. It kills both by vapor and contact. Paint the roosts and the vapor penetrates the fluff and feathers of the fowl and destroys vermin instantly. Spray it on the walls, in the cracks and crevices of your poultry-house and the vermin question will be solved for you.

The nice thing about Lee's Lice Killer is the ease with which it can be applied and its thoro effectiveness. It is the strongest and best insecticide on the market today, used everywhere, and endorsed by poultry-raisers all over the world.

You can't afford to be without it. The health and contentment of your fowls require it; your poultry success demands it.

Use Lee's and thereby avoid the laborious disagreeable work so necessary with the dusting, dipping, or greasing processes. Use Lee's and know that you are using the best insect destroyer that has ever been produced.

Guaranteed? Yes. All of Lee's products are—but be sure you get the genuine.

Price 35c, 60c, and \$1.00

If your dealer won't supply you, we will send you a gallon, express prepaid, for \$1.25, and an Egg Record free.

Geo. H. Lee Co.,
Omaha, Neb.

in regard to egg production? Thanking you for the above information, I am,
Philadelphia, Pa. H. G. W.

Answer.—(1) Lakenvelders are a comparatively new variety in this country and very little has been printed about them. We are not familiar enough with this variety to give you any information. (2) Blue Andalusians were at one time very popular in this country, but of late years have not been bred very extensively. They are excellent egg producers. The demand for this variety at the present time is very limited. (3) The Dorkings are considered one of the best of market fowls, but are not very popular in this country.

Editor American Poultry Journal.

Dear Sir: Please advise through your Questions and Answer columns what Rhode Island Reds were originally bred from. W. S. G.

Grafton, Ohio.

Answer.—It is rather difficult to determine the correct origin of the Rhode Island Reds. In the May, 1906, issue of American Poultry Journal was printed a very lengthy article on the origin and history of this variety, and this with many other articles and illustrations will be printed in book form in the near future.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue the following questions: Is there a book printed on Silver-Laced Wyandottes, i. e., breeding, mating, marks, color, etc., also White-Crested Black Polish, and the name or names of the publishers? K. L. B.

Eric, Pa.

Answer.—We have a book on the Wyandottes. Price, 50c. Also one on Polish. Price, 50c.

Editor American Poultry Journal.

Dear Sir: Will you please answer these questions in your next issue: (1) I have some Single-Comb Black Minorca chickens nearly 3 weeks old; are well feathered and seemed very healthy, but now some begin to look droopy. I have doctored well for lice, powdered and greased their heads. What can be their ailment? (2) What makes a hen that seems perfectly well, with very bright comb, change in a day or two until her comb is almost white. (3) What is the best method to clean a hen and chicks that have lice? (4) Are Single-Comb Black Minorca chickens hard to raise? (5) Is sulphur good to feed in a mash? Mrs. J. A. W.

Adams, Ore.

Answer.—(1) Change their diet and give them plenty of exercise. Medicine is no good for little chicks. (2) This is due to liver trouble. Give one of Carter's Little Liver Pills each day for three or four days, also give limewater in their drinking water, about four tablespoonfuls to each quart of water. (3) Dust the hen thoroughly about three times a week with some good lice powder. Grease the tops of the heads of the chicks with lard, to which has been added a few drops of kerosene oil. (4) Not any more so than other varieties. (5) Yes, if given moderately.

Editor American Poultry Journal.

Dear Sir: Please answer these questions in your valuable journal: (1) My chickens were lousy; I put on their

BOSTON COACH AXLE OIL helps the wheels go round. Makes heavy loads light and hard roads easy. Better than Castor Oil. Everywhere—all sizes. Made by

STANDARD OIL CO.
Incorporated

heads and under their wings kerosene and lard one day in the morning; a few hours later they began to walk backward; they did not eat, but drank a great deal; some of them fell on the ground and could not rise; the same day some of them died; the following day a great number of them died; only the oldest ones are good humored. (2) What is the best way to cut a little off the long spurs of a cock? (3) From the U. S. A. to my city the mail and parcel post spend one month and pass through many vessels, railroads and severe climates, some warm and some cold; do you think it does hurt the eggs for hatching? (4) In natural incubation, what is the best way to prevent the chicks dying in the shell? (5) How shall I make the nests to obtain good results? (6) Is it advisable to have wet bran to form worms to give the hens, or what is the best way to obtain them? (7) The fowls in the morning wish to drink before they eat, is it good or not? N. A.

Bogota, Colombia, S. A.

Answer.—(1) You probably put too much of the mixture on them and had too much kerosene oil in it. A few drops is all that is necessary. We have used this remedy for years and never noticed any ill effects from it. (2) Saw them off and smooth the edges with a fine file. (3) The long journey and changeable climate would certainly have some effect on the eggs. (4) We cannot say. (5) Take a fresh sod and place it with grass side down, scoop out the earth so as to make it the proper shape, then put on a layer of dry straw or grass. (6) Worms are not an absolute necessity. Feed raw meat or fresh ground bones. (7) This will injure them.

Don't forget the new address of American Poultry Journal, 103-113 South Clinton street.

Editor American Poultry Journal.

Dear Sir: I was just reading through your "Hand Book," which you sent to me some time ago, and I find many useful suggestions in it. I have used some of the means of promoting better results with great success. I have an Ancona hen that laid about 450 eggs in the years 1905 and 1906 and then this spring got what seemed to be "growing light" to me. She got as thin as a crow and one eye was swollen shut. I tried an experiment that was a success. I gave her hot water, ginger and sugar a few times and she is now getting heavy again and sings like everything. She seems to be getting well.

South Omaha, Neb. F. A. A.

Editor American Poultry Journal.

Dear Sir: As I am a subscriber to your good paper, I would like to have you answer a few questions: (1) What kind of feed should young Pekin ducks have for about three weeks after they are hatched? (2) Do duck eggs hatch as well in an incubator as under hens? (3) Will you please tell me the name and address of the best little chick food. (4) What kind of sleeping places should young ducks have? A. A. K.

Manhattan, Will County, Ill.

Answer.—(1) Stale bread soaked in water or milk and squeezed quite dry, to which add plenty of sand or fine gravel.

They should also have plenty of tender grass. (2) Yes. (3) We never say which is the best. You will find a number advertised in these columns, and we consider them all good. (4) They should be brooded the same as little chicks, and their sleeping quarters should be dry and warm.

Editor American Poultry Journal.

Dear Sir: Please answer the following questions in your June number: (1) How much does it cost to raise ten chickens from the time they hatch until they are 10 weeks old? (2) What is the best way to prepare oats for chickens' feed? (3) How should I prepare alfalfa meal for my chickens? (4) I would like to know the meaning of the words double mating. (5) What makes a hen crow? I have one, and my rooster fights her like she was another rooster. (6) I would like to know the average number of eggs a hen will lay from the time she leaves

get to it. In reply to the question about ducks, I never allow ducks to run with hens, for they are easier to raise by hand; take them from the hen as soon as hatched and put in a box, with sand in the bottom; every day they are allowed to run in the yard and at night I put them in a warm shed in the box and cover the top with an old cloth and they grow fine. I scald ducks when killed. Scald by dipping in hot water and then wrap in a big blanket a few minutes, then dip them again and they will pick as nicely as any fowl. Can anyone tell me where the banty fowls can be found? I never see them in the papers.

Mrs. E.

Utica, Minn.

Editor American Poultry Journal.

Dear Sir: Will you please answer in your next issue these questions: (1) What is the cause of chickens dying in the shell in the incubator soon after the shell is pipped, and some did not

A flock of four-month-old White Leghorn cockerels on the Bonnie Brae Poultry Farm, New Rochelle, N. Y.

her brood until she wants to set again. St. Louis, Mo. D. W.

Answer.—(1) This all depends on how you buy your feed and what you feed. It should not exceed 15 cents. (2) Boiled and mixed with bran and vegetables. (3) Pour boiling water on it and let it stand over night. It can then be mixed with the mash or fed by itself. (4) Double mating is where two matings are made, one for cockerels and one for pullets. This is practiced by Barred Plymouth Rock and Brown Leghorn breeders who desire to produce exhibition birds of both sexes. (5) We are unable to say. (6) The number varies from twelve to fifty.

Editor American Poultry Journal.

Dear Sir: I have had two copies of the Journal and like the paper very much. In reply to question about Northern corn, we never put anything in the corn in the North to keep out weevil. Do not think it needs to be done in the South. Cornmeal will get wormy sometimes if moth millers can

pip at all? I had about 125 eggs that did this. (2) At what age should chicks be taken from brooder? (3) Would it be all right to line a chicken house 10x14 feet with roofing paper to make it warm for March chicks? (4) Will it hurt to feed brood hens beef scraps? (5) Is it a good idea to pick out small eggs for hatching? (6) What kind of feed is good for little chicks after they are 3 weeks old?

Mount Vernon, Ind. F. L. S.

Answer.—(1) Read answer to A. H. D. in this issue. (2) As soon as they are feathered out fairly well and weather will permit; usually about 6 to 8 weeks. (3) Yes. (4) No. (5) No. Medium-sized eggs are best. (6) Whole wheat, clipped oats, buckwheat, cracked corn, etc.

Call and see us in our new location, 103-113 South Clinton street, Chicago.

Editor American Poultry Journal.

Dear Sir: Please answer in your next issue the following questions: (1) I had thirty-four fertile eggs on

the eighteenth day and the twenty-first day only four came out and the others were dead in the shell. What is the cause of that? That was in a hot air incubator and from the first day to the twenty-first day 103 degrees were kept all the time. (2) Do you believe that boiling water from a kettle put under the incubator after the seventeenth day is good to soften the shells? (3) Do you think oats and bran given every day to the hens is good? A. H. D. Montreal, Canada.

Answer.—(1) This is due to various causes. One of the most frequent is breeding from poor and diseased stock, which results in the germ being weak and consequently the chick has not enough strength to get out of the shell. Another is that the eggs are kept too long before hatching. It also happens quite frequently that the thermometer used is not correct. (2) We do not believe this would do any good. (3) Oats and bran make a good feed, but this should be fed continuously. Frequent change of ration is necessary to keep the fowls in a healthy condition.

Editor American Poultry Journal.

Dear Sir: Will it affect the breeding of a hen if allowed to run with cock of another breed? H. A. M. San Bernardino, Cal.

Answer.—Some breeders claim it will and others it will not. Our opinion is that it will.

Editor American Poultry Journal.

Dear Sir: Please answer the following in your next issue: I bought a pen of guaranteed thoroughbred Single-Comb Buff Orpington chickens from a noted dealer advertised in your paper. When chickens were hatched from eggs of same some of the chickens had feathers on their legs and two had crippled legs heavily feathered. Every egg I set was fertile. Are the parents mated wrong or are they not as represented, and what is the cause of the feathers and cripples? Eggs set under a hen and also incubator. H. B. B. Lakin, Kan.

Answer.—It is no uncommon thing for Orpington chicks to have feathers on their legs when hatched. In the origination of this variety of fowl a great many varieties were used and among them the Asiatics, and the Orpingtons have not been bred long enough to entirely eradicate this tendency to "throw" chicks with feathers or "down" on their legs. Crippled chicks come in all varieties and are usually due to sudden jarring of the egg, either before or during incubation.

Editor American Poultry Journal.

Dear Sir: I wish you would kindly answer the following in your next issue: (1) Is it hens, or rather females, which eat feathers off a rooster's neck, and is there any cure besides a bit? (2) Can you advise what to feed little chicks when their wings droop and they pull their head down on their shoulders, if you would call them such? I feed prepared chick food, and they have an unlimited range. They are a month old. (3) What is a good ration from now on? W. J. Jr. Bellevue, Pa.

Answer.—(1) See answer to R. H. K. in this issue. (2) It is not feed they want, but a good lice killer. Grease the tops of their heads with

lard, to which has been added a few drops of kerosene oil. (3) Any of the prepared rations now on the market will give satisfaction providing the chicks have proper care otherwise.

Editor American Poultry Journal.

Dear Sir: Will you please answer the following question in your next issue of the Journal: Is there a remedy, and what is it, to stop chickens from pulling their feathers and eating them?

Melrose Park, Ill.

R. H. K.

Answer.—Powdered aloes dissolved in water and sprinkled on the feathers of fowls will usually have the desired effect.

Editor American Poultry Journal.

Dear Sir: Please answer in June number. (1) I set a hen in April, when the time expired chicks were all formed in shell. Thinking it might be the fault of hen, I set another with same result. Have a strong male bird and pullets 1 year old to breed from. (2) Can you tell me the trouble? Also tell me the cause of deformed chickens? Mrs. C. L.

Westbrook, Me.

Answer.—(1) Read answer to A. H. D. in this issue. (2) This comes from sudden jarring of the eggs, either before or during the hatching period.

Editor American Poultry Journal.

Dear Sir: (1) Can you tell me what is the matter with hens that in a few hours get weak legs? They cannot walk on them. Their combs are red and in other ways are healthy. It does not seem to be a fatal disease. Can you tell me the remedy? (2) What is the cause and remedy for little chicks that get stopped up and droop around? These same chickens are covered with lice. (3) Will lice powder injure young chickens at the age of 1 week? (4) Is oatmeal a good feed for young chicks? (5) Will it injure chicks 4 weeks old to eat corn? H. L.

Galen, Mich.

Answer.—(1) Leg weakness in mature fowls is usually caused by the fowls being kept in damp, filthy quarters, and in most cases is of a rheumatic nature. Give 5 grains of bicarbonate of soda daily in the drinking water for grown fowls. In all cases give cooling food, such as bran, barley, rice, green feed, skim milk, buttermilk and vegetables. Avoid condiments, meat and stimulating rations of all kinds. (2) Improper feed and lice. (3) Grease the top of the heads of the little chicks with lard, to which a few drops of kerosene has been added. This is better than powder and a few applications will kill all lice on little chicks. (4) Rolled is very good for little chicks and should be fed dry. (5) Chicks should not have whole corn until they are at least 4 or 5 months old. A little cracked corn will not injure them.

The new address of American Poultry Journal is 103-113 South Clinton street, Chicago, Ill.

Simon Beuth, German Valley, Ill., the noted Buff Wyandotte man, announces a big reduction in the price of eggs for the balance of the season. He is now selling them at one-half usual price, from his prize-winning pens. Nothing better anywhere. Now is your chance to get the best. See his ad on outside back cover page. Don't forget to mention American Poultry Journal when you write him.

WINNERS IN SUBSCRIPTION CONTEST.

Following are the names of our agents who won the grand prizes in our great contest which closed May 18, 1907:

1—Thos. D. Gannaway, D. C.....	231
2—H. F. Shue, Ohio.....	222
3—I. N. De Sotell, Illinois.....	216
4—Macon A. Green, Tennessee.....	207
5—Simon P. Wirth, Illinois.....	160
6—Thos. Liddy, New Jersey.....	130
7—N. E. Burroughes, Kentucky.....	120
8—Nelson C. Mather, Connecticut.....	93
9—Albert Riggs, West Virginia.....	91
10—Will H. Schadt, Indiana.....	86
11—R. B. Thompson, Minnesota.....	86
12—W. H. Harrington, Ohio.....	86
13—Ira Sitterley, New York.....	83
14—L. C. Buck, New York.....	82
15—C. R. Ellis, Ohio.....	72
16—Henry Zook, Ohio.....	65
17—S. O. Laudenslage, Indiana.....	63
18—S. R. Reelhorn, Ohio.....	61
19—H. Schantzbenach, Pennsylvania.....	60
20—F. M. Draper, Indiana.....	60

Great interest has been taken in this contest from beginning to end, and we congratulate the winners upon their success. We wish to heartily thank all for the interest they have taken in American Poultry Journal and their good work for it. There are agents who did creditable work, but who did not procure quite enough subscriptions to win the grand prizes, but all of them are entitled to the special premiums which we offered, and those whose names are not included in the above list are requested to make their selection from the premium list and let us know at once, if they have not already done so.

We would be pleased to have all our old agents continue taking subscriptions at the price on coupons and they can still work for special premiums.

All mail should be addressed to our new location, 103-113 South Clinton street, Chicago, Ill.

FOWLS' FEATHERS VALUABLE.

One is prone to overlook the value of fowls' feathers when the prices of them are unknown or when contrasted by the worth of fowls and eggs for breeding purposes or the commercial demands for poultry and eggs.

The markets are always open for feathers and the people who save them are the ones who increase their profit in poultry culture.

Everybody instinctively senses (seemingly) the value of geese and duck feathers, but many poultrymen regard chicken feathers as worthless and throw them away as do also many turkey raisers. It certainly must be that those who pursue this method of disposing of fowls' feathers are not properly informed regarding prices obtained for rightly secured feathers. Such wastage results in a loss of one-eighth to one-ninth of the profits that would accrue did they but save all the feathers from dressed fowls.

The prices range from 5 to 40 cents a pound, according to color, grade and quality and the ultimate usage designed. White feathers being from three to five times as much as colored or mixed. The small white breast feathers of chicken fowls are made up into artificial birds' breasts and tails that

adorn many a chic bonnet or hat. So cleverly is this accomplished by expert workmen that lovers of bird life experience twinges of conscience or express sincere regret at such wanton destruction of beautiful birds and perhaps place a ban upon the wearer when in reality the millinery merchant is guiltless of using aught but the cleverly-arranged chicken or turkey plumage as a substitute for the more expensive and rarer feathering of migratory fowl (?) of the air.

Five average sized chickens will yield a pound of feathers. A single car load recently cost the shipper \$1,000. Most hen feathers are used for the cheap pillows and feather-beds and bring about 10 cents a pound, whereas if they were carefully prepared and sorted they would bring the seller 20 to 30 cents. The fine tail and wing feathers saved separate command 40 cents a pound.

In saving feathers the important part is to thoroughly air and dry them before sacking, taking care that all animal heat be removed or the feathers will heat and sweat. Spread them not over four to six inches deep on a clean floor, turn them every day till well cured. Bleeding the fowl in the mouth, picking just at the point of final expiration of life when complete relaxation has taken place, having separate baskets at hand so the sorting can take place at plucking is the preferable way, tossing tail, wing, pointer and short quill feathers into separate receptacles, thus saving the tedious task of reassembling later or taking a low figure for mixed stock. Here as everywhere it is the prime article attractively offered that brings top prices! Feathers dumped into sacks or boxes never bring full market value because their condition is deteriorated and a quick handling of such offerings is impossible.

Eight or more assortments are made of turkey feathers. Fine tail feathers are used for dusters selling at 40 cents or more per pound, the "skirt" feathers sell for fully as much also. The wing and point feathers go to manufacturers of featherbone or as substitutes for whalebone, the larger ones find their way to the milliners after having been cleansed and dyed. White feathers bring highest prices because they can be mixed with duck or geese feathers in the better grade of pillow feathers.

Label each bag or box with neatly-printed shipping tags with gross weight and tare plainly marked. Send a letter of advice with full particulars, separate weights, tare and net weight properly set forth and become convinced that in throwing away feathers there has been a woeful waste. Fine feathers do cover fine birds. The pity is 'tis only too true that the added value of hens' feathers has been lost from poultry statistics because of a lack of accurate knowledge of their practical and commercial worth.

Cincinnati, Ohio, and Chicago, Ill., are good buyers of all grades of feathers. Alma Cole Pickering.

Plainfield, Wis.

Two or three drops of spirits of camphor on a lump of sugar will often quiet the paroxysms of cough in sleeping children.

NEAR ATLANTIC CITY MARKETS

The Garden Spot of America for raising early vegetables, fruit, berries, squabs and poultry is West Egg Harbor, New Jersey. Milder winter and earlier spring than farther inland. No severe weather. Plowing is done during winter. This means early in markets for highest prices with eggs, squabs, broilers and all produce. Best markets easily reached, but 17 miles from Atlantic City, the greatest resort in the world, and 35 miles from Philadelphia, on two main line railroads. Atlantic City's crowds eat best produce obtainable all times of year, regardless of prices.

These West Egg Harbor Farm Plots are on the outskirts of Egg Harbor City, a thriving city, about 3000 population, churches, schools, stores, banks, newspapers and extensive factories. Soil is rich, easy to work and highly productive, healthy climate, delicious water, pure air, good roads. We have a few 5-Acre Farm Plots for \$100; 1-acre gardens, \$35 each—payable \$5 down \$5 monthly. Title insured. If you cannot locate just now, buy for future use and investment. Write for handsome booklet and map.

SEEK GOOD ADVICE—THEN FOLLOW IT.

It is undoubtedly a fact that the principal cause of failure on the part of beginners in the poultry business is their unwillingness to accept and adhere to the advice of those who "have been through the mill," so to speak, of those who have had years of practical experience. Many beginners, there is no denying the assertion, believe they possess more knowledge along the line than they ever will actually acquire. When "the fever" first strikes them, wild dreams of immediate and extraordinary success fill their minds, extensive plans are mapped out, the result of which is usually expected to eclipse any instance of success on record, which result, after a few years, is to double and perhaps treble! The poultry world is "to learn something" from them, and no argu-

early failure, the observance of the same is surely the secret of due success. Of course, under the most favorable circumstances, discouragements are frequently met; nevertheless the beginner who heeds the advice given by recognized authorities may rest assured that he is adopting the best methods in existence, much better methods than he himself could discover in considerable time and at much cost. Of course, the writer is not arguing that the poultry raiser should not have original ideas of his own, but rather to suppress the spirit (so prevalent with beginners) that gives one the desire to raise a thousand birds before he knows how to care for a dozen properly, or the desire to operate a dozen or so brooders before he knows how to set a hen to the best advantage. Only as one gains actual experience can he rely on his judgment as to whether his own origi-

WHITE HOLLAND TURKEYS.

ment can make them deviate in the least from the course traced out in their own imagination. This is an old story, and what is the actual result? Absolute failure, nothing else, followed by complete discouragement, leaving a class of people who go forth to herald that "there is nothing in the chicken business."

"A little done well is better than much done poorly" certainly applies to the raising of poultry as much as to any other profession; and there is not one case in a thousand where a beginner without experience can reach the top at a single bound. It is a good thing to have aspirations and confidence in one's ability to grasp the details that are necessary to make any venture a successful one; but it is certainly blindness and the height of folly to spurn the advice that is so freely offered on every hand by those who have devoted their lives to the subject and who are only too glad to extend a helping hand to the beginner and save him from a bitter and costly experience, which must necessarily be his if he insists on "going it alone," so to speak.

If disregard of good advice, on the part of the beginner, is the cause of

inal (?) ideas will be practicable or not.

Beginners and those who are intending to take up the raising of poultry, with the hope of profit, I cannot urge too strongly to seek good advice and adhere faithfully thereto. Subscribe for a few of the leading poultry journals; each month therein is to be found a gold mine of practical information by the best authorities, which, if properly studied, cannot fail to put beginners on the right track and make success possible of attainment; for success in the poultry business, as well as in any other profession, cannot be reached if "jumped" after in a haphazard manner.

Ethbert F. Downer.
Colorado Springs, Col.

Editor American Poultry Journal:

Dear Sir:—I believe when a man has found a new remedy that he believes to be a good thing he ought to let his fellow beings know of it.

I have watched the Poultry Journals for two years or more; yes, I might say, for eight years, ever since I began to breed and raise poultry for profit, to find something to stop bowel trouble in young chicks, especially since I began to use the incubator and brooder. So far

as my experience goes most any one can hatch chickens by the barrel with our best makes of incubators, but to raise them all is a fine piece of judgment and care. In my experiments to check the bowel trouble in our young chicks I have tried the different makes of nos-trums galore. At last a thought struck me to try lime water, knowing that lime is a good thing for poultry in more ways than one, so I hied myself to the lime dealer and procured a couple of pieces of fresh lime, each about the size of my two fists. I put each piece in a two-gallon jar and turned on a little hot water to slack it, after which filled up the jars and let it settle until clear, when I dipped off the clear lime water and gave it to little chicks, and nothing else, for two days, then weakened it one-half for two days, then one-quarter lime water and three-quarters plain water for a week. I had no more trouble with bowel trouble. I have now used this method for two years with good results and am convinced it is a good thing.

J. M. Pruy.

Lodi, Wis.

MY EXPERIENCE WITH DAY-OLD CHICKS.

The season was getting pretty well advanced when I came to the conclusion to try a few day-old chicks, so accordingly an order was made out and sent to a reliable breeders for sixty chicks to be sent as soon as possible.

I happened to strike it lucky, for the second day I received a card stating that the chicks had been shipped and to look for them that night.

Well, what to do I did not know, for not a hen wanted to set on the place and as there were no brooders ready and the chicks were at the depot it was a clear case of get up and hustle.

So I started down the street looking for sitting hens. I soon found a man who had one that he said he had tried everything from tying red rags and sleigh bells to her tail and ducking her in the rain barrel, still insisted on sitting. I thought she was about the article I wanted, so we soon struck a deal for 75 cents for this one and 50 cents for another one that had been sick with various complaints and had finally come to the conclusion that sitting was more in her line than laying, but I still lacked one hen, for I thought twenty chicks was about right to give to each hen, as the weather was very warm.

But luck seemed to be in my favor, for on my way home I met a friend who said he had a hen that wanted to sit, that he would sell me, so after putting those I had on some nest eggs, we went down to his place to see what he had. I was not much pleased with this hen, for she was a sort of mongrel Leghorn with blue legs and red eyes, and looked as if she had a temper like powder round a wood fire, but I had to have a hen, so I bought her with the understanding if she did not own the chicks I could return her and get my money back.

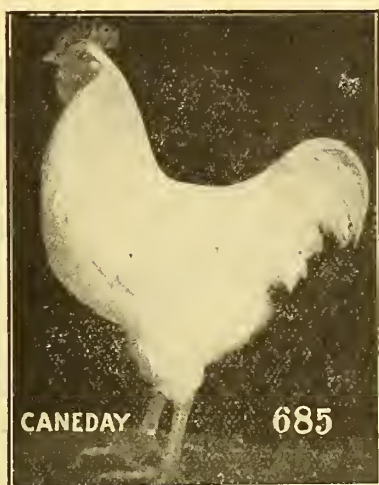

As this finished my broodies I started for the depot, where I found my chicks, all big husky fellows looking none the worse for their ninety-mile ride.

On reaching home I took the lantern and my chickens and started for the henhouse, about as full of hope as it is possible for a young poultryman to be, never doubting for a moment but what

the broodies would be very glad to have a nest full of chicks after sitting two hours on a nest egg in a strange place. But O horror of horrors! such screaming and biting you never saw as those hens made when I held the lantern up and tried to put some of the chicks under them; it seemed as if they had all gone crazy.

To say that I was discouraged would be putting it mildly, for not a hen would let me put a chick under her. After making several efforts I took my chicks to the house, lit my pipe and sat down to smoke and think the matter over. After the second pipe it came in my mind that maybe the lantern had something to do with it that the hens would not own the chicks.

So taking my box of chicks I once more made my way to the fowl house, but this time in the darkness; not a sound disturbed the stillness of the night except the hoarse breathing of

WHITE ROCK COCKEREL.

Bred and owned by Victor D. Caneday, Taylors Falls, Minn.

the fowls. Placing the box quietly on the floor I put twenty chicks under each hen; no screaming or fighting this time, only friendly clucks and little peeps, and in the morning I found three as happy and contented hens as ever waited twenty-one days for a brood of chicks.

Arthur Hoatland.

Cicero, N. Y.

POULTRY CULTURE CHANGES HANDS.

Poultry Culture was formerly published at Kansas City, Mo. A year ago it was consolidated with Western Poultry Review, of Manhattan, Kan., the consolidated paper taking the name Poultry Culture.

This paper has been purchased by Poultry Culture Publishing Company, Topeka, Kan., the company having been formed to purchase and publish the paper. Beginning with the March number, it will be issued in Topeka.

The company is an exceptionally strong one, being composed of Mr. Arthur Capper, of the "Capper Papers," who is claimed to have the largest publishing business west of St. Louis, operating a daily, two weeklies and two monthlies with a total circulation of close to three-quarters of a million; Mr. Geo. M. Crawford, manager of the Mail Publishing House, the

largest printing establishment in Topeka; Miss Mary M. Capper, of the "Capper Papers," and E. W. Rankin, also of the "Capper Papers." Mr. Rankin is known to the poultry fraternity as a fancier, a member of the executive committee of the American Poultry Association, and as editor and manager formerly of Poultry Herald, of St. Paul.

Poultry Culture under the new management will have ample financial backing, and it is the intention of the publishers to make it one of the really strong papers of its kind. With the unusual publishing facilities at command, there should be no question of success.

Beginning with the new season next fall a competent and experienced man will be placed in charge of editorial and business departments of the paper.

A REMEDY FOR DESTROYING MITES.

One tablespoonful of hyposulphate of soda fed in mash (for fifty hens or 100 chicks). Feed three mornings in succession and then feed only occasionally, unless the mites should make their reappearance in large numbers again, which they will not unless the chickens mingle with chickens from infested houses.

A New Oil Lamp

Which burns kerosene, giving a beautiful, soft, yet brilliant light. Turns up and down like gas. Easily cleaned. Absolutely safe. Write for catalogue 59.

ADDRESS DEPT. H

CLEANLINESS IS NEXT TO GODLINESS.

The above was considered an old adage by our great grandfathers, and yet its truth strikes us as forcibly at the present time, as in "ye olden times," especially to those of us who are engaged in the raising of fowls, whether for pleasure or profit.

In no branch of stock raising is cleanliness more essential than in that of poultry raising, and I venture to say, in no branch of the business is it more neglected.

Why is it that the average farmer (and a great many would-be fanciers as well), consider any old treatment good enough for their fowls?

We know that the farmer usually turns the care of his flock over to his better half, and if she fails in her duties the fowls are compelled to shift for themselves. These same farmers expect to figure out almost their entire grocery account from their fowls, and yet we hear them complaining that "the pesky hens don't pay for their feed."

We all know that our fowls will pay for their feed, and something over if given ordinary care and attention. I could write several pages on the subject of care, feeding, etc., but the side of the question which I think of often-

times neglected is that of cleanliness.

If we would give more attention to the sanitary condition of our poultry houses and a little less to the subject of complicated, balanced rations, condition powders, etc., I feel sure we would be repaid by having fewer cases of disease among our fowls.

I am not an advocate of expensive buildings, in fact the less expensive fixtures there are in connection with the poultry house, the more easily it is kept clean and wholesome. In order to succeed in keeping our buildings in this shape we must be prepared to wage a continual war against lice, mites, and filth. I find the easiest method is to keep ahead of the game by giving buildings a systematic cleaning every week, as by so doing it gives these enemies of our flocks no opportunity of securing a foothold.

No matter how careful the attention we give our fowls in the way of feed-

healthy and free from vermin both winter and summer.

The healthy fowl is the profitable one, yet it is almost impossible for fowls to be what I should term healthy if they are infested with vermin and are kept confined in close filthy quarters.

Rainy Lake, Ont. W. M. Jolley.

EXHIBITION BUFF LEGHORN CHICKS.

It is very nearly as easy a matter to select your good Buff Leghorns before they are fully feathered out and developed as it is to count your chickens before they are hatched.

You can, as a rule, get some idea of the hatch by candling the eggs at the various stages of incubation; you can soon pick out the infertile eggs, and after that a few will start and then fail to develop. The rest may all hatch, and again they may all get to the pip-

BROWN LEGHORNS

Yes, they are still in the lead. Large illustrated catalogue free. Eggs half price after June first. **T. E. APPLGATE, Spickard, Mo.**

LIGHTNING LICE MURDER

Will kill all lice in your poultry house within a few hours time, and when Lice Murder gets through with the lice the dead lice will be left in piles upon the floor or drop boards where you can see them. Will the other Lice Killers do this for you? When we kill lice on fowls or in poultry houses we show you the dead lice, in other words, we deliver the goods. Our circular is free; send for it now.

Chas. Schild Co., Box 15, Sta. C, Cleveland, Ohio

Fred Harries, Elmsford, N. Y., and some of his young Indians.

ing, etc., the presence of vermin and filth will more than counterbalance it, and yet we wonder why our fowls do not lay.

Before fowls are put into winter quarters the inside of the house should be given a liberal coat of boiling hot whitewash to which has been added a small quantity of crude carbolic acid. All interior fixtures excepting roosts are treated in like manner. Roosts should be given an application of coal oil and carbolic acid each week while dropping boards should be cleaned at least twice a week (daily if possible).

Each pen is supplied with dust bath composed of road dust, and ashes with a small quantity of sulphur added. Nesting material is changed each week and the coal oil mixture is also used in nest boxes.

To many this may seem unnecessary labor, but I have proved to my own satisfaction at least that it is by far the easier method.

It means only a few hours each week to give buildings a thorough cleansing, and am well repaid by having fowls

ping point and then fail to get out of the shell. So it is with Buff Leghorns after they are hatched. Right at the start you will probably have a few weak or deformed birds which never amount to anything. After that you can tell very little about it except to throw out the few cockerels whose combs fall to one side, those that develop wry tails, deformed beaks or crooked backs. Aside from the few birds which develop the above disqualifications, there is little to do but to sit down and wait.

You can tell absolutely nothing whatever about the color. If a bird has a very decided black or white tail it will never get to be buff, but the color can be quite bad and eventually turn out to be as sound a buff as you could ask for. Those with white tail and wings are less apt to color up than those with dark tails and wings; but even the light colored ones—that is if they have a light smoky color, and not a positive white, will most likely come out all right. Of course I am merely considering well-bred birds—birds that have a right by inheritance to be a solid buff. If you

have the right line of blood raise all the well-formed chicks regardless of their color. Grow them well and keep them in good condition. Don't expect poorly raised birds to be rich in color even if they are well bred.

These few lines are of my experience, and a full grown chick that is promising can't always be picked for a winner until grown and ripe. A handsome peach that is not ripe in many cases looks fine and yellow, but it is the ripe one that we all like; and it is just the same with Buff Leghorns. It is an easy matter to pick out your poor specimens, but fair ones may come better and better. I will say in some cases it has only been two or three days before the poultry show before I would pick out the bird to show; but during the meantime the bird was being put into condition along with eight or ten others.

We hope that every person interested in this popular breed will join the American Buff Leghorn Club, as it only costs \$1, and the benefits are worth five times the cost to the members and the breed.

Geo. S. Barnes.

Battle Creek, Mich.

MARION POULTRYDOM.

I have been a reader of the American Poultry Journal for some time, and surely enjoy reading the articles from contributors, and as a matter of fact I always enjoy any article that pertains to poultry.

I have had no great failure or success in the chicken business, but nevertheless I am looking forward, as there is always room at the top for one more.

We want to advance and have more thoroughbred poultry around Marion County, and in fact all through the Buckeye State.

How one admires, while passing a farm house, a flock of chickens all the same color; whether black, white or any other color, they show that they are thoroughbred and that the owner is moving along with the great multitude of chicken fanciers.

I have always been a lover of poultry, and worked faithfully to prove that there was money to be made from the fancier's standpoint, and became convinced some years ago that there is more money in thoroughbred poultry than in any mixed breed. I invested at that time in the entire flock of Buff Leghorns from a well known breeder and have found it a profitable investment. Some people think that a prize winner cannot be a utility fowl, but I have found that this theory is without foundation.

People who have tried it know it is an easy matter to dispose of all the fancy poultry and eggs that they can produce at five times better profit than from a common bunch of cackles.

Has any breed other than some of the standard bred varieties ever gained a prominent position in an egg laying contest?

Standard bred poultry will each produce from 150 to 200 eggs a year, while a cross bred or barnyard fowl will produce from 60 to 90 eggs a year. The latter will eat as much, cost as much in housing, care and attention as the others. Why any one should continue to keep the common kinds is a problem we are unable to solve, and it is gratifying to know that there is less common bred poultry grown around Marion each year.

At our county fair, fancy poultry was one of the largest, and I dare say one of the most attractive exhibits there.

We are going to have a poultry show this coming winter, and if any one thinks we have not got the quality, all they have to do, is to bump up against us and they will know that they have been to a chicken show equal to the larger cities.

We think that there is no better place to hold this show than Marion, one of the most thriving little cities in the middle west, and one of the richest farming communities in the world.

You will find visitors here from all over the country that have the money to buy thoroughbred poultry and they certainly can't lose on their money.

Frank P. Deem.

Marion, Ohio.

Following the example of Illinois and Kansas, Colorado now is releasing the pheasant, the farmer's friend, and be-

WHITE WYANDOTTE PULLET.

This pullet is a first prize winner and has an egg record of 243 eggs in ten months. Bred and owned by Ira C. Keller, Prospect, Ohio.

fore many years have passed the entire state will have been stocked with them. The pheasant is the chief enemy of the insect pests which destroy grains and fruits and the worms which destroy the roots and bodies of plants.

While the pheasant cannot be domesticated like the common chicken, its eggs can be hatched successfully under the common hen. As soon as they are grown the pheasants will take readily to the fields, there to busy themselves consuming the numerous pests that make the farmer's life most miserable. The greatest benefits are to be derived from the propagation of these birds. They are gorgeous in plumage, the best game bird in the world, and its flesh is considered one of the greatest of table delicacies.

In the aviaries in City Park, Denver, there are several hundred pheasants, introduced by W. F. Kendrick, a wealthy mining man, who will stock Colorado with the birds free of cost to the state. The aviaries are so placed that thousands of visitors see the birds every day, the public thus being educated as to the value of the birds and the methods

adopted in propagating them. In plumage the pheasant rivals the bird of paradise, and it probably is the only game bird that can be successfully reared in captivity.

NEW CHICKEN LAW.

Colorado has dropped into line with Missouri and Kentucky to give the chicken thief his desserts. Gov. Buchtel has just signed a bill passed at the last session which provides adequately for the punishment of those who steal "domestic, imported or game fowl or fowls" in the night time, or who purchase the same knowing them to have been stolen. It is the strongest law in several respects ever passed by a legislature in the United States for the protection of the poultry man, chicken fancier or owner of game birds.

To W. F. Kendrick, of Denver, who is introducing the pheasant into Colorado, is due the credit for the passage of the "chicken bill," so called. He brought the most powerful influences to bear to have the bill taken up for consideration. The newspapers gave him valuable assistance, and, during the closing days of the session, the bill was advanced by special order, taking precedence of 103 other measures whose authors were clamoring for a hearing.

A portion of the law was copied from the Missouri statute upon the same subject, but, in addition, provides that persons found guilty of the malicious destruction of enclosures where fowl are kept, and any person or officers of a corporation purchasing fowl knowing them to have been stolen shall also be deemed guilty of grand larceny.

It would be well, says Mr. Kendrick, for every state to pass such a law, for the poultry business throughout the United States, except in the protected states, has been greatly retarded by lack of protection.

Following, in full, is the act passed by the Colorado legislature:

A Bill for an Act in relation to the larceny of domestic, imported or game fowl, providing a penalty therefor, and that all larceny of the same in the night time shall be deemed grand larceny.

World's Best Buff Wyandottes

At the great Chicago show, 1907, in competition with the best and largest breeders in the country I won first cock, first and fifth hen, 2d and 4th cockerel, first pullet, first pen. Also silver cup for best display and challenge cup for best display Wyandottes in show, all varieties competing. RALPH W. STURTEVANT, DELAVAN, WIS.

HIGH-CLASS COLUMBIAN WYANDOTTES

At Cleveland show we won 1st pen, 1st ckl., (TED.) 3d cock, son of Teddy, 3d hen; at Chicago, National Breeders' & Fanciers' Association Cup for best display of Columbian Wyandottes, National Columbian Wyandotte Club Special for best collection Columbian Wyandottes, Silver Cup, also two best hens and two best pullets in Show, 3d cock, 3d hen, 2d ckl., 4th ckl. S. C. Brown Leghorns

Non-Excelled Strain

For the month of June I will sell eggs from any one of my yards at \$1 per 15. Send for mating list and show record and see what I offer. Breeding stock for sale after July 1st.

A. E. Banta, Box 23, Wheatland, Ia.

Be it enacted by the General Assembly of the State of Colorado:

Section 1. Every person who shall take, steal and carry away any domestic, imported or game fowl or fowls in the night time from the messuage of another, or from the premises upon which the dwelling house of another is situated, and any person guilty of malicious destruction of any houses or enclosures in which fowl of any kind are housed or kept, and any person or the officers of a corporation, purchasing such domestic, imported or game fowl, or fowls, knowing them to have been stolen, shall be guilty of grand larceny, regardless of the value thereof, and upon conviction shall be punished by imprisonment in the penitentiary not exceeding one year, or by fine not exceeding five hundred dollars, or by confinement in the county jail not exceeding ten months, or by both such fine and imprisonment. —Denver Express.

fowls, for dark fowls add copperas to drinking water and cayenne pepper in place of white. Where fowls are yarded the care given is more observable than when on free range. Nature has provided most all needs for producing a desirable molt. Yarded fowls should have fruit and vegetables at time of molt. If a hen persists in laying at the time of losing plumage do not fret or try to prevent it, nature is best all the time. She has to deposit the formation that is in her nature and she may be a laying strain, and nature must have its way. If she rests during the winter months she will lay fertile eggs in early spring. Food has the power of producing fine plumage, it takes its part as well as water, sulphur, iron and linseed oil. A sun bath is as necessary as shade to produce gloss and health. Take a plant and exclude it from sunshine and light and give it food to enrich its brilliancy and it is

yarded fowls and have a grass plot to run on if possible. Keep fowls at time of molt free from all excitement, as excitement tends to weaken them. Meat and bone is good for yarded fowls once a week. Sunshine and light to bring out the brilliancy, and care at time of formation of plumage, for fine feathers help to make fine birds. A brassy white bird is yellow wherever he is put; white birds will be white if kept clean; take unbleached muslin, wet it and put it in the sunshine and it becomes white as snow. Sunshine and oxygen are life to all beings God created; why not use it to advantage and life?

Mrs. M. B. Williams.

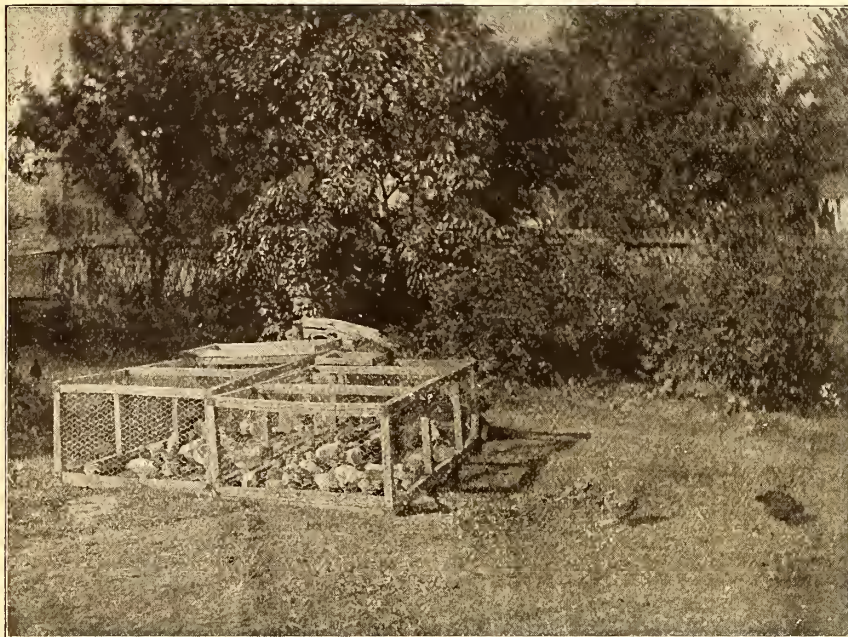

Sali bury, Mo.

ARE FOWLS PROFITABLE?

The attention that is nowadays directed towards the poultry industry causes many people seriously to consider whether they should not keep fowls. The millions of dollars that are annually paid to foreigners for eggs and chickens suggest thoughts as to the advisability of retaining some of the money at any rate in the country. But before embarking in poultry keeping the question naturally arises: Are fowls profitable? The idea still lingers that the ordinary householder who goes in for a few hens will find, at the end of the year, that each egg has cost him about a quarter of a dollar. This is quite erroneous; provided the birds are managed reasonably they should most certainly prove profitable.

Anyone intending to keep poultry, either on a large or small scale, should learn the first principles of breeding and treatment. He must have the house ready before he gets the fowls. He must begin in a small way, starting with a few birds only. When he finds that he understands their management and that they are doing well he can increase his stock by degrees. It is essential to commence with young and healthy fowls. An experienced hand can tell an old bird at a glance, though it is difficult to impart this knowledge to the novice, as no one sign is infallible. Many of the fowls advertised as last year's pullets are much older and would most probably prove unprofitable. So some person who can be depended on should be trusted to supply them; if this can not be done pullets that are not quite grown should be obtained. It requires very little knowledge or experience to tell a three-parts grown fowl from an old hen, whereas it is not always easy to tell a young laying hen from a very ancient one.

The fowls must be fed at regular intervals, the first feed as soon after they are out of the house as can be managed. In small runs and particularly during the winter months the breakfast ought to be a warm meal, only enough for the birds to eat greedily, not a heavy feed. When it can be managed it does the fowls good to have a handful or two of grain, such as wheat scattered in some loose straw, a couple of hours after their breakfast. This will amuse them for a long while and give them healthy exercise in searching and scratching for every grain. Green food is necessary, if possible daily. Before the fowls go to roost they require a good feed of grain, either barley, wheat or corn,

Scene in a back yard of a Canadian poultryman in Wallaceburg, Ont.

PROCESS OF MOLTING.

Just here we desire to say that a good many think the period of molting a dangerous one, but such is not the case; it is a natural operation, not an accidental occurrence, during which the fowls are in a critical condition. We never think of any danger of a horse or cow shedding the hair; this is exactly what occurs when a fowl molts. Nature does not imperil her children in preparing them to be better able to live out their lives and accomplish the purpose for which they live. We acknowledge it is a strain on them after passing through the breeding season, as they have lived through an exciting time. It is not the losing of the plumage that affects the bird, the greatest strain is the formation, as they are full of blood, especially of the large quill feathers. Fowls run down in vitality may develop into some disease and sometimes die.

Give salts in drinking water and a mash composed of oats, corn chop, alfalfa meal, sulphur, linseed oil and white pepper. Feed once a day to white

pale and sickly looking without some sunshine and light to bring out its brilliancy. Iron has a wonderful power in the blood; take the human race, the iron to a great extent produces the freckle. The dark skin man has more iron in his blood than the white man, so it needs to be given to fowls of dark plumage. Keep fowls free of lice and give them clean surroundings, shade and sunshine, feed wholesome grain, grit and charcoal. A dust bath and plenty of clean drinking water and there will be no need of medicine or danger of losing fowls. When the large quill feathers are forming they hunt the sunshine and spread out their wings for the sun bath. The sun draws oil from the body to the feathers and makes them have a more glossy appearance. It depends on what space you have to separate males from hens. To put a lot of cocks and cockerels in the same pen at time of molt much fighting and worry and more damage is done than profit. Give plenty of feed in growing plumage, also exercise. For food give corn, millet, wheat and sunflower seed mixed. Feed twice a day to

AMERICAN POULTRY JOURNAL'S REMARKABLE SUBSCRIPTION OFFER

If your subscription has expired renew at once so as not to miss the next issue, or, if you are not now a subscriber, we want you for one and make you the following splendid offer: For 50 cents we give you one year's subscription to AMERICAN POULTRY JOURNAL. Or if you secure four subscribers (including your own), we will make you the cut price of 35 cents each.

A subscription to AMERICAN POULTRY JOURNAL this year will mean more than ever before. This year we shall do something no other poultry paper has ever undertaken. Every recognized variety of poultry, ducks, geese and turkeys raised in the United States will appear in AMERICAN POULTRY JOURNAL in colors, nearly 300 specimens. Think for a moment of having so valuable a collection of pictures; it is worth many dollars to every subscriber. We call your attention to our beautiful colored covers.

Sometimes a subscriber who has already renewed may receive this blank. That does not mean that the renewal has not been received. We begin to pack in mail bags a week or more before mailing, and the renewal may have reached us after the copy containing the blank has been packed. Remit by money order or stamps (1c stamps preferred). Send at once in order to get all the colored pictures.

only one kind of grain at a time, changed occasionally. It can not be too often repeated that overfeeding is the cause of many small poultry yards proving unprofitable. Young hens, moderate and correct feeding, a plentiful supply of grit and cleanliness in the houses and run, ought to go a long way towards success.

Poultry farming or keeping fowls in large numbers in order to make a living from them frequently results in failure. But these failures are largely attributable to the fact that numbers of people who are ignorant of the practical details and who have already shown their incapacity for other forms of business, have rushed into poultry farming; and, on the other hand, when conducted on commercial principles by those who are well versed in the management of fowls these establishments have proved extremely profitable, and it is satisfactory to find that they are greatly on the increase.

A. V. Meersch.

Poughkeepsie, N. Y.

IN OUR BACK YARD.

This is an article for the back lot poultryman, the one who gets pleasure and health out of keeping a few fowls in restricted quarters. There are many of such who do not get all the pleasure or profit from their flock that can be obtained, and perhaps my experience may help them. There are also many who, if they knew of the pleasure of poultry raising, would take an interest in the work.

A garden can only be enjoyed a part of the year, and I sacrificed mine to build a poultry run so as to have a hobby to work on all the year around.

There has already been so much said about many of the most important phases that I am only going to touch on the things that I think have benefited me and have not been mentioned too often.

One of these is the economizing in room. Put the dust box and nests under the dropping board or the nests

high enough on the wall so as to leave floor space to scatter the grain in. Hang up the hoppers and put the drinking fountain on a board shelf where they can hop up to it and where they can not scratch it full of refuse.

Keep plenty of litter on the floor. Leaves, grass, old pea and bean vines, dried and stored for winter, are good. I have made my hens sing by pulling down the morning glory vines and throwing in the hen house. They soon break up the long stalks and search out the seeds.

In the summer I keep the dirt fresh by turning a patch over every few days with a turning fork. The hens will crowd all over the fork and dirt as I lift it up, trying to get the first worms they will see. They will seize it so quickly that the worm has no time to resist and so get it out whole without pulling it in two.

A few rape seeds sown before the spading begins will sprout and by the next time you turn this same piece over the hens will be as eager for the sprouts as they are for the worms. If you have the room it is a good plan to plant rape to feed green to the fowls. They like it, and it comes up again as fast as cut off if the roots are left. Rape seed can be purchased at any drug store.

"Keep close to nature" is the key to success. In the natural state fowls get the so-called balanced ration, grains, green food and animal matter.

In the winter they should be fed accordingly to produce good results. I don't believe in mashies, etc., as nature gave the birds a grinding mill of their own. There were no grist mills in the jungle. Cabbages, mangels, clover, etc., supply the green food and beef scraps the animal matter.

My fowls are kept healthy and house dry by having an open front on the protected side with a burlap curtain. I always keep them hungry enough, so that they are glad to see me and are active all day long, which improves the circulation and keeps them warm.

As a final suggestion I would say, keep reading. Every time you get your poultry journal sit down and read it from beginning to end, for hidden away in the mass of stuff that may be uninteresting at first are the little gems of suggestions that help make you a practical poultryman. What of it if they are the same old stories, the chances are that there is something that you had heard before but had forgotten, and now it will refresh your memory and perhaps be just what you were looking for.

Lynn W. Shipman.

Gowanda, N. Y.

CARING FOR THE YOUNG CHICKS.

By the time this article is read most every poultryman will have his year's crop of chicks hatched out, but I do not think it out of season to give a few notes on rearing the little fellows. Each breeder has his own methods, which have brought him much success, while on the other hand others' methods are not so satisfactory or a total failure.

Feeding chicks and giving them the right kind of a start is no easy matter and one in which all poultry raisers are much interested. There is as much injury done to the growth of the little chicks as to the skim milk calf, underfed one time, overfed the next, and sometimes not fed at all. A calf is not really stunted or damaged in growth because he is fed skim milk. It is the irregular and improper feeding that stunts him. Young chicks are like the calf. If irregularly fed and not half taken care of you are sure to fail in your attempt to raise them.

Many thousands die each year by improper feeding. Young chicks are more subject to diseases in hot weather than in the earlier part of the season and barring lice and gapes the most common and dreaded disease is bowel trouble. Many farmers will mix up a sloppy mess of raw corn meal, mixed with cold water, and throw it to the chicks once or twice per day and then they will wonder why they lose all

their chicks. Corn meal is a good feed if mixed with hot water or milk and properly cooked, but to feed a sloppy mess of raw corn meal and water is the surest way to produce bowel trouble. The raw meal ferments and sours in the little crop and forms an acid which causes an irregularity of the bowels. Some will afford nothing clean for the chick, overcrowd them and give them impure water. These are all causes of bowel troubles and should be carefully avoided. It is a good plan to put a little lime water in their drinking water as a tonic.

If chickens are worth raising they are worth raising well and should be kept healthy and growing. For the first two or three days I feed hard boiled eggs and oatmeal five times per day and afterwards a chick food mixture. Most of the prepared chick feeds on the market are well balanced and consist of a variety of small grains which all fowls, both old and young, need. If a prepared chick food can not be obtained, feed a variety, corn wheat, etc. The more variety you give them the better, but do not feed one thing continually. Supply your chicks with plenty of clean fresh water at all times and often, for they will drink many times per day. I most sincerely believe that more losses in the raising of chicks are caused by impure water than anything else. Young chicks will drink whenever they see water, whether it be in old stagnant pools or mud puddles. So one should always bear in

mind to keep your chicks well supplied with cool fresh water at all times. If you do not have grass runs for your chicks supply them with some kind of green food. Lettuce, lawn clippings, etc., are excellent. Meat is another important item. If they are yarded they should be given green bone or beef scraps, but if they have free range they will find enough meat to supply their needs. Plenty of sharp grit is always kept before them. Your food and feeding may be all right, but the chicks cannot properly digest their food unless they have grit. Keep your brood coops clean, for filth invites a disease. I clean my coops every week, sprayed with coal oil and carbolic acid to keep away the lice. A few lice will suck the vitality out of the most healthy and strongest chick. If your chicks stand around with closed eyes and drooping wings you may be sure that they are covered with lice. Guard against lice from the time you set the hen, for they are sure to come if you don't.

As soon as the chicks are weaned they should be separated, cockerels from the pullets, and moved to colony houses. Place your colony coops where they can have plenty of shade and grass. Feed them well and care for them and they will grow into large business hens.

Archie E. Vandervort.
Sidney Centre, N. Y.

UNRELIABILITY OF EGGS.

This may seem to some readers to be a worn out subject, but I have had it brought to my notice very forcibly both last spring and again this year.

I started with a few fairly good Barred Rock hens and a cock, but a year ago this spring went to a certain house in Chicago and paid \$3.00 for a setting of Barred Rock eggs from which I expected to get at least a half dozen birds or a trio with which to build up my flock. Well, I took my eggs home and put them under biddy, then began my three long weeks of watching and building "air castles." Biddy was a good mother and stuck to her nest, but at the end of twenty-one days I think she was as surprised and disappointed as was my wife and myself, for no chicks appeared. The next thing to do was to open the eggs and see if they were fertile, so I got to work on this job. What was my surprise to find not a single egg fertile in the unlucky thirteen. "Well," my wife said, "I guess our \$3.00 is gone." I should have gone back to the party that sold me the eggs and stated the case, but in the three weeks that had elapsed the sheriff had had an interview and I had lost my chance.

Of course I talked the matter over with certain of my poultry interested neighbors and found that they had had the same experience as I, but with other parties and at a greater

loss, as they had bought in large quantities for incubators.

When this spring came around I made up my mind I should hunt up some of the poultry yards in and around Chicago and go and see what kind of stock they had, pick out the best to my knowledge, and get eggs from that yard. I spent some time in this way and at last gave my order to a certain gentleman(?) in a Chicago suburb for two settings of eggs. Again I brought them home and got them started, but my hopes did not rise quite so high as the year before, as I still had that failure in mind. However, when I came away from my poultry man's place of business he said, "I hope you will have good luck, and you ought to, as I just brought off a hatch and got 75 per cent." At the end of the time allotted by nature for the process you can imagine my utter amazement and disgust at not getting a single chick, and on opening the eggs to find over half of them not fertile and the rest with the chicks dead at different stages of the game. One of my neighbors has tried still another place this year with the same success.

This is my little experience with fancy eggs and suppose there are others in the same boat. I have no trouble at all in getting chicks from my own and eggs bought from my neighbors.

Why is this seeming neglect of business principle in not turning out first class goods? Is it that those that have got a start in the poultry business are afraid that the amateur is going to get ahead of them? If this is not the case and it is unintentional, why do they not pay some attention to the matter when it is brought to their notice? I suppose there are plenty of others that have had this same experience, but let us not give up and we may get started yet.

Paul Thompson.

Maywood, Ill.

WHY NOT BRAHMROCK?

Kindly permit me, as a subscriber to your most valuable and ably edited paper, to submit a few suggestions through the columns of this department to the originators of the new breed of fowls called by some the "Light Plymouth Rock" and by others the "Columbian Plymouth Rock."

As I understand it this new breed has not as yet been admitted to the "American Standard of Perfection" and therefore its name has not yet been determined upon by the American Poultry Association. Now would it not facilitate matters considerably in case this new breed is admitted if the originators or breeders themselves were agreed upon a name that shall distinguish in years to come their splendid contribution to poultrydom? That they are not agreed is evinced from the two different names already referred to.

It may seem presumptuous to these fanciers for one who is merely a spectator in the wonderful and ever increasing industry of poultry culture, to attempt to dictate so important a matter as the name of the new and beautiful specimen we have under consideration, when there are copious and competent advisers with years of fruitful experience to be consulted. Suffice it to say, however, that in every avenue of

human enterprise the suggestions of the onlooker have very often proved to be fertile. Therefore, kindly let the members of the American Poultry Association and the different breeders of this new bird rest assured that there is no disposition whatever on the part of the writer to dictate, but simply to offer a

tion the following. But first let me explain why. If the originators in question are agreed—as they seem to be—as to the source from which they have selected the characteristics that are to determine what shall constitute the standard requirements for their new specimen, why may they not agree upon the same source from which to select a name other than either of the ones now used for reasons already stated? I believe the standard of requirements is a combination of those for the "Light Brahma" and "Plymouth Rock."

Now, discarding the term "Light" in the one and "Plymouth" in the other of these two names we have Brahma and Rock, the family name of these respective breeds, left. By omitting the "a" on the end of the former and giving the remaining "a" the broad sound, then combining what we have left of the two names, we have a family name for this new and beautiful breed, viz.: Brahmrock. A name that is not only distinctively new but at the same time is suggestive of the origin of the breed and very appropriate. And in addition to all this it is attractive, poetical and poultryal.

It will afford the fanciers ample range for the exercise of their skill and ingenuity by producing birds of this breed in the various popular colors.

Trusting that these suggestions may be received in the same humble spirit in which they are offered, my wish is that this most charming specimen of fowl may ultimately be given an attractive and worthy name.

Ames, N. Y.

WHAT MAKES SUCCESS.

Too many people seem to think that if they get a few chickens and let them shift around the premises for themselves that they are on the royal road to success. Now this is a mistake; there is no more of a royal road to success in poultry raising than in any other industry, it is simply a plain road which we all must travel, beginning moderately and carefully working our way upward, observing closely as we go along all the little things that are so essential in successful poultry raising. There seems to be a tendency to neglect the minor parts, and all these go to make the prize winner. In the first place, you must have a natural liking for poultry (if you have not my advice would be let the poultry business alone), then the situation has much to do toward your success. A light sandy soil is much better than a heavy clay soil, but if you can do no better of course you can have sand and gravel hauled to your grounds at a small expense, and the sharp sand and gravel will benefit your poultry more than enough to pay for the material. Your poultry house and yards in readiness, buy your fowls; be slow in making a choice; do not buy this or that breed simply because some fancier has made a handsome profit from it, but learn to know each breed as thoroughly as possible, decide for what purpose you will raise poultry and then with the descriptions of the different breeds of fowls you can choose those which will best suit your fancy and likely your poultry yards. Buy pure breed fowls, the best are not too good, for in the quality of

the breed lies your success, and if you simply want utility birds the profits of the pure breeds excel the mongrels so far that it is wasting time and money to raise them. Buy of a reliable breeder and you will be apt to get strong, vigorous birds, which you should have to be successful. Examine these birds to see that they are free from lice or mites. A dusting with some good insect powder will not hurt them upon their arrival. Have your coop free from the pests and keep them thus, for poultry can not do justice to their owner and be tortured with these annoying things. Do not forget that the fowls' quarters must be kept clean, for cleanliness is an essential to the health of the fowl as food and water. A fowl can not be continually breathing impure air and long remain in good health, and if the bird becomes diseased from lack of proper care your success will be naught, and then all kinds of vermin delight in filth and will thrive nicely under such conditions, while your fowls go on a strike. And a strike in the poultry yard is a serious thing when eggs are selling at from 20 to 45 cents a dozen, as they very often do, or in the breeding season when everything ought to be booming around our henhouse. We can not be too kind or keep too close a watch over our flock. Learn to know your birds, talk to them, pet them, feed them from your hand and learn to love them. Have them be glad to see you when you come out in the yards, instead of fleeing from you. Do things systematically, feed regularly a variety of food. Keep fresh water and grit always before your fowls; they like a drink of milk occasionally, either sweet or sour; supply them with plenty of green feed of some kind; green cut bone is relished very much and is also profitable. I have followed along these lines and have been successful. Of course there

few suggestions and run the risk of their proving sufficiently fertile as to effect a wholesome compromise of the question, that might possibly result in an advantage to both breed and breeder.

It occurred to me from reading about this particular new breed of fowls in the Journal that one objection that might with good reason be urged against the name "Light Plymouth Rock" would be the fact of its striking similarity to the name "White Plymouth Rock," giving rise, as one can readily see, in not a few minds to no little confusion as to whether the two breeds were one and the same or different, and all the more so where a picture of the bird did not accompany the "ad." Would not this difficulty handicap the creature in its race for distinction?

The main objection that presented itself to my thought in the case of the name "Columbian Plymouth Rock" is the same that might also be raised against the "Columbian" Wyandotte. Conscious of my novice knowledge of poultry I am frank to confess that until I saw a picture of the bird or read a detailed account of it I could not tell what the color markings of a "Columbian Wyandotte" were, always supposing that it was some particular strain of "White Wyandotte." Not happening to know the origin of the breed or the circumstances connected with its name, I found nothing in the term "Columbian" to indicate either its origin or color, whether the bird of that name was red, white or blue, or all three colors combined. Now if this is a reasonable objection—of course poultrymen will be able to tell—to the name "Columbian" as applied to a particular breed of "Wyandottes," why would it not be just as reasonable in the case of the name being applied to a corresponding breed of Plymouth Rocks?

What is the verdict? Does the court sustain the objection? If so, then now is the time to save the cognomen of this new corresponding breed from such an adverse criticism. As a step in this direction I would submit for considera-

are many more things to be said that help to make success, but this article already fills the space.

Mrs. M. H. Merrill.

Lakeville, Ind.

To prevent Germantown wool or other "zephyrs" from shrinking when they are washed, hang the skeins where the steam of the teakettle reaches them.

To clean zinc, wet it over with vinegar, let it remain a few minutes, then wash off.

Paint! Paint! Paint! Leak! Leak! Leak!

There is no reason in the world why you should buy a roof that *needs* painting.

The *need* of painting is *proof* of weakness. It is not the *roof* that protects, it's the *paint*. If you forget to put the paint on, or for economical reasons omit doing so, you have a leaky roof; and a leaky roof is always an abomination.

Amatite roofing requires absolutely no painting or coating of any kind during its life. This diagram below tells you why.

You will notice that the top layer consists of a *genuine mineral* surface that will last as long as the roof, and not only makes painting unnecessary, but gives an amount of durability that is remarkable. It saves you the *cost* of paint and the *labor* of putting it on.

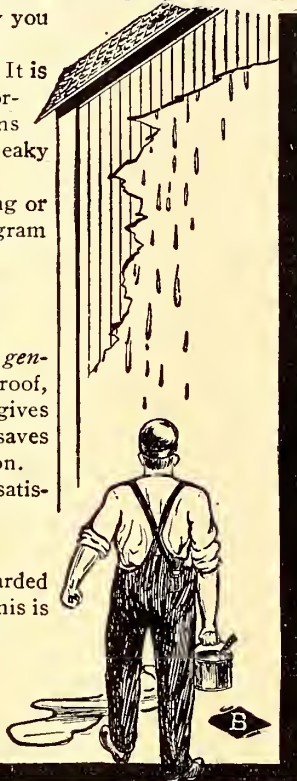

If you want the best, most economical and satisfactory ready roofing made, *remember Amatite*.

EGG TRADE OF THE NORTH.

How Swiftwater Bill Bought Every Egg in Yukon and Smashed Them So His Unfaithful Sweetheart Could Not Enjoy Her Favorite Breakfast Dish.

Complete Display of Poultry Industry in North Will Be Made at Alaska-Yukon-Pacific Exposition.—Big Profit for Raisers in Alaska and Yukon.

By C. H. E. Asquith.

The hen is native to the temperate zone; in the tropics she does not flourish. But in the Northland, called thence by the dietary necessities of a hundred thousand sturdy men, the barnyard fowl flourishes no less prosperously because of adverse and alien climatic conditions.

It was not till about 1901 that the hen was introduced to the Klondike gold fields. Before that day all eggs were imported—often arriving in a very sad condition which necessitated their use as dog-feed. London's story of the man who suicided on finding his eggs bad on arriving in the North is founded on absolute fact. But at the present time there is hardly a camp, no matter how isolated, that has not its rancher with his fresh eggs at all seasons.

It has been planned to have a complete exhibit showing how poultry is raised and cared for in Alaska at the Alaska-Yukon-Pacific Exposition which will be held at Seattle in 1909 for the purpose of exploiting the Northland. A model Alaskan chicken farm with a restaurant in connection, where one may eat eggs laid by hens raised in the Northland or partake of fried chicken, Alaskan style, will probably be one of the features of the displays.

The stories that have gathered about the hen and its breakfast egg, in connection with the north are many, and usually entirely without foundation. It is true that the twenty-four hours daylight during a couple of months of northern summer is not exactly best for the hen. But they do not, as has so often been stated, wander around waiting for the dark to come as a sign of roost time, till crazed from lack of sleep. Nor do they refuse to lay, as has been stated in some irresponsible articles. In fact the hen, with a proper amount of care and with the precautions that will suggest themselves naturally in the prolonged and intemperate winter of the interior of Alaska, will be as prolific and considerably more profitable than the same species in the forty-six states of the American republic.

One of these peripatetic stories concerning the hen in the north is true, and so unusual is it from all stories of a similar kind that it will bear retelling.

It was when that famous character Swiftwater Bill was in the midst of the first of those courtships that linked him consecutively to the three sisters who successively became his wives. Belinda, the first Mrs. Gates, and Bill were about to marry, for at that time Bill's fortune was rated in the millions.

It was before the day of the Dawson hen, and before the White Pass route had made transportation easy. Food, including eggs, had to be hauled laboriously hundreds of miles over the frozen river, and were consequently very expensive.

Eggs were scarce in Dawson. Prob-

KEEP THEM HEALTHY

Don't lose the chicks now. Success with poultry depends not so much on the number of chicks hatched as on the number brought to maturity. They need a tonic—a medicine—a preventive of disease; something to reduce to a minimum the dangers from Cholera and Bowel Complaint, their greatest enemies during the hot months of June, July and August.

GERMOZONE

is a germicide—the best cure for poultry diseases such as Cholera, Bowel Complaint, Chicken Pox, Canker, etc., which cause so much trouble at this time of the year, and is used and endorsed by poultry-raisers all over the world.

Give it in the drinking water twice a week. It prevents disease as well as cures, keeps fowls healthy and insures profitable, vigorous birds later in the season. You can not afford to be without it.

Price 50 Cents. By mail, postpaid, and a copy of our illustrated Booklet, "Mandy's Poultry School" or a 1907 Egg Record, free. Send today to

ably there were not more than five hundred dozen left for twenty thousand people, whose chief diet consisted of that edible. The future Mrs. Gates was especially fond of that breakfast dish. It was at this critical state of affairs that she chose to turn amorous eyes upon another suitor and to quarrel with the renowned and resourceful Swiftwater.

For a night Bill pondered. Then his eyes assumed a grim look as he went to the bank and withdrew a trifle of his fortune, some twenty thousand dollars in gold dust.

There were half a dozen egg dealers in Dawson at that time. To the first of them Bill dropped in a few minutes later and, explaining he was about to go on a prospecting trip and therefore wanted a big supply of food, bought all the eggs in the warehouseman's possession. At the same time trusty lieutenants carrying out his orders acted exactly similarly at the other dealers'. The few restaurants that still had eggs were raided also, and the entire supply was gathered up in one huge monopoly.

The situation was only discovered when the restaurants began to clamor that same day for more eggs. Then one wholesaler sent to another to "borrow a few cases" and after a frantic search it was discovered that every egg in the city was in the possession of Swiftwater Bill.

That afternoon a number of wagons were seen approaching the water front. There in the sight of all Dawson, the eggs were unloaded and were smashed case by case. At the end of a couple of hours there were only three dozen eggs left in Yukon.

The future Mrs. Gates heard of this. And while she was raging—and a good many others were raging too—a message came from the resourceful lover. If she would dismiss the other claimant for her hand, and be faithful to Swiftwater Bill she would have her two eggs for breakfast as usual. And she would be the only individual in the north so honored. It was for this purpose that Swiftwater Bill had saved the remnant of a mighty host.

The girl capitulated. Such resourcefulness deserved reward. Belinda had her breakfast eggs and Bill had his girl whom he soon married—and showed equal celerity in divorcing. And for two weeks longer till the next consignment arrived Dawson cooks and restauraners swore and sweated in an effort to make cakes, pies and pastries to satisfy twenty thousand hungry men, and all without eggs.

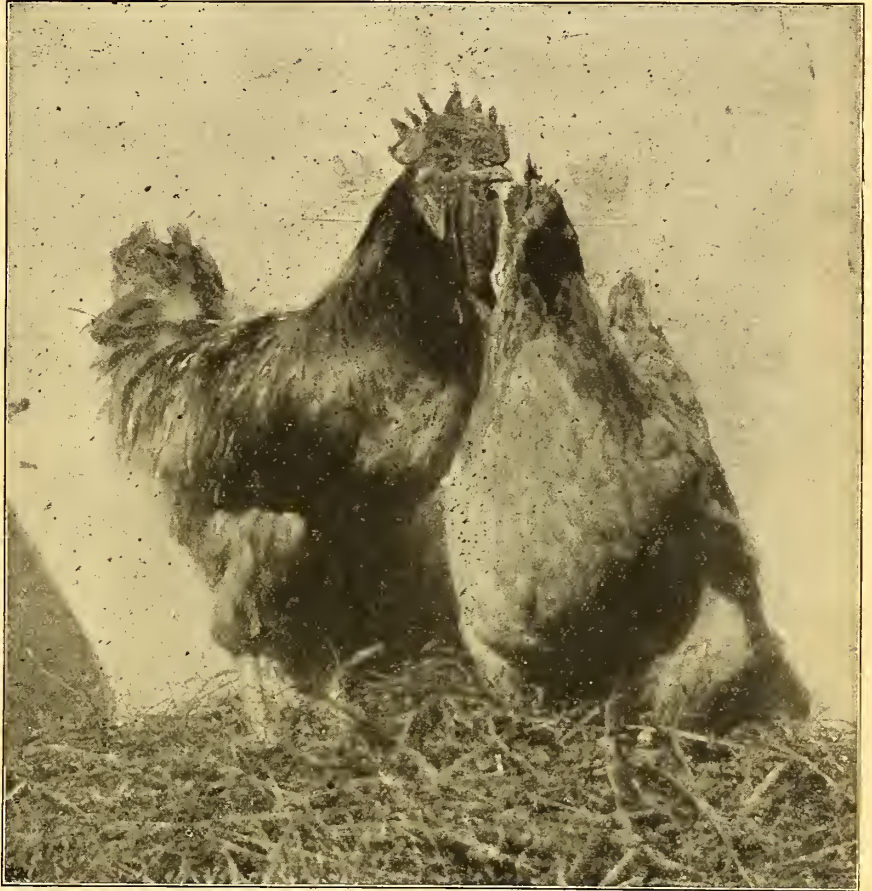

At the present time near all the big Alaskan and Yukon cities are egg ranches capable of supplying the population. The one near Dawson, owned by Wm. Anstett, will have this winter about fifteen hundred laying hens. These eggs are sold at about two dollars a dozen wholesale and are grabbed up as soon as laid. The hens are kept warm in heated sheds. The eggs as soon as laid are stamped with the date, and this date is on them when they are served. When they are to be broken, they are picked out of a dish before the customer's eyes, and he is able to see the date plainly upon them. Thus a breakfaster knows just what he is getting, a rather valuable precaution where three eggs cost a dollar and a quarter.

It is now acknowledged that there is little difficulty in keeping hens in the north so long as they are furnished with

heat in winter. The Alaska-Yukon-Pacific Exposition of 1909 will have, as a portion of the flora-fauna exhibit of Alaska and Yukon, exact information as to the cost, profit, food-demand, and all details upon the importation and death-rate of poultry raising in the north, both for eggs and for meat. The care that is being taken to compile this information will insure that this exhibit, during the four and a half months of 1909, will be one of the most valuable and absorbing to those interested in this trade of all the displays from the North.

a rennet tablet, two tablets to 20 quarts of milk mixed with beef scraps (coarse) twice a week; cabbage before them all the time.

About the middle of October I commenced to feed plenty of clam shells (ground fine). As this section is noted for its fine clams I had plenty for the carting away. When the days were short and the nights were long, as this last winter was, I would feed the pullets in evening after they had gone to roost so they would be up early and go right to work, and that is what I aimed for them

SINGLE COMB BUFF ORPINGTONS.

First prize hen, 1906; first prize cock, 1906, Minneapolis; first prize cock, second prize hen, 1907, Minneapolis; first prize cock, first prize hen, St. Paul, 1907. Owned by the Buff Poultry and Bee Farm, Waltham, Minn.

TO PRODUCE WINTER LAYERS.

In 1905 and 1906 I kept a pen of six W. Wyandottes, 14 B. P. Rocks, 9 R. I. Reds, 21 Brown Leghorns. The B. Rocks were the best layers, so in 1907 I bred all Barred Rocks, hatched 146 chickens and picked out in September 43 of the best, which I thought were, and put them in three pens. When first fed in 36 hours after hatched I gave them hard boiled eggs, chopped fine, with the shells. Then I fed chick feed (Purina) four times a day, with plenty of fresh water and lawn grass clippings; beef scraps twice a week until eight weeks old, and then I fed them cracked corn, barley, cracked wheat and oats and beef scraps regular until I put them in winter quarters in September. Raised some cabbage and sunflowers. Commenced to feed sunflower seed, oats, barley, wheat, whole corn, two quarts to 12 pullets twice a day. At noon I would give them a cheese made from skim milk and

to do. Their litter was composed of dry, coarse gravel, dry leaves, old plants and oat straw, a good dust bath of fine sifted coal ashes and road dust; the roosts were level, and about eight inches apart were bored holes large enough to hold a single moth ball, consequently I had no lice whatever. I kept no roosters in 1905-06-07, and will state for the many readers that we had the coldest winter in 1907 and the warmest in 1906. My pullets were on the ground most of the winter of 1906 and housed all the time in 1907, and yet I produced more eggs this last winter than the winter before. My chicks were all hatched by the 15th of April. Commenced to lay the 23d of November. In December they averaged 16; in January, 31; in February, 31; in March, 26. They cost me 2½¢ a week a pullet to keep.

AN IMPORTANT GRIT EXPERIMENT.

Grit and its relation to the health, productiveness and profit of poultry is a subject which is engaging the attention of poultry keepers everywhere. Its importance as a part of the regular rations for fowls is becoming more and more evident as a better understanding of the part it plays in the fowl's economy is acquired. In this connection it is interesting to note the recent experiment made by Dr. N. W. Sanborn, of Bellingham, Mass. This gentleman, being interested in poultry, and wishing to discover whether the claims made for certain grit in question with his own fowls. The result he states in a letter to the Ohio Marble Co., of Piqua, Ohio. It is substantially as follows:

Bellingham, Mass., April 13, 1907.
Ohio Marble Co., Piqua, O.

Gentlemen: I have been doing a little experimental work with your Pearl Grit. I wanted to see whether your claims for this special form of hen grit were true. With the exception of the month of January, my test covered a period from December to March.

I find that hens supplied with Pearl Grit pass almost no unground grain in the droppings. Hens supplied with Pearl Grit only produce just as good egg shells as do hens furnished with oyster shells and common grit.

I went a step further. I desired to see how the egg shells from Pearl Grit pens compared with those from other pens when tested in the hatching of incubator eggs. As a result of two hatches, during the past four weeks, I can report that I can see no difference in hatchability. The test was made with Buff Wyandottes, line-bred show birds, few of which were outside of the houses during the test.

I congratulate you on the quality of your grit. I am sure if poultry men were better acquainted with it, you would have to "sit up nights" to keep up with the orders.

(Signed) Dr. N. W. Sanborn.

The above letter is a very gratifying proof of the value of Pearl Grit for poultry. Coming, as it does, from what might be called an outside source, gives it additional weight. The experience of Dr. Sanborn is much the same as that of a great many other poultry men who use Pearl Grit and obtain equally good results. Pearl Grit has been and is at present widely advertised as a double purpose article. That it fully bears out the claim there is no question, as there are numerous testimonials in evidence of the fact similar to the one we have published. The little booklet, entitled, "True Grit," published by the Ohio Marble Co., should be in the hands of every poultry man. Copy may be obtained by addressing them at Piqua, Ohio, kindly mentioning this paper.

POULTRY NECESSITIES.

A Word About the Keyes-Davis Co., Manufacturers.

Poultrymen who are in need of any of the devices and appliances that are counted indispensable to chicken raisers these days may very profitably put themselves in touch with the Keyes-Davis Company, of Battle Creek, Mich. This house has come to be considered headquarters for some things that all well ordered poultry yards are using. Their line is not a long one, but they themselves manufacture all the articles they distribute, and these things are unquestionably the best of their kind. There is not an article among them that does not pertain directly to the success of poultry raising.

Of leg bands they make several different styles. Their Climax, Smith Sealed, Double Clinch and Eclipse are all well known. Each has its own claim for preference. The selection to be made depends upon the fancy of the individual user. The company will send samples free so that the merits of each may be rightly understood before ordering. They also make different styles of bands for pigeons.

Among their other articles are the Davis Nickel Plated Poultry Punch, which makes two sizes of holes; single and multiple anti louse roost brackets; the superior Davis food and water fountains and the Davis Sanitary metal nests.

Other concerns of course are selling articles for these same uses. But there

is an opinion prevailing among poultrymen that the Keyes-Davis people, specializing on a few articles and manufacturing these themselves, are getting them up a little better than articles to be had elsewhere. At any rate that is their real ambition, and they have the right notions as to the real needs of poultry raisers to enable them to proceed intelligently. They publish a descriptive circular of all the appliances they manufacture, which they will be pleased to send to any one writing them for it.

MARK YOUR POULTRY.

In these up-to-date times every poultry raiser for many reasons marks his fowls. If you are not doing so you are behind the times; it is so easily done and it takes so little time that there is no excuse for not doing it.

The Poultry Marker may be bought for 25 cents. There are several patterns of these, all of which are made by George P. Pilling & Son Company, Philadelphia, Pa. The original style is called the "Philadelphia Poultry Marker," and is here illustrated. It is made in two sizes, small for the little chicks and large for the other sizes.

Then there is the "Duplex" poultry marker, which consists of a handle into which screws a reversible cutter. On one end of this cutter is a large size hole and on the other end a small size hole, so that there is really two punches in one.

One of the best is called the "Lansdowne Poultry Punch." This is nothing more than a small pattern of pincher, in the end of which is the cutting part.

This is one of the best tools, and as it sells for only 25 cents, every poultry raiser should have one.

George P. Pilling & Son Company will send you one of their illustrated Pilling Fowl Catcher. pamphlets on request. One of the handiest tools on the farm is the "Pilling Poultry Catcher." The illustration clearly explains its use. It is very inexpensive.

This firm also makes a full line of capon tools.

E. T. DeGraff, proprietor of the DeGraff Poultry Farm, Amsterdam, N. Y., has issued one of the most up-to-date and elaborate catalogues that has come to our desk this season. This catalogue contains a very handsome picture in colors of a pair of Rhode Island Reds and many other very beautiful illustrations, besides being full of much valuable information on poultry raising. Send 10c for a copy, it is well worth the price of postage. Mention American Poultry Journal.

Ira B. Sleet, Warsaw, Ky., informs us that he has made a big reduction in prices on both stock and eggs of his noted White Wyandottes. He is now selling eggs at half prices, and has some high class exhibition hens to dispose of, including some first, second and third prize winners. All scoring from 94% to 95%. These birds are all farm raised and are heavy layers. Write him at once if you want to secure a bargain. Mention American Poultry Journal.

J. A. Bickerdike, Millersville, Ill., breeder of pedigreed White Plymouth Rocks, announces a "summer sale" this month. Look up his ad elsewhere in this issue and secure a bargain while they last. Mr. Bickerdike is also manufacturer of the "Superior Trap Nest."

C. P. Brown, Colborne, Ont., will sell all of his last year's breeders of Light Brahmas to make room for growing stock.

HAVE YOU GOT YOURS?

Have you received the splendid free picture of the 1907 Girl? After much trouble and expense, the Sharples Separator Co. succeeded beyond their hopes in reproducing from life, in the softest and daintiest colors, the sweetest dairy maid ever offered by any cream separator company as a free picture suitable for framing and placing in any home. The demand for this excellent picture has been so great that the first lot was quickly exhausted. The Sharples Separator Co. has ordered more and will give you this last chance to get one, free. Send at once to the Sharples Separator Co., West Chester, Pa., the names and addresses of five farmers who keep cows but have no Tubular Cream Separator, and the Sharples Separator Co. will mail to you, in return, the picture of the 1907 Girl, free from printing and large enough for framing. Write the names plainly. Give your own name and address clearly. You must mention the name of this paper to get the picture. The Sharples Separator Co. has a limited number of wall calendars and will send one of them, free, with each picture, as long as the calendars last. If you want both, write at once.

SOMETHING OF INTEREST TO EVERYONE.

There is no kind of roofing quite as cheap in the end as one which can get along without having to be painted. Such a roofing is Amatite. This roofing has a mineral surface, which is much more durable than paint, and as a result Amatite does not need any paint at all. If you have never seen a mineral surfaced roofing, you should inform yourself at once about this latest development in ready roofings.

The manufacturers of Amatite will be glad to send you a Free Sample. Address the nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans, Cincinnati.

American Poultry Journal is now located at 103-113 South Clinton street, Chicago, Ill. Call and see us when in the city.

Have you solved the Rat question? If not, you will be interested in the scientific extermination of rats and mice without the use of traps or poison. On page — of this issue you will find an advertisement of the Pasteur Vaccine Co., Ltd., who are the sole concessionaires of the biological products of the Institut Pasteur, Paris. They furnish a Rat Virus that is harmless to poultry, domestic animals, or human beings, which successfully exterminates rats and mice without any unpleasant results. It will be worth your while writing them for literature.

A. B. Kaye, Walworth, Wis., breeder of S. C. Black Minorcas, informs us that he wants to sell all his last season's breeders, including his Chicago winners, to make room for his young stock. Mr. Kaye is one of the oldest breeders of Minorcas and is state vice president of the American Black Minorca Club. His price of eggs is \$3.00 per sitting, two sittings \$5.00. This is a very low price, quality considered.

Bridgman & York, Box 33, Forest City, Mo., leading breeders of White Wyandottes, state that they have 300 last year's breeders to dispose of. Anyone in the market for exhibition or utility stock should write them and mention American Poultry Journal.

J. S. Haupt & Co., Easton, Pa., breeders of single comb and rose comb Buff Orpingtons, are now selling young chicks for 15 cents and 25 cents each. Here is an opportunity to get first-class stock at low prices.

C. E. Spaul, Box T, Rugby, Ind., breeder of Barred Plymouth Rocks, informs us that he wants to sell all of his last year's breeders, including his Indiana State Fair winners of 1906. In the latter show he won 1-2-3 cock, 2-3 cockerel and 1-2 pullet, first pen. This was accomplished in one of the hottest competitions. He has now in the neighborhood of 500 birds to dispose of. Ask for catalogue and mention American Poultry Journal.

Geo. H. Northup, Raceville, N. Y., the man who knows how to produce Single and Rose Comb Black Minorcas that will bring the highest prices in the world, announces a big reduction in the price of eggs for the balance of the season. Note the following prices: Single Comb Black Minorcas, twenty best pens, \$3 per 13 eggs, \$5 per 30, \$7 per 45, \$13 per 100; special pedigreed Rose Comb Black Minorcas, pens 1, 2, 3 and 4, \$12.50 per 13 eggs, \$25 per 30, no reduction for larger orders; Rose Comb Black Minorcas, six other best pens in America, \$5 per 13 eggs, \$10 per 30. No reduction for larger orders. If you want the best write him today and mention American Poultry Journal.

One of the largest purchases of Buff Rocks in recent years was made when Mr. Edgar L. Delventhal bought from the estate of B. E. Johnson of Kirkwood, Mo., his entire flock of young and old. Mr. Delventhal has some remarkably colored male birds on his farm, and several hundred youngsters, all of that nice even color. He is cashier of the Citizens' Bank at Warrenton, Mo., and state vice president of the Buff Plymouth Rock Club. Any one looking for something good in Buff Rocks will do well to correspond with Mr. Delventhal.

Mr. Charles C. Reid, manager of the Olentangy Poultry Yards, Delaware, Ohio, reports he has a nice lot of breeding stock in Rhode Island Reds, both single comb and rose comb, that he will now dispose of at reduced prices. This is an opportunity for anyone desiring some good Rhode Island Reds, as Mr. Reid has one of the best, if not the best, Rhode Island Red plants in the country. They will gladly mail their new Red Book to any one writing them, also one of their mating lists.

William Miller, Crescent, Mo., has one of the most ideal poultry plants in the west. His specialty is White Plymouth Rocks and no money nor pains have been spared to get the best foundation stock that could be had. Mr. Miller has some good breeding stock to sell at reduced prices and will sell eggs the balance of this season at half price. Write to him for prices.

J. H. Jackson, Hudson, Mass., breeder of the world's foremost White Wyandottes, will have some breeding stock to sell now at reduced prices. Mr. Jackson has furnished the winners for many of the large shows, including the St. Louis World's Fair and Madison Square Garden. He is also breeding the new variety, Columbian Wyandottes.

At the American Poultry Association show held at Auburn last winter, Mr. Joe Coleman of Belleville, Ohio, made the sensational winning of first and second cockerel, first hen and second pullet, with only four entries in the S. C. Black Orpington class. Mr. Coleman will have stock and eggs for sale from now on at reduced prices. Write him for particulars.

Mr. John S. Martin, Port Dover, Ont., made a wonderful winning with his White Wyandottes at the Boston show last winter. It is just the right time to hatch White Wyandottes for the late winter shows, and any one interested may obtain from Mr. Martin, free, his beautiful mating list.

It is hard to find better Light Brahmas than those raised by C. P. Nettleton, Box 1, Shelton, Conn. They are the result of years of careful breeding and have won the prizes at the largest shows, including Madison Square Garden.

The Ohio Hatchery & Mfg. Co., Bellevue, Ohio, have issued a very neat catalogue entitled "Baby Chicks," which they desire to place in the hands of our readers. Send for one and mention American Poultry Journal.

B. S. Hume of French Village, Ill., breeds what he calls the Knox-all strain of White Wyandottes. He is selling stock and eggs at reduced prices and will mail his circular free to all who will ask for it.

Harmon Bradshaw, Lebanon, Ind., Box A, has S. C. White Leghorns that have won prizes all over the country. Write him for his free mating list. Stock for sale now at reduced prices.

"Canada's Best" Buff Leghorns.

Awarded 57 best prizes at foremost 1906 shows, New York, Chicago, The Ontario. Postal brings new catalogue, NATE K. CORNWALL, Drawer A., Thamesville, Ontario, Canada

HALLOCK'S W. WYANDOTTES

Have best show record of any in America. Write for free circular.

ROSS C. H. HALLOCK, 6314 Clifton Ave., St. Louis, Missouri.

Eggs for Hatching

From White Plymouth Rocks, White Guineas, Silver Sebright Bantams and Pekin Ducks. Write for prices to

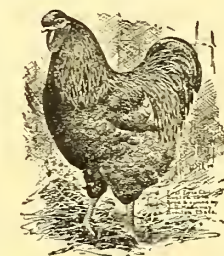

T. R. McDONALD, P. O. Box 302, Winchester, Ky.

Brooder, A Crackerjack Brooder

Chicks cannot crowd, cannot scratch litter into their sleeping quarters; Plenty of fresh air without draft at all times. Catalogue B.

D. K. GROFF, Cerro Gordo, Ill.

HADAWAY'S PARTRIDGE WYANDOTTES

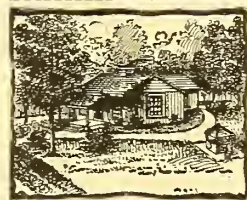

At New York, Boston and Brockton this season won fourteen 1st prizes out of a possible eighteen and all four championship cups in competition with the best birds in the country. The judges say my first pullet is the best ever exhibited. Send for 1907 catalogue. Eggs \$5 per 15, \$8 per 30, \$10 per 45. The Hadaway strain leads all others.

J. B. HADAWAY

696 N. Main St., Brockton Mass.

1st cockerel at Boston, 1906

"SLEEPY EYE" POULTRY AND CHICK FOODS

Prepared from the choicest materials by a scientific formula tested and tried by some of the largest poultry-raisers in America. The Chick Food for the baby chick and the growing chick—the Poultry Food for the older fowls. Old "Sleepy Eye"—the "honest injun" on every sack is a guarantee of honest quality. Write today for free samples and circular in colors. We'll tell you where to buy "Sleepy Eye" Foods.

SLEEPY EYE MILLING COMPANY, Sleepy Eye, Minn.

SMALL BEGINNING BUT GOOD RETURNS.

During the last nine months my experience in raising poultry has been so gratifying that I gladly inform the readers of this paper of my success.

The selection of eggs for the incubator was the most important step. From 110 eggs we hatched ninety strong chicks. One-half went to another person and I kept the other half. I had the "nerve" to give these forty-five chicks to one faithful old hen which I bought for the occasion. You should have seen her spread herself. But it was only for three nights that she could hover the forty-five. A dry goods box was their home and a park 25x50 feet enclosed their range for 1 day until about 5 o'clock, when they were turned into a large yard where they enjoyed green grass and clover until roosting time.

A prepared chick food was given them for several days, then small cracked corn and mixed feeds, as oatmeal and other dry food, for a few weeks. Meat scraps were given them twice a week, clabbered milk once a week and table scraps often.

None died from bowel trouble until eight weeks old, at which time I lost three from feeding too much soft food. At eleven weeks old I sold twelve cockerels at 33 1-3 cents a piece, or \$4.00 for the dozen. My advice to everyone is—get an incubator, start it early in April, so that the chickens may be a good weight and age at the time when the demand is greatest.

In the summer time I would change the drinking water two or three times a day. Perhaps twice a week I would drop in a piece of copper, which acted as a disinfectant. The kind, common sense treatment and regular feeding made them grow rapidly. They were so tame that at any time up to the present they will eat food from our hands. I sold a cockerel recently, weighing nine pounds, and only nine months old. We enjoyed a nice tender chicken every now and then all summer and fall, keeping only fourteen pullets for winter laying. The egg record is surely very gratifying. Oct. 22 the pullets, just six months old, having been hatched April 22, began laying. I received in October eighteen eggs, in November seventy-seven, in December 105, and in January 188. Total for three winter months and nine days of 388 eggs. Besides all we use I sell a good many at 20 to 25 cents a dozen.

I have a colony house eight feet long by five feet wide, with roosts four feet from the ground, dropping board three feet from ground, boxes for nests underneath on ground. This house is built with south glass front, warm and well ventilated, with earth floor. South of the house, in a protected corner which I keep free from snow, the hens enjoy a dust bath on sunny days these winter months. Their food consists of wheat given to them in the morning, scattered in a litter of leaves (which I gathered in the fall). At noon table scraps and barley which has been soaked in hot water for a few hours. About 5 o'clock a little more wheat and one ear of Iowa corn that has been heated through in an oven. I shell the corn for them. I try to give them as great a variety as possible, sometimes giving bran, meat scraps, cracklings bought at the butcher's,

and every other day an armful of alfalfa for green food. Warm water twice a day. A hen requires a great deal of water, for an egg is a large percent water. This January we received on an average of six eggs a day and as many as eleven in one day. Grit and oyster shells are always before the hens.

Although we live in town and have only a town lot, my wife and I are so well pleased with the results of our first trial that we will raise chickens again this year. We are so proud of the record of our fourteen hens in three winter months and a few short of 400 eggs. I advise every young man who has time outside his regular occupation to raise chickens for pleasure and profit.

L. Sydney Lyday.
Newton, Iowa.

UTICA POULTRY AND PET STOCK ASSOCIATION.

The Utica Poultry and Pet Stock Association has just been incorporated under the laws of the state of New York with a capital stock of \$1,000.00 at \$10.00 per share par. This association is the outgrowth of the Central New York Poultry and Pet Stock Association that held such a successful show at Utica, N. Y., in January just passed. It was the intention to continue under the old name, but the state corporation laws would not admit of this.

The association is starting off in a flourishing condition and the fact that the stock is already more than half subscribed for speaks well for it. Many prominent Central New York poultry breeders are numbered among the stockholders.

Plans for the next show, which will be held in Utica during the week of Jan. 13 to 18, 1908, are already under way. Contract for cooping the show has been let to the Empire Cooping Company. No effort or expense will be spared to make this the largest as well as the best show ever held in central New York and to that end the premium list will be made attractive.

A. W. Jones, who so ably superintended the last show will act in the same capacity at the next show, and C. R. Coppel has again been chosen secretary, and they will strive to uphold the motto of the association, "A square deal to all."

The officers and directors for the first year are A. G. Warner, New York Mills, president; A. W. Jones, New Hartford, first vice president; J. Burth, Maynard, second vice president; C. R. Coppel, New Hartford, secretary; W. D. Vosburgh, Utica, N. Y., treasurer.

INDIANAPOLIS IN LINE.

The eighth annual exhibiton of the Fanciers Association of Indiana will be held in the new Colosseum, Feb. 3-7, 1908. This is one of the best show rooms in the United States, located on the site of the old market, in the heart of the city. Most liberal cash and special prizes will be given on all breeds and varieties; every premium guaranteed.

The Fanciers' Association of Indiana are members of the American Kennel Club and a dog show will be held under their management on the same date.

Remember this is an incorporated

association and has sufficient money on hand to meet all obligations. The poultry judges selected are:

James A. Tucker, Concord, Mich.; A. F. Kummer, Butler, Pa.; O. L. McCord, Danville, Ill.; W. C. Pierce, Indianapolis, Ind.; S. B. Lane, Spiceland, Ind.

Premium list out early; send for one. Theodore Hewes, secretary, Indianapolis, Ind.

We are in receipt of "De Graff's Color Plate Book on Reds," and several very artistic calendars from the De Graff Poultry Farm of Amsterdam, N. Y., which are without doubt the highest grade, artistic work ever turned out in the poultry industry.

The cover of his catalogue shows the true ideal color of the popular Rhode Island Red fowls as near to perfection as we could ever expect to see it on paper, and artist A. O. Schilling is to be congratulated on the picture, especially the minute details in showing the farm so natural in the background.

This book contains 40 pages, 8x10, profusely illustrated with pictures from life, showing both fowls and many original contrivances which are in use on this farm only, together with a description of their full line of "De Graff's Original Sanitary Poultry Contrivances."

It is original from cover to cover, and every poultry raiser could gain some information from its contents, while every breeder of Rhode Island Reds can not afford to be without it as it gives his methods of breeding, raising and judging this new breed, besides being the only true colored picture of this breed.

WHY NOT SWAP SKIMMING FORCES?

And have an easier time.

And more dollars for the work you do. You can come near to doubling your dairy profits—perhaps even more than double them—simply by swapping the force of gravity for centrifugal force in the skimming of your milk.

Suppose we get right down to rock bottom regarding this skimming business.

Cream and skim-milk don't separate just to accommodate anybody, but because some force compels them to.

There are just two forces known to man that can be used for the profitable skimming of milk. One is the force of gravity—the old-time crock, pan or can setting system in use ever since man learned how to milk. Let us take a look at gravity systems first and the other and stronger force afterward.

Gravity is the force that pulls every object downward—the force that gives all things weight. The force of gravity does not change. A pound is a pound the year around. When milk is set in pans, crocks or cans, the force of gravity pulls down on every particle of skim-milk or cream the crock, pan or can contains. But this force of gravity pulls harder on the skim-milk particles than on the butter fat particles, so that we say skim-milk is heavier than cream, bulk for bulk. In consequence of this difference in weight, or pull of gravity, the skim-milk settles down and the cream is squeezed up. But not all the cream is squeezed to the top. Some of it fails to rise. There is a reason for this.

When milk is set away in pans, crocks or cans it begins at once to grow stale. One of the constituent parts of milk is the caseine or cheese part. The instant milk begins to grow stale, this caseine or cheese part begins to coagulate or thicken. It first forms a sort of invisible net or web all through the milk and this web grows gradually thicker and thicker until it forms the solid curd or clabber of sour milk. This web cannot easily be detected until it has become very thick, but it is there, even though we do not see it. As this web forms it entangles and holds fast many of the butter fat globules. The force that skims the milk must be strong enough to

pull the entangled fat globules out of this cheesy net or a considerable portion of the butter fat will be left in the skimmed milk and be lost.

It doesn't take a man with much imagination to comprehend that the results he'll get in the skimming will consequently depend very largely on the strength of the force he uses to do the skimming. Realizing this, it is not likely that a man will turn up his nose at a strong force and keep on using a weak one; to do so would be to hug failure and shove success out in the cold.

But how strong is gravity? Is it strong enough to be used successfully as a skimming force, or does its use result in direct, positive, twice a day loss of cream in skimmed milk to every farmer or dairyman who uses it? These questions are wedged right under your bank account. Since the success or failure of your dairy depends upon yourself, hadn't you better give these questions some pretty careful thought?

Gravity is weak. Being weak, its effect is slow. Being slow, it allows the caseine net to form. Gravity is not strong enough to prevent this caseine net from entangling and holding down part of the cream.

Because it is weak and slow, gravity must be allowed, say, twenty-four hours to skim a batch of milk. And all that time the milk and cream are standing round taking up odors from the air, growing stale or sour, and the fat entangling caseine web is getting in its work to your loss. The result is bad in every way. The loss of cream frequently amounts to from one-third to one-half; the other third or half is left in the skimmed milk and goes to make six-cent pork or veal instead of twenty-five to thirty-five cent butter. The cream that is secured will be off flavor, the butter will show the effect, and stale or sour skimmed milk is not the best sort for your young stock, even though such milk be warmed before feeding. In this way gravity causes the dairyman a great falling off in quantity and quality of butter and in the value of the skimmed milk. This figures up a heavy cash loss in a year.

Gravity is a hard task master. It entails much needless work upon dairymen. When gravity systems of skimming are used, there are all the pans, crocks or cans to be filled and set away twice daily; later, they must all be brought out, skimmed, emptied and washed; also, the cold skimmed milk must be warmed before feeding if the farmer desires to avoid bad results in his calves. All this takes time and strength—both of which should count as part of the expense of operating the dairy.

These are some of the many reasons why the use of gravity systems of skimming are unprofitable and unsatisfactory.

Is it any wonder that the dairyman who uses a gravity system fails to make dairying pay?

You have often watched mud flying off a running wheel; you have doubtless frequently whirled a pail of milk or water about your head without spilling a drop; you have probably tied a stone to a string, whirled it about a few times, and sent it sailing much higher and farther than you could throw it with your arm; you have read how David slew Goliath, the Philistine giant, with a sling; you may have watched the automatic steam regulator which controls the steam supplied to various sorts of steam engines; in each instance, centrifugal force did the work.

Centrifugal force is the power that

makes whirling bodies pull away from the center about which they are whirled. When a vessel containing milk is rapidly spun around, top like, centrifugal force is generated and pulls outward on the particles of skim-milk and cream. But centrifugal force, like the force of gravity, pulls harder on the skim-milk particles than on the cream particles so that the skim-milk is drawn outward against the sides of the vessel and the cream is squeezed inward toward the center. Add to this spinning receptacle proper driving mechanism and proper tubes for drawing off the skimmed milk and cream into separate vessels, and you have a centrifugal cream separator—a machine that separates cream and skim-milk by the use of centrifugal force.

The most interesting and valuable characteristic of centrifugal force is this—its strength or power can be increased as greatly as necessity requires. That is the great advantage centrifugal force

rescues the imprisoned butter fat particles.

So what will you gain in dairy profits by using centrifugal force, as applied in the centrifugal cream separator, instead of some gravity system in the form of pans, crocks or cans?

(1) A skimming force which may be made ten thousand times as strong as gravity, the amount of force depending upon the make of cream separator you select.

(2) A gain of one-third to one-half—sometimes even more—in the quantity of butter you get from the same amount of milk under the same conditions, the amount of increase depending upon the kind of separator you select.

(3) A gain in butter quality that will usually run from five to ten cents per pound, according to local conditions, the increase in quality depending partly upon the simplicity of the separator you select.

(4) You will have fresh, sweet skimmed milk, still warm with the heat of the cow, which will be much better for your young stock than the stale, sour or diluted skimmed milk from pans, crocks, cans or creamery.

(5) You will have a single can of cream to set away or haul to the creamery instead of several crocks, pans or cans of whole milk to care for, and your trips to the creamery will be decreased by at least one-half.

(6) You will require less storage room, less ice and practically no pans, crocks or cans, thereby greatly reducing the cost and labor of handling milk and cleaning milk utensils.

Do not make the mistake of thinking that the man who hauls his whole milk to a creamery and carries the skimmed milk back has solved the problem, for this man gives—wastes would be truer—his own time and the time of his team and wagon in making his daily trip. Every pound added to the load he hauls sinks his wheels so much the deeper into the mud or wrings the sweat so much the more freely from his horses. He must haul one load each way every day. In addition, he man who takes skimmed milk home from the creamery gets a stale article, diluted with washings, which may be the means of introducing into his stock tuberculosis or some other disease which afflicts some neighbor's herd.

Should any of our readers desire more knowledge on this subject, we suggest that they write for a copy of a very useful book called "Business Dairying," which the Sharples Separator Co. offer to mail, free, upon request. This book will benefit you and explain much more fully the actual cash advantage to be gained through exchanging your gravity system of skimming for a centrifugal cream separator. Be sure to mention the name of this paper when writing for this book, thus insuring the very promptest attention to your request.

THE JOYS OF WHEELING.

A beautifully illustrated catalogue of bicycles that has just reached our desk fills us with a longing for a spin in the sunshine and open air along some pleasant country road. This attractive and complete catalogue of wheels describes many new improvements, such as the New Improved Coaster Brake, puncture proof tires, and high grade bicycles at surprisingly moderate prices, ranging from \$12.00 to \$25.00. It also contains general information and statistics that should prove interesting to every bicycle rider. Our readers can obtain this interesting catalogue free by writing to the Mead Cycle Company, Chicago.

BUFF COCHIN FEMALE.

Bred and owned by H. N. Hanchett, Jackson, Mich.

has over the unchangeable weak force of gravity. Centrifugal force can be made strong enough to do perfectly and almost instantly what the force of gravity does incompletely and slowly.

Imagine the great advantage to you of a skimming force ten thousand times stronger than gravity. The centrifugal cream separator here shown is said to be the most powerful skimming machine known, exerting upon milk a centrifugal force actually ten thousand times stronger than the force of gravity. This amount of centrifugal force is so great that it can easily wring the last drop of cream from the milk so quickly that the skimming of the entire milk from an ordinary herd may be finished, the single can of cream set away to cool and the skimmed milk fed to the calves before the skimmed milk can grow cold.

This centrifugal force, being actually ten thousand times stronger than the force of gravity, does thoroughly, and almost instantly, the skimming that gravity would do but imperfectly in twenty-four hours. The gradual growth of the caseine web, which so seriously interferes with gravity systems as to cause them often to leave one-third to one-half the butter fat in the skimmed milk, does not interfere with a centrifugal force ten thousand times stronger than gravity. This great force easily breaks up this web in stale, cold milk and
